A photograph of a market stall. Three women are present. One woman in the foreground is wearing a red and white striped shirt and a red headwrap, leaning over a table covered with various pieces of wild meat. Another woman in the middle ground is wearing a colorful patterned dress and a multi-colored headwrap, looking down at the meat. A third woman in the background is wearing a blue t-shirt and a headwrap, looking towards the camera. The stall is made of wooden poles and has a table with a green cloth. A black handbag with white patterns is hanging from a pole. A small informational card is visible on the table. A green circular graphic with a yellow bottom arc is overlaid on the image, containing text.

An estimated 285  
mammal species  
are threatened with  
extinction due to hunting  
for wild meat

A woman with dark skin and hair pulled back is looking out from a rustic structure. The structure is made of wooden planks and a large orange tarp that has a jagged hole in the center. The background is a dark, textured wall. The overall scene suggests a rural or indigenous setting.

# the challenge

Millions of people depend on wild meat for food and income. Wild meat is an important source of protein, fat and micronutrients, particularly for Indigenous Peoples and rural communities in Latin America, Africa and Asia.

The demand for wild meat is growing, especially in urban areas. If hunting for wild meat is not managed at sustainable levels, then wildlife populations will decline and rural communities will suffer increased food insecurity. Recent studies have shown that overhunting for food is now threatening hundreds of wildlife species with extinction.

# our response

The Sustainable Wildlife Management (SWM) Programme will improve the conservation and sustainable use of wildlife in forest, savannah and wetland environments. Field projects are being implemented in 15 African, Caribbean and Pacific countries. The aim is to achieve the following seven results:

## Result 1

Improve institutional and legal frameworks

## Result 2

Improve the management of fish and terrestrial wildlife

## Result 3

Improve the supply of alternative protein

## Result 4

Ensure that consumption of wild meat becomes sustainable

## Result 5

Undertake monitoring, evaluation and learning

## Result 6

Generate new knowledge to support conservation and food security

## Result 7

Reduce the spillover risks of zoonotic pathogens

*“The SWM Programme’s lessons learned and recommendations should enable the wider OACPS to adapt and replicate some of the viable solutions.”*

**Cristelle Pratt,**  
Assistant Secretary-General,  
Organisation of African, Caribbean and Pacific States (OACPS)

# improving management

The SWM Programme supports robust community-based sustainable wildlife management. To achieve this, six key components are needed.

## **1** Understanding the environment and its use

Communities need to know the abundance of wildlife, including fish, in their environment, if these animal populations are stable or declining, and how they are currently used by the community.

## **2** Devolution of exclusionary rights

Stewardship is predicated on the recognition and respect of communities' rights to their resources.

## **3** Local-level management by a competent authority

Empowered communities are the most appropriate level of organization for managing wildlife.

# 4

## **Social cohesion to manage as a community**

Working together is critical.

# 5

## **Effective governance systems**

Communities need recognized governance groups.

# 6

## **Sustainable solutions for growth and increasing aspirations**

Producing alternative sources of food and income.

# where we work

**SWM**  
PROGRAMME

## Guyana - Rupununi savannahs

Sustainable wildlife and fisheries management in savannah forest landscapes

## Gabon - Mulundu Department

Sustainable management of village hunting in the wildlife trade catchment of a small provincial town, in a context of low human density

## Congo - Ouessou basin

Sustainable community hunting and fishing management in logging concessions

## Botswana and Namibia - Community conservancy project

Community conservancies to improve sustainable wildlife management in the Kavango-Zambezi (KaZa)

## Zambia and Zimbabwe - KaZa

Community conservancy as a basis for a nested wild and domestic protein supply model

*“The overarching aim of the European Union’s Biodiversity Strategy is to protect nature and reverse the degradation of ecosystems while enabling sustainable green development that brings multiple benefits to local communities and partner countries. The SWM Programme contributes to this goal in various ways.”*

Chantal Marijnissen,  
Head of Unit,  
Directorate General for International  
Partnerships (DG-INTPA)  
European Commission

• **Sahelian Wetlands Site - RESSOURCE Project**

Sustainable management of migratory waterbirds within wetlands for the benefit of local communities

Senegal Mali Chad Sudan Egypt

• **Papua New Guinea - Bismarck Forest Corridor**

Sustainable consumption of meat and cultural materials obtained from wildlife

• **Madagascar - Makira landscape**

Transition from subsistence consumption of endemic species that are particularly vulnerable to that of resilient exotic and domestic species

• **Democratic Republic of the Congo - Ituri landscape**

Sustainable community management of hunting and forest resource use within and outside protected areas

# working with communities

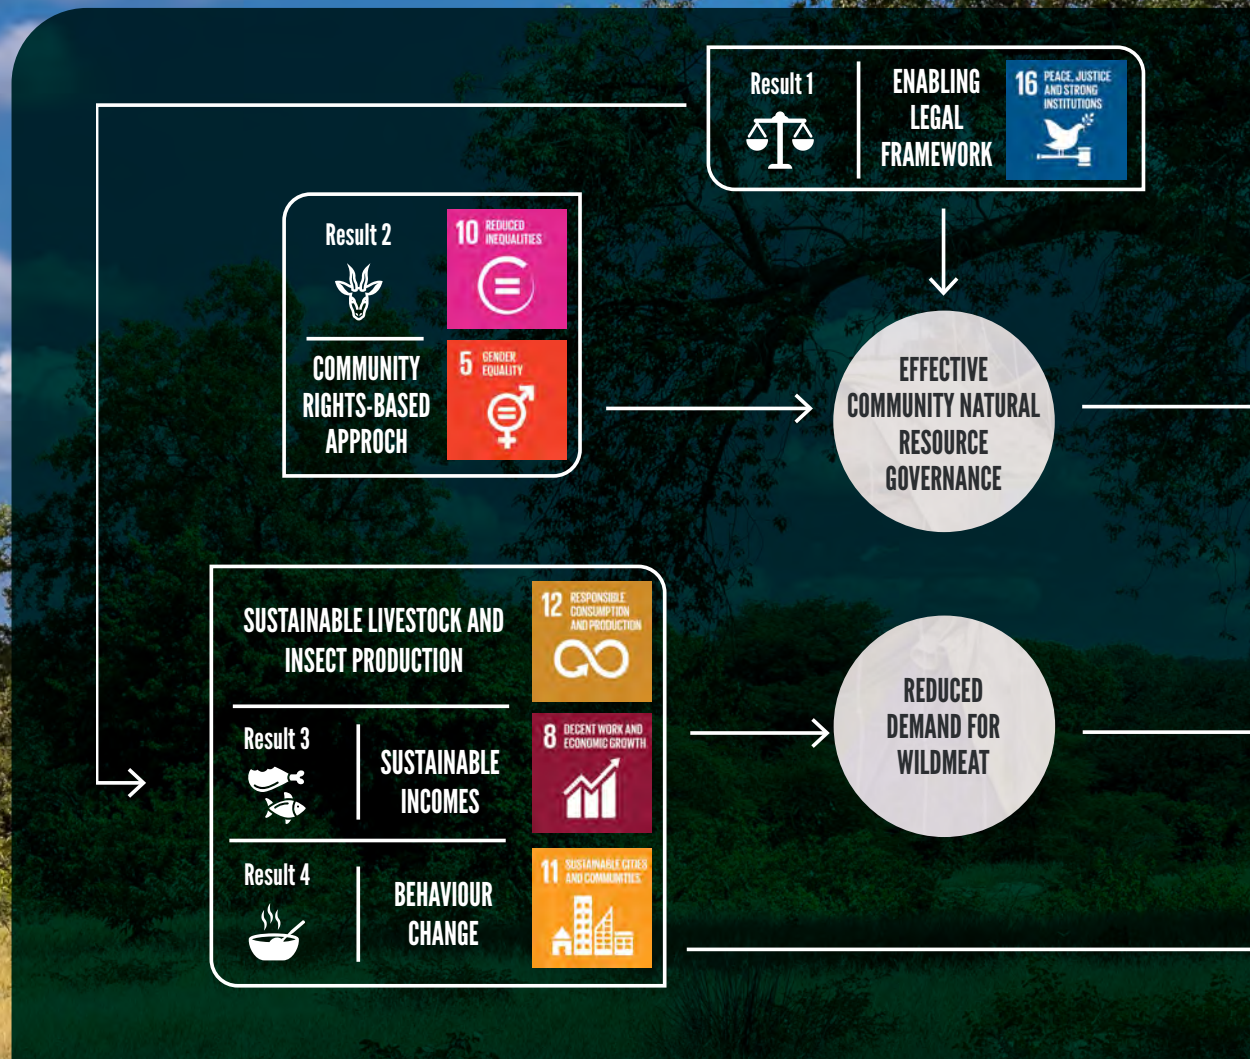

Respectful engagement with Indigenous Peoples and local communities is a core feature of the SWM Programme. This is reflected in our community rights-based approach (CRBA). Putting people's rights at the centre of wildlife management will help ensure that a suitable balance can be found between conservation and the use of wildlife resources for food security and nutrition. For example, before we begin any project, or major new activity in the project lifecycle, we first seek the free, prior and informed consent (FPIC) from the communities with whom we work.

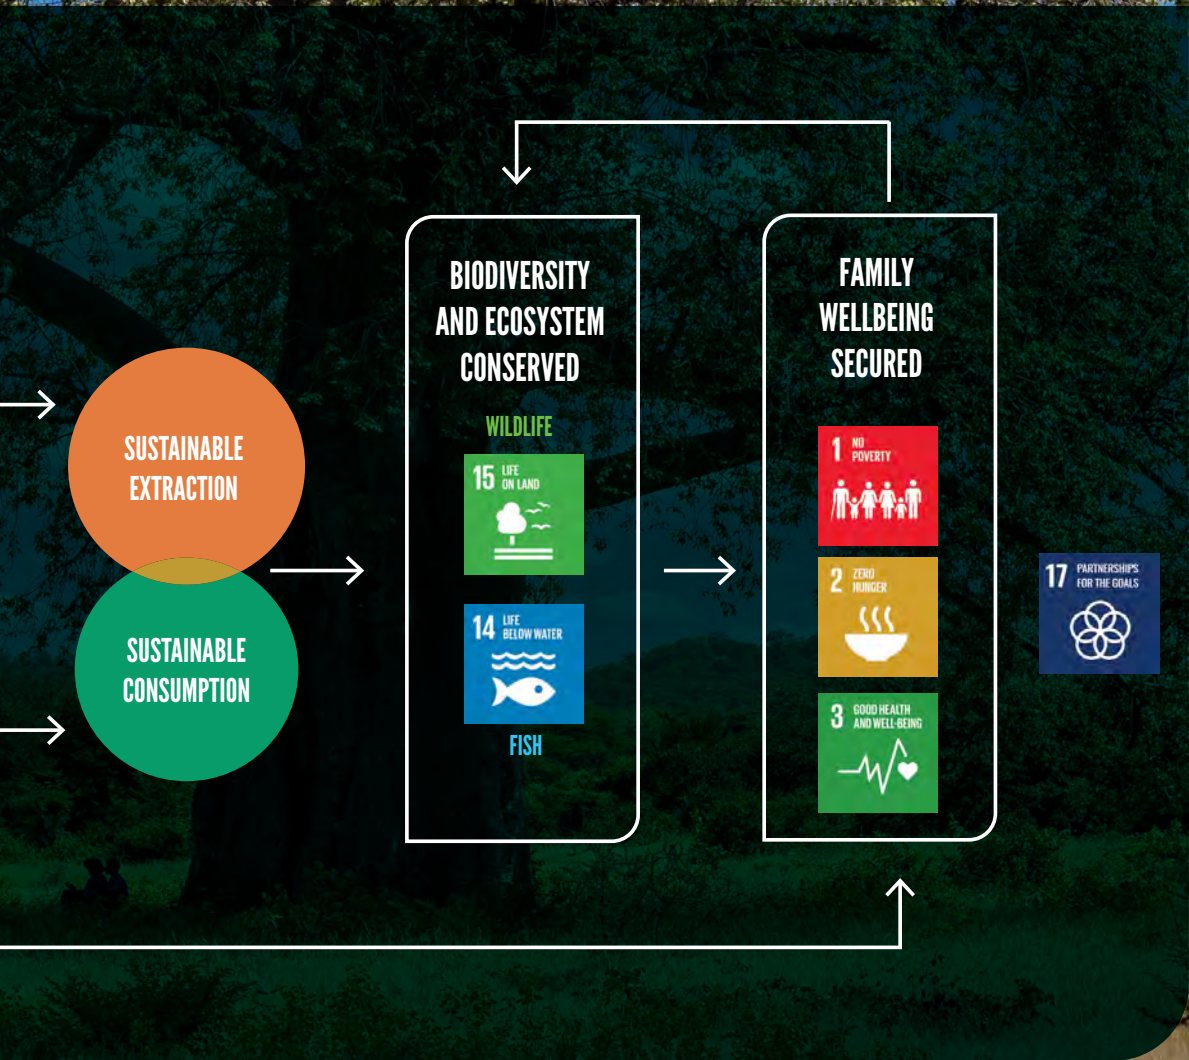

**The needs, rights and interests of Indigenous Peoples and local communities are at the centre of all SWM Programme activities**

# Sustainable Development Goals

The SWM Programme is contributing to multiple Sustainable Development Goals (SDGs) in an inter-connected way.

Four donors, four  
implementing partners,  
fifteen governments  
and over a hundred  
rural communities

# partnership approach

The SWM Programme is being implemented by a dynamic consortium of partners who are working together with governments and local communities to conserve wildlife and develop a sustainable future. The consortium includes the:

- Food and Agriculture Organization of the United Nations (FAO)
- French Agricultural Research Centre for International Development (CIRAD)
- Center for International Forestry Research (CIFOR)
- Wildlife Conservation Society (WCS)

The SWM Programme is an Organisation of African, Caribbean and Pacific States (OACPS) initiative, which is being funded by the European Union with co-funding from the French Facility for Global Environment and the French Development Agency.
