## Introduction

In apiculture, floral fauna of their surroundings highly related to quality of honey and pollen. Particularly, this factor is critical in stationary beekeeping rather than mobile beekeeping system, which moves according to the blooming season. Therefore, in order to investigate and select an ideal site for stationary beekeeping, it is important to understand the source and composition of floral fauna of certain area. In this study, we selected beekeeping farms in two different regions, and investigated floral source and environmental composition of each location. In addition, to construct more robust faunatic study, we used camera-attached drone to conduct a survey for hard-to-reach areas.

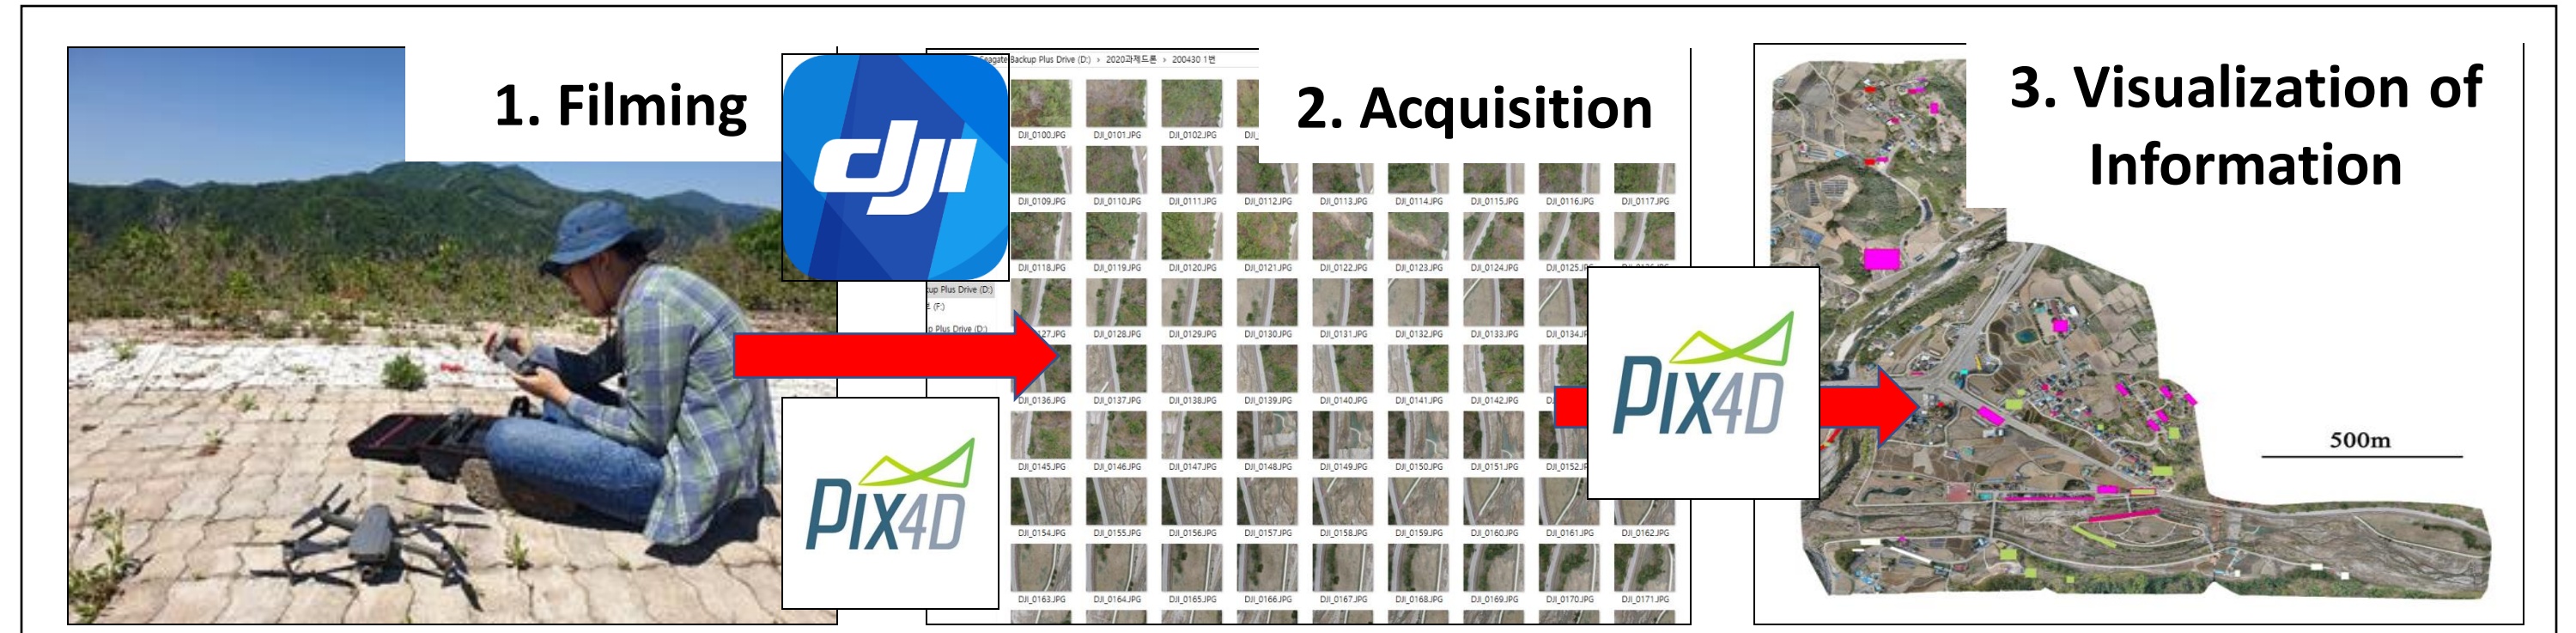

## Material & Method

**Table 1. research period and results of Mokdong-ri, Gapyeong-gun, Gyeonggi-do**

Investigation	Date	Results
1	2020 May 8 <sup>th</sup>	Identifying geographic features, confirming the distribution of honey plants in spring: <i>Prunus jamasakura</i> Siebold, and <i>Rhododendron schlippenbachii</i> Maxim.
2	May 28 <sup>th</sup>	Confirming honey plant distribution: <i>Robinia pseudoacacia</i> L., <i>Castanea crenata</i> Siebold & Zucc., <i>Rosa multiflora</i> Thunb., <i>Actinidia arguta</i> (Siebold & Zucc.) Planch. ex Miq., and <i>Ziziphus jujuba</i> Mill.
3	July 9 <sup>th</sup>	Confirming honey plant distribution: <i>Castanea crenata</i> Siebold and Zucc., <i>Tilia amurensis</i> Rupr.
4	Sep. 15 <sup>th</sup>	Confirming honey plant distribution: <i>Fagopyrum esculentum</i> Moench, <i>Perilla frutescens</i> (L.) Britton, <i>Impatiens textori</i> Miq., <i>Humulus japonicus</i> Siebold & Zucc., <i>Aster scaber</i> Thunb.
5	Oct. 23 <sup>rd</sup>	Confirming honey plant distribution: <i>Dendranthema boreale</i> (Makino) Ling, <i>Aster yomena</i> (Kitam.) Honda, <i>Agastache rugosa</i> (Fisch. & C. A. Mey.) Kuntze

**Table 2. research period and results of Hangye-ri, Inje-gun, Gangwon-do**

Investigation	Date	Results
1	2019 April 15 <sup>th</sup>	Identifying distribution of conifer colony
2	May 3 <sup>rd</sup>	Confirming honey plant distribution: <i>Prunus</i> sp. and <i>Quercus</i> sp.
3	May 10 <sup>th</sup>	Confirming honey plant distribution: <i>Quercus</i> sp. etc.
4	May 28 <sup>th</sup>	Confirming honey plant distribution of <i>Robinia pseudoacacia</i> L.
5	June 24 <sup>th</sup>	Confirming honey plant distribution: <i>Castanea crenata</i> Siebold and Zucc., <i>Tilia amurensis</i> Rupr.
6	2020 April 30 <sup>th</sup>	Confirming honey plant distribution: <i>Prunus jamasakura</i> Siebold, and <i>Pyrus ussuriensis</i> Maxim.
7	May 29 <sup>th</sup>	Confirming honey plant distribution: <i>Robinia pseudoacacia</i> L., and <i>Rosa multiflora</i> Thunb.
8	July 8 <sup>th</sup>	Confirming honey plant distribution: <i>Castanea crenata</i> Siebold and Zucc., <i>Tilia amurensis</i> Rupr.
9	August 20 <sup>th</sup>	Confirming honey plant distribution: <i>Rhus javanica</i> L., <i>Kalopanax septemlobus</i> (Thunb.) Koidz., and <i>Aralia elata</i> (Miq.) Seem.

**Figure 1. Research process for construct vegetation map**

### 1. Study sites

- The study was conducted from 2019 to 2020 in two different beekeeping regions: Mokdong-ri, Gapyeong-gun, Gyeonggi-do, and Hangye-ri, Inje-gun, Gangwon-do. In each region, the drone investigation was performed on a central radius of 2km by region. Detailed information of study period and honey plants are as in Table 1 and 2.

### 2. Field research

- The field research is carried out via drone with DJI GO, and Pix4D programs for close-up filming and forest slope survey.

### 3. Honey plants investigation and digital mapping

- The pictures from drone investigation were merged into ortho imagery using Pix4D, and information input of honey plants into ortho imagery was performed according to the color information of pictures and field investigation.

## Result & Discussion

### 1. Honey plant fauna and environmental features of Mokdong-ri, Buk-myeon, GG.

- Major honey plants such as *Hovenia dulcis* (Oriental resin tree), *Kalopanax septemlobus* (castor aralia), *Castanea crenata* (Chestnut) and *Rhododendron schlippenbachii* (Royal azalea) were planted at near central point.

- Chestnuts, Jujubes, wild roses, gooseberries and Raspberries were widely distributed at survey site.

- Among the plants known as the main honey plants such as False acacia, linden tree and bush clover were comparatively rare.

- Among herbaceous plants, great celandine, Lyre-shape hemistepta, and daisy fleabane were mainly discovered. Also, grasslands and lumbered grounds were widely distributed on the slopes of the mountain.

### 2. Honey plant fauna and environmental features of Hangya-ri, Buk-myeon, GW.

- Major honey plants such as false acacia, linden tree, bush clovers, cherry trees, castor aralia and royal azalea were planted at near central point.

- Sand pear, false acacia, cherry trees, royal azalea were widely distributed at survey site.

- Among the plants known as the main honey plants, Chestnut trees were comparatively rare.

- On the mountain slope, widely covered with Coniferus plants including pine trees, and oak trees which can work as good pollen provider. Total extent of grasslands and lumbered grounds were comparatively small.

### 3. Discussion

- In our investigation, there was a difference in major honey plant composition. In addition, auxiliary honey plants also showing significant difference. This result implies different beekeeping environments could be developed in similar climates and conditions.

- In both target site, artificial planting of diverse honey plants was observed. This creation of a honey plant environment could help improve and diversify the quality of honeybee products.

- If this honey plant investigation and visualization method can be applied to other beekeeping area, it is thought that the evaluation of beekeeping suitability for specific area can be facilitated.

- In addition, it is expected to be helpful in establishing local products development, in the point of characterization of honeybee products with reflection of regional features.

- Goldenrain (*Koeleruteria paniculata*)
- Chestnut (*Castanea crenata*)
- Gooseberry (*Actinidia* spp.)
- Cherry (*Prunus* spp.)
- Guelder rose (*Viburnum sargentii*)
- Bush clover (*Lespedza* spp.)
- Royal azalea (*Rhododendron schlippenbachii*)
- False acacia (*Robinia pseudoacacia*)
- Castor aralia (*Kalopanax* spp.)
- Sharon (*Hibiscus syriacus*)
- Jujube (*Ziziphus jujuba*)
- Korean box tree (*Buxus microphylla*)
- Wildflowers (Great celandine, Lyre-shape hemistepta, etc...)
- Linden (*Tilia* spp.)
- Raspberry (*Rubus crataegifolius*)
- Other broadleaves (Oak tree, Maple... etc)
- Wild rosebush (*Rosa multiflora*)
- Dogwood (*Cornus controversa*)
- Grasslands (Trifolium, arrowroot... etc)
- Conifer trees (Pinaceae)
- Honey crops (Sesame, Buckwheat... etc)

- Forsythia (*Forsythia koreana*)
- Chestnut (*Castanea crenata*)
- Sumac (*Rhus javanica*)
- Cherry (*Prunus* spp.)
- Laceshrub (*Stephanandra incisa*)
- Bush clover (*Lespedza* spp.)
- Royal azalea (*Rhododendron schlippenbachii*)
- False acacia (*Robinia pseudoacacia*)
- Castor aralia (*Kalopanax* spp.)
- Moss Phlox (*Phlox subulata*)
- Sand Pear (*Pyrus ussuriensis*)
- Conifer trees (Pinaceae)
- Bridal wreath (*Spiraea prunifolia*)
- Linden (*Tilia* spp.)
- Honey crops (Sesame, Potato, Corn...etc)
- Other broadleaves (Oak tree, dogwood... etc)
- Wild rosebush (*Rosa multiflora*)
