

# Applying Public-Private Partnerships to control Foot-and-mouth and Similar Transboundary animal diseases training course

This course provides a unique opportunity for those in public and private sectors to work together. It is suitable for colleagues in public veterinary services, in particular, those who are involved in designing and implementing Foot-and-mouth And Similar Transboundary animal diseases (FAST) control plans; and those within legal, finance and planning departments within the Veterinary Services.

The course is also relevant for private sector stakeholders with interest in involvement in activities related to animal health and specifically control of infectious diseases of livestock; for national and regional associations of farmers, veterinarians, paraprofessionals, pharmaceutical and vaccine producers, distributors, companies and non-government organizations.

### The course covers

- How to conduct an analysis of opportunities for PPP for FAST control in their country, in which existing PPPs, stakeholders, and demands from the public and private sectors are mapped
- Developing the outline of a business case for establishment of a PPP to address a FAST disease in their country
- Developing a national/sectoral action plan for the establishment of an enabling environment for public and private sector collaboration in FAST control.

✓ The course includes a combination of live online meetings, interactive online modules, video recordings and assignments. A series of guest contributors will share their experience of PPP in the online discussion forum.

✓ Participants will complete some activities individually, and some as a group with others from their country.

✓ The course is a joint collaboration between the EuFMD, the OIE and the CIRAD.

**This 12-hour course is open for four weeks.**
