

Building a common vision for sustainable food and agriculture

©2011 CIA/Neil Palmer

This course examines the common vision and integrated approach to sustainability developed by the Food and Agriculture Organization of the United Nations (FAO) to deal with current and future challenges facing agriculture, forestry and fisheries. It presents the five key principles for sustainability in which this vision is embedded and illustrates the actions to enhance transition to sustainable food and agriculture.

1.5 hours

Available in English

You will learn about

- Challenges facing food and agriculture.
- FAO's vision and integrated approach towards sustainability across agriculture, forestry and fisheries.
- Five interconnected principles for the transition to a sustainable agricultural development.
- Programmes and frameworks underpinning actions towards agricultural sustainability.

Who is the course for?

The course is aimed at policy makers, decision makers and policy advisors in the areas of agriculture, forestry and fisheries, and at professionals interested in sustainable agriculture and food systems.

Key partners

The Food and Agriculture Organization of the United Nations (FAO) has developed the contents and conducted the design and development of the course within the context of the Strategic Programme on Sustainable Agriculture.
