THE MINISTER

**TO
THE EXECUTIVE SECRETARY OF THE INDIAN OCEAN TUNA COMMISSION**

Mister Executive Secretary,

In view of promoting the sustainable exploitation of the tuna and tuna-like species fisheries, and in accordance with the principles and recommendations of FAO, I would be grateful if you could initiate the process to grant my country the status of Cooperating non contracting Party to the Indian Ocean Tuna Commission (IOTC).

Please find hereby attached:

- a declaration of commitment,
- a technical note of information,
- a statistical submission.

Please accept, Mr Executive Secretary, the assurance of my highest consideration.

MOHAMED AHMED AWALEH

N° 202 /MAPE-RH

Djibouti, 28 March 2013

THE MINISTER

DECLARATION OF COMMITMENT

In accordance with the recommendation of FAO for sustainable fisheries, the Minister of Agriculture, Fisheries and Livestock, in charge of Fisheries Resources, reaffirming his view of managing the oceans based on a collective and shared responsibility and based on international agreements and obligations aiming towards the sustainable exploitation of living marine resources, commits to:

- respecting the conservation and management measures adopted by the Indian Ocean Tuna Commission (IOTC);
- strictly enforcing the respect by its vessels of the conservation and management measures adopted by IOTC.

In witness whereof, the present commitment is established for all legal intents and purposes.

MOHAMED AHMED AWALEH

Information note for the application of Djibouti to the status of Cooperating non contracting Party to the Indian Ocean Tuna Commission (IOTC)

Map of Djibouti showing its EEZ (source: Google Earth)

- **Maritime boundaries and continental plateau**

1. The maritime boundaries of the Republic of Djibouti have been established by the Law N°52/AN/78 dated from 9 January 1979 regarding the Territorial Waters, the Adjacent Zone and the Exclusive Economic Zone. The latter extends for approximately 7,000 km² and the total area of waters under the jurisdiction of Djibouti represent 100,000 km² (GTZ, 1996).

The continental plateau (turquoise) of the Djibouti Coast.

- **Fisheries Resources**

2. According to available estimations, the Republic of Djibouti is gifted with significant fisheries resources. The only detailed scientific study on the fisheries resources was completed by the German Cooperation (GTZ) in 1996 and the Maximum Sustainable Yield (MSY) was estimated at 48,000 metric tonnes per year, for all species.
3. According to the statistical data produced by the Directorate for Fisheries, demersal fish species (large demersals) account for 55% of all landings while large pelagic species represent 45%. The most frequently captured species include, by order of importance, seerfish (a tuna-like species highly regarded by local populations), groupers, dolfinfish, trevallies, tuna, barracuda and red snappers.

- **Fishing Fleet**

4. The whole fleet is currently estimated at 300 boats, of which 60% are 7 to 9 meters long boats equipped with 45 HP outboard engines, the rest being 9 to 14 meters long boats equipped with inboard engines.
5. Tuna is fished in Djibouti as a target species, without Djibouti being a member of the IOTC, and annual catches range from 300 to 400 metric tons.
6. Tuna-like species exploited in Djibouti and regarded as being common in the Djibouti waters are: *Scomberomorus commerson* (narrow-barred Spanish mackerel), *Euthynnus affinis* (kawakawa) and *Thunnus tonggol* (longtail tuna).
7. *Scomberomorus commerson*, locally named “Derak” is a migratory species found in the waters of the Tadjourah Gulf, between 30 and 40 meters deep (matching the thermocline) during the fishing season. Young fish are the first to appear at lower depths in December, soon followed by medium-sized fish in

January then by larger fish from May to July.

8. Two other important Scombridae species are exploited in Djibouti during the North-East monsoon season (October through April): these are *Euthynnus affinis*, locally named “Cherva” (kawakawa or “Thonine orientale”) and *Thunnus tonggol* locally named “Zeinube” (longtail tuna or “thon mignon”).
9. It has to be noted that, during short periods, some tuna-like species appear en-masse in the waters of Djibouti, such as yellowfin, bigeye tuna, skipjack, swordfish as well as sailfish which, during the North-East monsoon, is quite abundant in Djibouti waters.

- **Institutional framework**

10. The Fisheries Sector is under the jurisdiction of the Ministry of Agriculture, Fisheries and Livestock, in charge of Fisheries Resources. The field management of the Fisheries Sector is the responsibility of the Directorate for Fisheries which is composed of two divisions: the Division for the Development of the Fisheries Sector and the Division for the Management of Fisheries Resources.
11. The legal framework regulating the Fisheries Sector, named “Code des pêches”, includes notably a Law adopted in 2002 and an Implementing Decree of said Law (2007), as well as a 2007 Order on fishing licences. Currently, a review of the Fisheries Code is being completed with funding by an EU Project.
12. Djibouti does not yet have a research institution dedicated to fisheries, but the Djibouti Centre d’Études de Recherche has plans to create by the end of 2013 a Research Unit that will be dedicated to marine biology.

- **Conservation measures**

13. Overall, the status of the resources seems to be satisfactory. This is mainly due to two basic measures included in the legal framework regulating the Fisheries Sector in Djibouti, namely the prohibition of both industrial fishing and the use of trawls. The management of Fisheries Resources in Djibouti shows that simple management measures can effectively conserve the resources.
14. Faced with grave concerns over illegal fishing in the waters of Djibouti, the Ministry in charge of Fisheries has developed, with help from FAO, a National Plan of Action to Prevent, Deter and Eliminate Illegal, Unreported and Unregulated Fishing (NPAO-IUU) in accordance with the International Plan of Action (IPOA-IUU). This NPAO-IUU, validated at the local level by all Parties concerned by illegal fishing, is a robust tool aimed at strengthening the national surveillance framework currently in place and this plan recommends that the Republic of Djibouti take part in the IOTC process.
15. To ensure the sustainable development and management of the transboundary fisheries resources shared between Djibouti and the adjacent regions, a Draft Agreement for International Cooperation in the Fisheries Sector has been signed in 2012 between Djibouti and the Somaliland Region and between Djibouti and the region of Puntland.
