

# CODEX STANDARDS & ANTIMICROBIAL RESISTANCE

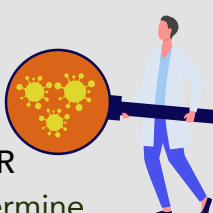

©FAO, 2020  
CB2101EN/11.20

Antimicrobials are important for healthy animals and crops but overusing them or using them inappropriately can lead to antimicrobial resistance in the food production environment and in our food. This presents a risk to consumer health, food trade and livelihoods.

## APPLYING CODEX ALIMENTARIUS STANDARDS AND GUIDELINES CAN MINIMIZE THIS RISK

**Codex Guidelines for Risk Analysis of Foodborne AMR**

assess and determine how to manage and communicate the risk

**Codex General Principles of Food Hygiene**

ensure food is produced hygienically

**Codex Maximum Residue Levels**

ensure veterinary drugs and pesticides are used appropriately

**Codex Code of Practice to minimize and contain AMR**

help ensure antimicrobials are used correctly
