12 May International Day of Plant Health

Plant health took center stage around the globe as over 40 countries came together to observe the second International Day of Plant Health (IDPH) on 12 May 2023.

In the month leading up to the day, activities reached more than 34 million people worldwide. Virtual webinars and plant health clinics educated communities on protecting plants from pests and diseases. Schools organized plant health outings and activities to teach children about the importance of plant health in an engaging way. Cities hosted plant health parades and rallies to raise public awareness for this critical cause.

From Australia to Zimbabwe, the plant health community found creative ways to spread the message that healthy plants mean a healthy environment, healthy communities and a healthy economy.

This year’s IDPH commemoration was a resounding success, sparking a global movement to make plant health a priority in communities everywhere.

The future looks green and thriving.

The following 40 countries observed IDPH 2023
