DIGITAL VILLAGES
in Europe and Central Asia

The Digital Villages Initiative (DVI) is a flagship programme of FAO that aims to transform at least 1000 villages around the world by empowering rural communities to harness digital technologies to:

**BOOST agricultural PRODUCTIVITY**
Deploy various modern technologies to enhance agricultural production, including smart sensors, precision agriculture tools, and geospatial-based platforms.

**Enhance ACCESS to SERVICES**
Deliver advisory and financial services to farmers digitally, connect producers with buyers online, and diversify farm economic activities by digitally promoting agritourism.

**UPLIFT rural LIVELIHOODS**
Foster a holistic digital rural transformation beyond the agrifood sector, in areas like health, transport, and energy.
