

SmartForms

A mobile app platform to collect and review fishery and observer data

- Easing data collection in the field in support of sustainable fisheries.
- Users: fishers, observers, citizens, projects stakeholders, etc.
- An **open source** infrastructure to collect, validate, amend, archive and share fishery data.
 - **Pushes harmonization** by using preloaded international statistical standards with mapped regional or local standards.
 - **Configurable** as every organization/project securely collects fishery data through the Forms to which they have been authorized access.
 - Suitable for field, landing sites and on-deck data collection (**mobile-first**).

HOW IT WORKS

As a do-it-yourself platform for scientific observers and fishers
