COMMODITY update

The COMMODITY UPDATE reports, issued for each commodity once a year, contain information on prices, imports, exports and production by commodity. The information is taken from the network of GLOBEFISH correspondents and the GLOBEFISH European Price Report, INFOFISH Trade News, FAO FISHSTAT PLUS, EUROSTAT and others.

The issues are scheduled approximately as follows:

For **single issues**
please contact

For an **annual subscription** to
the complete set please contact

Shrimp markets slump in Europe and oversupply of vannamei pushes prices lower

This year the global production forecast for aquacultured shrimp is unlikely to meet the targets set in many countries, while overall price levels and market demand remained weak from January to October. However, there have been some successful efforts in developing domestic markets in the producing countries, including in India.

Supply

As the end of this year's farming season approaches, harvests in most of the producing countries seem to be below the 2012 targets. In Viet Nam large farming areas in the Mekong Delta have suffered from severe crop losses throughout the season, linked to shrimp diseases and cash flow problems. The processing sector has had to import raw material from Thailand and India to fulfil their commitments with buyers; imported shrimp seemed to be cheaper than domestic raw material. By the third quarter of the year, production has also slowed down in Thailand, Indonesia and India for various reasons.

The large production and volume on offer of vannamei shrimp from India has had a negative impact on shrimp prices, as there has been no real recovery in the commodity market. By late September, Indian farmers cut back vannamei production because of the substantial weakening of market prices; poor harvests are also linked with lower quality seeds in the hatcheries. The situation is even worst for black tiger aquaculture now restricted to Orissa and West Bengal and Indian black tiger shrimp is facing strong competition from its own large supply of vannamei.

Falling international prices have also affected Thailand, although the government assistance programme helped to stabilize ex-farm prices in middle of the year. Shrimp farming has become more challenging to Thai farmers because of the availability of cheaper products from India and elsewhere.

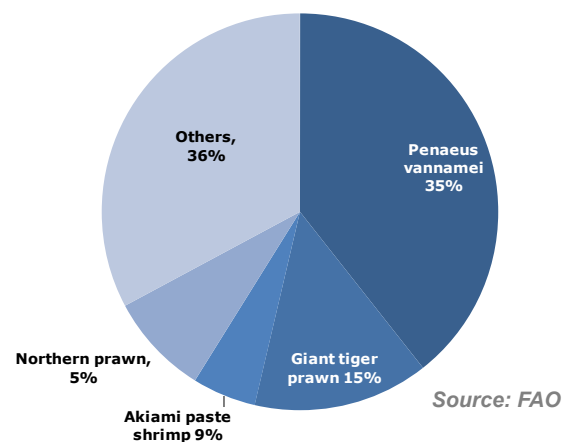

With declining demand in the major markets, Indonesia lowered its production target to 300 000 tonnes for 2012 and the government is promoting shrimp in the domestic market.

Falling market prices have also affected Latin American production but to a lesser extent.

International Trade

Throughout the year, shrimp prices have remained essentially weak in international trade but this did not help to boost consumer demand in the two large markets - the USA and the European Union. The trend has been slightly different and more positive in Japan. Cheaper

Shrimp production by main species (2010)
(in tonnes)

availability of raw material has also created extra trade among the Asian regional markets for export processing and local consumption.

Japan

The Tokyo Metropolitan City office reported that frozen shrimp sales at the Tsukiji wholesale market increased by 17% (7 000 tonnes) during the January-

August period compared with the same period last year. This was the result of a 7% drop in wholesale prices against last year's, following the decline in international market prices.

In preparation for autumn and winter sales, wholesale trading had started to improve by early October. In contrast, imports have slowed down from India and Viet Nam has been linked with the ethoxyquin issue in farmed shrimp. This has created extra demand for shrimp coming from extensive farms in Myanmar and Bangladesh that are not raised on industrial feed containing ethoxyquin.

Taking advantage of lower shrimp prices, supermarkets are planning to run promotional campaigns on vannamei shrimp, which will favour Thai and Malaysian vannamei. As a result of the ethoxyquin scare, large sized Indian vannamei will not be part of this marketing campaign. Imports from India declined by 40% in August compared with the same month last year.

Demand for Argentinean seabob shrimp (head-on) has also gone up in the Japanese market as a result of improved supplies and affordable prices. Many households and restaurants have started to use it for cooking nabe (pot boiled) dishes, popular during the cooler season. The market for head-on black tiger shrimp is currently taken over by the cheaper Argentinean shrimp.

There are also clear indications of waning consumer demand for raw shell-on shrimp in the Japanese market. Cumulative imports of all types of shrimp during the first eight months were nearly 172 000 tonnes. Compared with last year, imports of raw frozen shrimp (shell-on and peeled) remained almost flat (<1% increase) during this time, whereas imports of processed shrimp increased, taking a 28% share in total shrimp imports. Demand for salad shrimp has also gone up in the market, as well as imports of cooked shrimp, both coldwater and tropical.

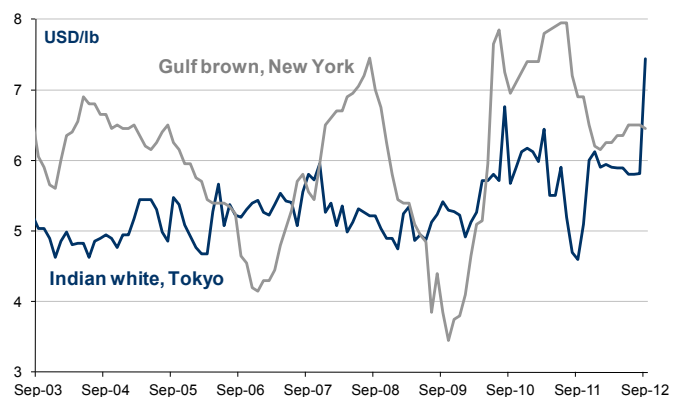

USA shrimp market

USA imports increased during the first half of the year because of speculative demand by importers, which have proved problematic for the rest of the year.

Despite some swing in supply and spot improvements in demand, the market is characterized with quiet demand and abundant supply.

The large production of vannamei in India has had a remarkable influence on the whole complex of the US shrimp market. Supplies coming from the other Asian sources (Indonesia, Viet Nam and Thailand) are facing

Shrimp prices (16-20 count) in main wholesale markets, USA and Japan

these effects, as their prices have had to decline to remain competitive with Indian products. "US customers have tightened their spending and turned to cheaper

shrimp imports from India, Viet Nam and Indonesia", said Thai National Shippers' Council (TNSC) Chairman Mr. Paiboon Ponsuwanna. Average farmed shrimp prices from Thailand are 10 to 20% higher than its competitors and Thai shrimp exporters are losing market share in the USA.

Source: US Department of Commerce, Bureau of Census

In anticipation of a large influx of shrimp on the US market, importers were forced to lower their prices so that remaining inventories could be cleared. This was the only way that shrimp from other Asian origins could compete in the segment of value-added products. In terms of market prices, both black tiger shrimp and Latin American whites have been affected by substantial supplies of Indian vannamei.

Taken overall between late March and early October, the wholesale price of a number of shrimp products clearly shows a negative trend. Some imports, such as Latin American cultured vannamei, have retained their value, but on the whole the downward trend is a clear sign of a weakening market.

On the supply side, the consensus is that there are sufficient supplies in the market, with considerable increases in both imports and domestic landings. However, the weakness of the US dollar against other strong local currencies is a factor that has affected purchases, because exporting countries are asking higher prices for their products.

The outlook for the US restaurant sector seems to indicate that consumers are becoming more cautious again, as recovery from the economic crisis remains slow.

Nevertheless, the US remains the important market focus for many producing countries, given the worsening economic situation in the Eurozone and the reported lower buying interest in raw frozen shrimp from Japan.

EUROPE

Waning consumer interest has badly affected EU shrimp markets. Consumers have cut back spending as confidence is reported to be at a 40-month low in September this year. Throughout the summer, the market was very weak and sales declined both in the retail and catering sectors. Many shrimp importers complained that they have been struggling to recover their money from retailers. The weakness of the euro against the US dollar also contributed to the depressed demand.

With this scenario, European buyers looked for cheaper sources. For black tiger shrimp, European buyers were attracted by the cheaper products offered by Bangladesh because this country has GSP status and therefore zero import duty. Some buyers have also opted for cheaper vannamei, mainly from India, which has also put pressure on the black tiger price.

The weakening shrimp demand can be seen in declining shrimp imports into the EU-27. During the first half of 2012 shrimp imports posted negative growth of almost 11% on a year on year basis. Imports from third countries (extra EU trade) dropped by 10.8%. Ecuador retained its first position as the number one supplier to the EU, even though its shipments were 9.5% lower this year. Double digit drops in supplies were recorded from Greenland (-18.2%), Thailand (-13.6%), Viet Nam (-23.9%) and Bangladesh (-10.3%); while imports from India declined by 8.7%.

In the EU's major markets shrimp imports were

Meanwhile, shrimp imports into the UK declined marginally (2.3%), most likely because of short term demand generated by the London Summer Olympics 2012. Thailand, Canada and India managed to increase their supplies by 16%, 11.8% and 5.7% respectively at the expense of lower imports from Denmark, which declined substantially by 17.5%.

The Eurozone's debt crisis is also hurting the bloc's wealthiest economies including Germany. Shrimp imports into this country slipped by 8.5% with shipments from Viet Nam dropping by almost 29% and its position as number one supplier taken over by Thailand. While imports from Thailand were more or less stagnant compared with 2011, shipments from Bangladesh increased significantly by over 32%.

The weakening demand in the EU has also affected shrimp trading in the Netherlands and Belgium. Many European shrimp traders operate from these countries where significant amounts of imported shrimp are re-exported to other EU markets. As a result, up to June 2012, shrimp imports and exports to and from the Netherlands declined by 10.6% and 17.7%; similarly imports/exports of shrimp into and from Belgium declined sharply.

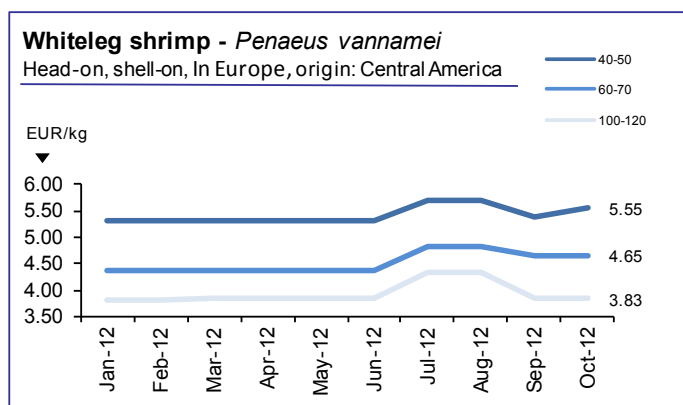

The Danish shrimp industry is also being hit hard by the falling demand in the EU resulting in its exports

dropping by almost 17%. Shipments to major markets posted negative growths, for example to Sweden (-7.4%), UK (-19.2%) and Russia (-19.6%). Shrimp imports into Denmark mainly consist of raw material for re-processing and only declined by 2.1% in 2012.

China

The slowing down of China's economic growth this year, forecast to be around 7.7%, the lowest since 1999, has also slowed shrimp imports. For the period of January-June 2012, frozen shrimp imports into the country were 1.7% lower than the previous year. Canada remained the largest supplier with its exports up by more than 41%, followed by Thailand (+ 44%). Imports from other major suppliers, however, were significantly lower this year, namely from Greenland (-29.2%), Ecuador (-19.0%) and Malaysia (-20%).

China's overall exports of shrimp also declined by 16% during the first half of the year with lower exports to Japan and Spain. However exports to Russia, Malaysia and Hong Kong were higher.

Outlook

The traditional year-end demand is not apparent this year in Western markets. While a recovery in the EU market is most unlikely, importers and wholesalers in the USA are adopting a 'wait and see' policy until after the presidential election on 6 November. The US market also has more than enough inventory to cover the Christmas/ New Year sales even with improved consumer demand.

Shrimp prices in Japan are lower than last year, which could support increased consumption during the coming months. Demand for Southeast Asian vannamei and black tiger shrimp will be good in the Japanese market from now till March/April next year. For year-end sales, the other markets in Asia will also be important for local and regional suppliers.

By November the main farming season in Asia will be over and the next season will commence in April/ May. The Lunar New Year in January/February and the Japanese Spring Festival in April/May fall in this off season period when demand for shrimp is usually high. Therefore market prices will hold and may improve by late December.
