

Introduction to rift valley fever open-access training course

This self-directed online course is of interest to both public and private veterinarians and veterinary paraprofessionals working in countries that are either endemic or at risk of rift valley fever (RVF) epizootics.

The course has a mobile-first approach, and can be studied on a smartphone, computer or tablet.

The course covers

- RVF aetiology and pathogenesis
- RVF infection in humans
- Clinical diagnosis and laboratory sampling
- RVF epidemiology, outbreak investigation and surveillance
- RVF prevention and control measures
- Communication with stakeholders and the general public.

✓ The overall course provides a comprehensive introduction to RVF. It includes a wealth of additional reference material and case-studies that you may access anytime. Each one of the 14 modules is designed to be a standalone learning opportunity.

✓ You should self-register for this course.

✓ At the end of the course, you must complete an assessment to receive a certificate.

**This is a three-hour course,
that you may complete at
your own pace.**
