3		The global net capital stock in agriculture, forestry and fishing increased from USD 5.1 trillion in 2013 to USD 6.5 trillion in 2023, corresponding to an average annual growth of 2.6 percent, slightly lower than in the previous decade (2.7 percent) (Figure 2).	The global net capital stock in agriculture, forestry and fishing increased from USD 5.1 trillion in 2013 to USD 6.9 trillion in 2023, corresponding to an average annual growth of 3.1 percent, slightly higher than in the previous decade (2.7 percent) (Figure 2).
3		Asia and Africa recorded the highest increase of net capital stock between 2013 and 2023, from USD 2.4 trillion to USD 3.6 trillion (an average annual growth of 4.0 percent) and from USD 0.34 trillion to USD 0.42 trillion (2.2 percent), respectively. The Americas and Oceania followed, showing increases from USD 0.90 trillion to USD 1.1 trillion (1.9 percent) and from USD 0.13 trillion to USD 0.14 trillion (0.9 percent), respectively. Europe had the second largest net capital stock among all regions, but its increase from USD 1.26 trillion to USD 1.27 trillion (0.1 percent) during the period was the lowest.	Asia and Africa recorded the highest increase of net capital stock between 2013 and 2023, from USD 2.4 trillion to USD 3.7 trillion (an average annual growth of 4.4 percent) and from USD 0.34 trillion to USD 0.48 trillion (3.5 percent), respectively. The Americas and Oceania followed, showing increases from USD 0.90 trillion to USD 1.2 trillion (2.7 percent) and from USD 0.13 trillion to USD 0.14 trillion (1.2 percent), respectively. Europe had the second largest net capital stock among all regions, but its increase from USD 1.26 trillion to USD 1.33 trillion (0.6 percent) during the period was the lowest.
3	Figure 2		4		In the last three years, the growth of the global net capital stock in agriculture, forestry and fishing was 0.79 percent on average at the global level, far below the trend of the last decade. This is due to a general decrease in all regions except Asia, stemming from the lack of investments during the COVID-19 pandemic and the simultaneous depreciation of the existing agricultural stock. Africa recorded an average annual decrease of 3.3 percent, followed by Oceania (1.4 percent). The average annual decreases recorded in Europe and the America are much lower, with values of 0.55 percent and 0.26 percent, respectively. On the other hand, Asia is the only region with a positive average annual change, of 2.2 percent.	In the last three years, the growth of the global net capital stock in agriculture, forestry and fishing was 3.56 percent on average at the global level, slightly higher than the trend of the last decade. This is due to a general increase in all regions except Oceania, due to a rebound of investments after the COVID-19 pandemic which compensated the depreciation of the existing agricultural stock. Asia recorded the highest average annual increase of 4.4 percent, followed by the Americas (3.3 percent) and Africa (3.2 percent). The average annual increase recorded in Europe is much lower at 2.1 percent, while Oceania is the only region with a negative average annual change of 0.1 percent.
