

Measuring the role of forests and trees in household welfare and livelihoods

© FAO

The e-learning on the 'National socioeconomic surveys in forestry' comprises four courses that aim to provide guidance on the use of forestry modules to collect data on the socioeconomic contributions of forests and non-forests environments to household welfare and livelihoods.

This course introduces the definitions related to forest and wild products and describes the various methods and issues relevant to the forestry modules.

45 minutes

Available in English

You will learn about

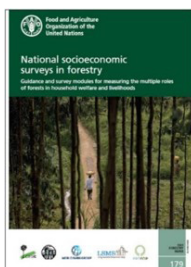

- Forestry-related definitions and categories of forest product and income
- Some key data collection methods and issues

Who is the course for?

This is one of four courses in the e-Learning on the 'National socioeconomic surveys in forestry'. It is primarily intended for people who are involved in data collection, analysis and reporting in organizations such as: National statistical offices, government agencies, donors, non-governmental organizations, forestry departments and research organizations.

Key partners

This course is based on the publication 'National socioeconomic surveys in forestry', which has been developed by the Food and Agriculture Organization of the United Nations (FAO) in collaboration with the Center for International Forestry Research (CIFOR), International Forestry Resources and Institutions Research Network (IFRI) and World Bank.
