JOINT FAO/WHO EXPERT MEETINGS ON MICROBIOLOGICAL RISK ASSESSMENT (JEMRA)

Roster of Experts

(As of 26 January 2023)

JEMRA is an international meeting of scientific experts administered jointly by the Food and Agriculture Organization of the United Nations (FAO) and the World Health Organization (WHO) to provide scientific advice on microbiological hazards including recommendations on risk management options aimed at improving food safety. JEMRA is tasked with the evaluation of different aspects of microbiological risk assessment throughout the agrifood system.

This roster includes the names of scientific experts selected following public calls for experts on risk assessment of microbiological hazards related to food safety. All applications to the call were reviewed by the FAO/WHO Secretariat and by external referees, and selections were made on the basis of the criteria outlined in the call for experts. Scientists from the roster will be considered for future meetings of JEMRA according to the expertise required for the respective meetings. Inclusion in the roster does not guarantee such participation and other experts, not included as part of the roster, may also be selected to participate.

Before participating in meetings, selected experts will be required to declare any potential interests associated with the subjects under consideration through completion of the standard declaration of interest form of either organization.

When making selections for individual meetings, a balance of scientific expertise, gender and geographical representation will be considered. Yet, all experts will be expected to participate in their individual capacities and not as representatives of their countries, governments or organizations.

The roster is dynamic and will be updated periodically. Experts are included in the roster for an initial period of five years and new experts will be added if specific expertise is required for a meeting.
