The 2012 Statistical Yearbook uses a new publication format, promoted by the FAO Statistics Division. It goes beyond the traditional compilation of tables by including more graphs, maps and text, highlighting the main trends and issues observed in the data. This new format responds to new demands for a more comprehensive set of statistics and indicators that provide a broader and more in-depth examination of the various roles of agriculture.

This edition responds to the specific needs of African users by providing indicators for each country as well as aggregate indicators for Regional Economic Communities and for the entire African continent. Indicators for other regions of the world are presented for easy comparison.

We hope you will find this book informative and useful.
