

EUROPEAN PRICE REPORT

Issue 3/2017 March 2017

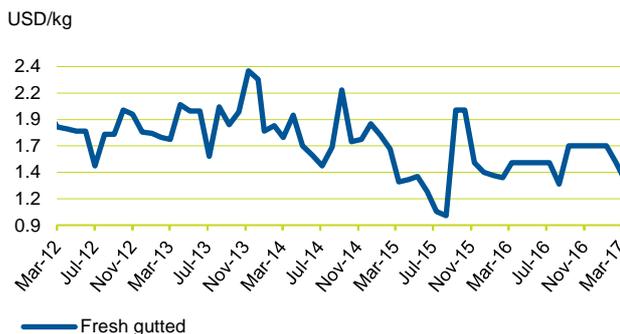

LATEST TRENDS

Seafood sales are generally low during this period of the year, but there has been a return of some buying interest in preparation for the week before Easter, “Holy Week”, when seafood consumption increases sharply in Catholic areas of the continent. Prices overall are stable, with the exception of some upward movement in prices for cod products, which have been impacted by a several month long strike in Iceland that continued up until the end of February.

GROUND FISH

After nine weeks of dispute, the longest fishermen’s strike in modern Iceland’s history came to an end at the end of February. Although only 52.4% voted by ballot to accept the new terms, the fleet is already putting to sea. While some concessions have been made, it remains unclear whether the crews have won full tax-free status for food and other at-sea payments. The effects of the lengthy strike were felt across Europe and brought warnings from UK retailers who voiced fears that some fish products could temporarily disappear from supermarket shelves.

COD - in Poland (FOB, origin: Baltic Sea)

The **European Fish Price Report**, based on information supplied by industry correspondents, aims to provide guidance on broad price trends. Price information is indicative and should be used only for forecasting medium- and long-term trends. FAO is not responsible for any errors or omissions.

It will take some time before the groundfish situation returns to normal, and cod prices, in particular, are reported to be sky high. The same price effects were also felt for cured products such as wet-salted cod fillets (*Gadus morhua*) from fresh raw material of Faroese and Icelandic origin, for which there is very little raw material currently available due to the strike. The same situation is true for wet-salted cod fillets from frozen raw material (*Gadus macrocephalus*) and prices are expected to remain at the high level reached over the past month.

Lower prices are being reported for Alaska pollock on the Moscow market due to good supply, although landings of Alaska pollock have declined in recent days following stormy weather. Demand is currently strongest for larger Alaska pollock (30+ and 35+). In Poland, meanwhile, cod prices are declining.

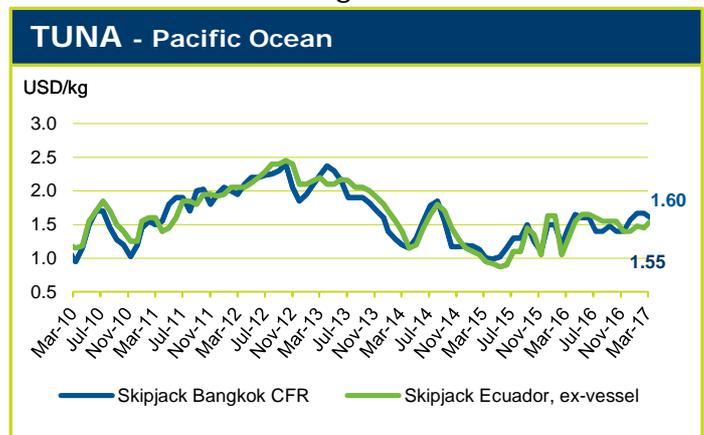

In the surimi market, the appreciation of the euro versus the US dollar over recent days has pushed prices down somewhat, a consequence of the fact that most of the raw material for surimi production in Europe comes from Alaskan fisheries.

TUNA - BILLFISHES

Tuna prices have increased despite good catches in the Eastern Pacific. The only exception is the Bangkok market, where skipjack prices have fallen. As Bangkok is the trend setter worldwide, it is likely that skipjack prices will soon follow in other markets.

Fishing in the Eastern Pacific has been good, boosted by plentiful rain, and local canneries continue to report healthy raw material inventories. Tuna prices have risen in Ecuador, narrowing the price differential with the Bangkok market. Spanish canneries are buying pre-cooked loins in Ecuador, taking advantage of the lower price there compared with Thailand as well as the zero-duty regime favouring the Ecuadorian product.

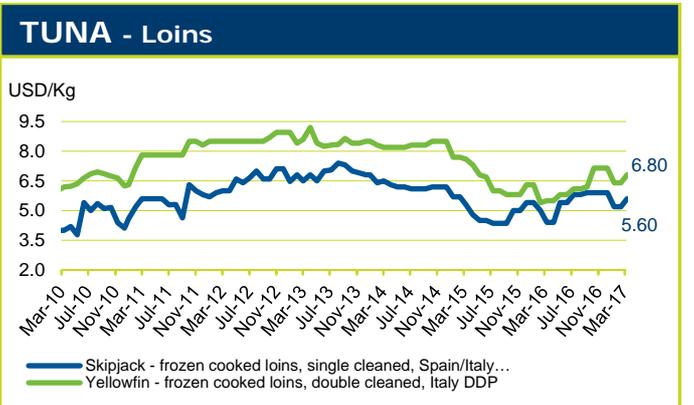

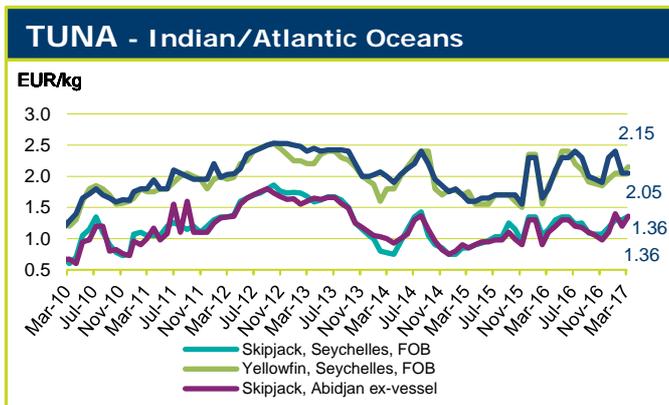

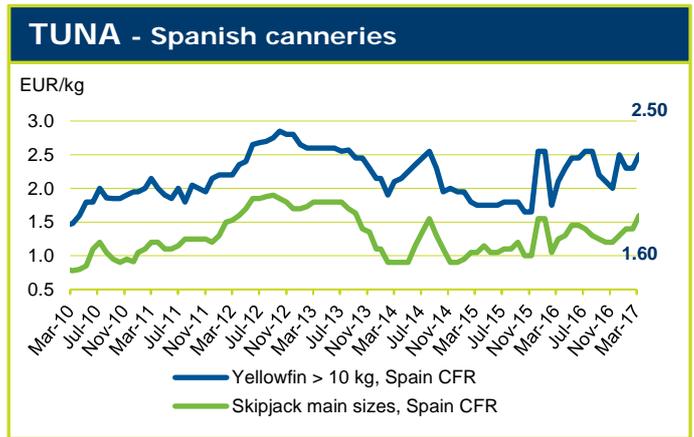

Tuna fishing in the Western and Central Pacific remains slow. However, raw material inventories at Thai canneries remain at healthy levels and some canneries are complaining of slow finished goods sales. As a result, skipjack prices have dropped.

Fishing in the Indian Ocean is ongoing at a moderate rate and raw material inventories at local canneries are reported to be healthy. Skipjack and yellowfin prices are on the rise.

The FAD closure in the Atlantic Ocean ended on 28 February but fishing continues to be poor. Some local canneries are reported to be low on raw material and may have to cease operations until fishing improves.

As a result of the poor fishing, skipjack prices have increased while the market price for cooked, double cleaned yellowfin loins has also risen as the zero-duty quota for Thailand, Indonesia and the Philippines has been used up.

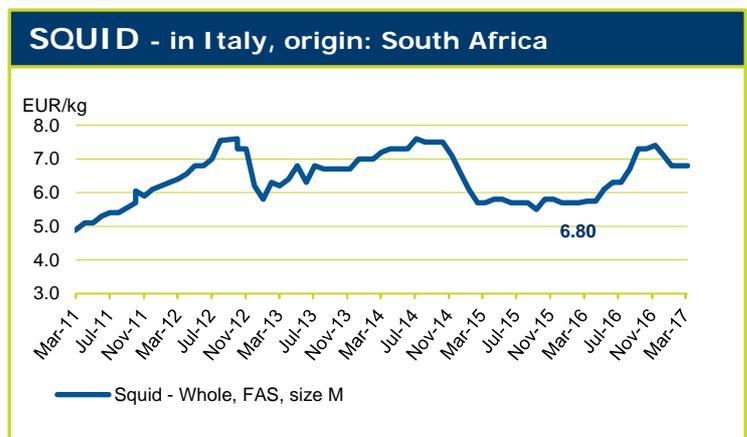

SMALL PELAGICS

Pacific herring is widely available on the Far East and Moscow market, and prices are falling. Baltic herring prices are decreasing in Poland also as demand is still weak, but they are expected to pick up as Easter approaches. Sprat prices in Poland are already moving up on the back of good demand.

CEPHALOPODS

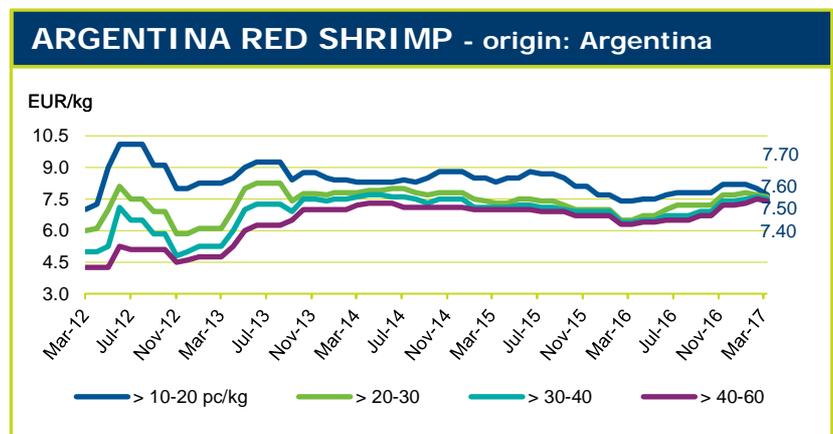

Illex catches in the Southwestern Atlantic, the main product on the European market, are reportedly good this year after a very disappointing season last year. With the expectation of more squid on the market, prices are expected to fall soon.

Catches in the South African squid fishery have dropped sharply, and with the 3-month closed season starting at the end of March, prices have firmed. The size mix has returned to a more normal pattern, with a lower proportion of small squid in the landings. The local Rand currency has appreciated substantially over the last year or so, but is now showing some weakness. Current stocks have been largely committed and there is no stock overhang to encourage price cuts.

CRUSTACEANS

The market for Argentine **shrimp** is unbalanced at present as lower catches in Argentina are leading to price hikes, even though prices have been declining in Spain since the New Year due to continuing oversupply, particularly for the larger 10-20 size. However, the return of buying interest in anticipation of Holy Week sales, combined with lower stocks at origin, should soon create the market conditions necessary for substantial price increases.

The Shrimp Club of Indonesia has reported 2016 shrimp production of some 265 000 tonnes, a decrease compared with 2015. In the opening months of 2017, raw material supply from Indonesia continues to drop due to various diseases (primarily white feces syndrome, white spot syndrome and infectious mionecrosis) and bad weather. As a result, price are increasing day by day.

The European **lobster** season is now over, as is the Canadian season. The first volumes of the new production will reach the market in May. The **crab** season has also come to an end.

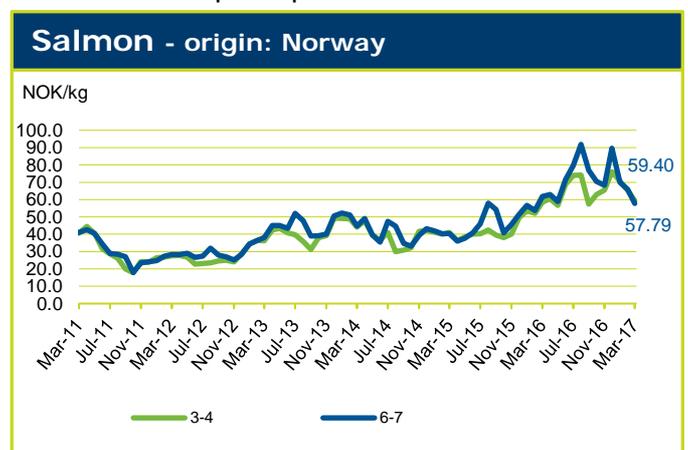

BIVALVES

The bouchot mussel season has now come to an end, and as usual Irish, Spanish and Dutch mussels have taken over the French market. The Wadden Sea of the Netherlands has had a good production season this year, to the benefit of Dutch packers.

The oyster market has been boosted by the French Salon d'Agriculture which took place in late February and early March. A product testing competition, "Concours Général Agricole", awards gold, silver and bronze winners which helps raise the public profile of the prize-winning oysters.

SALMON

After a year of record prices, record export revenues and bumper earnings for aquaculture companies, 2017 has started with a steady decline in export prices for farmed Atlantic salmon. The underlying cause of the drop is a combination of greater availability of fish, particularly larger sizes, and the seasonal reduction in demand that is typically seen at this time of year. Increasing biomasses at farms and a high average weight of fish forced harvesting earlier in 2017, but the continuing absence of the major early year importer, Russia, means there has been insufficient buyer interest to support prices at the levels attained during the year-end rush.

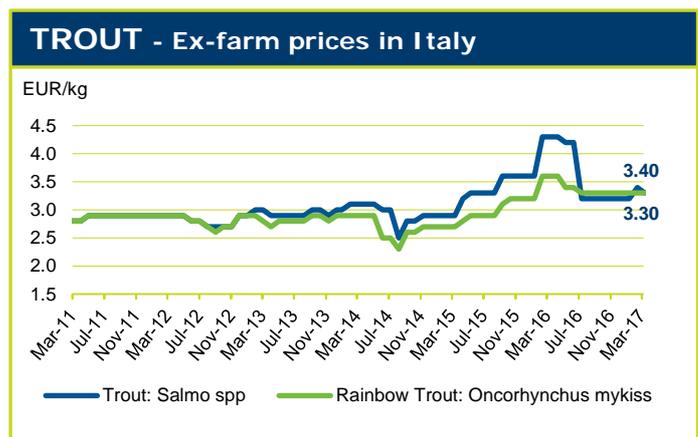

The NASDAQ salmon index in week 9 of 2017 was at NOK 58.44/kg, a 12 week decline of 16% and just below the same week in 2016. The average export price for February as a whole was still higher this year, however, and recent figures from the Norwegian Seafood Council (NSC) put the total value of Norwegian salmon exports in February at NOK 5 billion, 16% more than last year, with flat volumes. UK export prices have also fallen significantly in recent weeks, having resisted the downward pressure for a little longer than their Norwegian counterparts.

Industry analysts expect Norwegian production volumes to return to slow growth in 2017, with Nordea markets predicting total harvest volumes of 1.17 million tonnes (whole fish equivalent) for the year. Together with the expected increase in supply from other sources, this represents one of a number of potential sources of downward pressure on Norwegian prices. Others include a strengthening Norwegian krone and a delayed consumer reaction to more expensive product as processors pass on raw material costs previously shielded by contracts. The forward price markets at FishPool are reflecting these possibilities and have softened their expectations of 2017 prices somewhat, particularly towards the end of the year, although there are still no sustained dips expected below the NOK 60 level.

TROUT

The Norwegian trout farming sector has successfully developed a diverse range of markets in Europe, Asia and North America in response to the Russian trade embargo and has consequently seen demand grow rapidly to the point where biomasses at farms have now been significantly depleted. As a result, export volumes in the first two months of 2017 have fallen substantially below last year, and prices are sky high, reaching almost NOK 75/kg average unit value in February for all products, 63% higher than 2016. Belarus, Japan, Poland, USA, Thailand and Ukraine are now all buying large and increasing volumes of Norwegian trout and the outlook for the sector is dependent only on the availability of fish to supply the booming demand.

FRESHWATER FISH

Carp is in sufficient supply on the Hungarian market, but demand remains weak. In an attempt to move the carp supply, supermarkets have launched new sales campaigns.

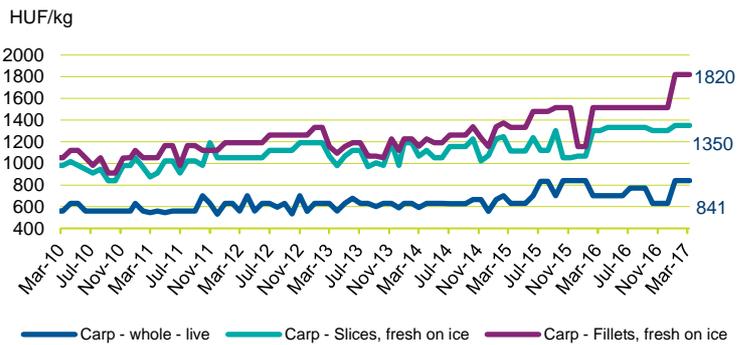

The supply of tilapia from China to the world market depends on the country's winter climate. Last year, the cold winter led to heavy mortalities in the tilapia ponds, but this year the weather has been milder and there is now a good stock of product and stable market prices.

The negative media coverage of pangasius in Spain led Carrefour Spain to decide to stop stocking pangasius in late January and to discontinue sales of this particular species in both its fresh seafood (fish counter and self-service) and frozen foods sections. This decision affects both its own-brand products and those of national brands. The same measure was adopted in France, Belgium and Italy. Obviously, demand in Europe

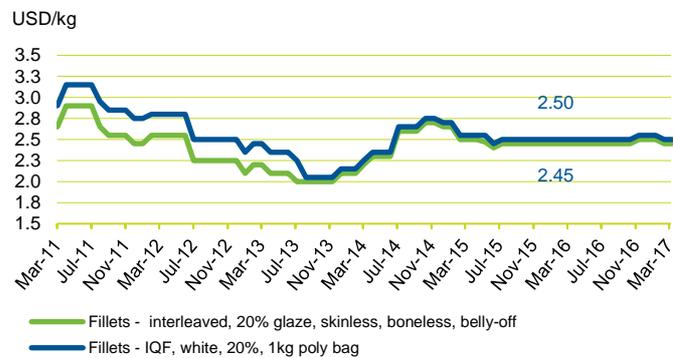

for this species is now very weak. Viet Nam is also increasing its sales prices, which is likely to lead to a further shrinking of its market share in Europe.

Market conditions for Nile perch in the European market have remained the same for the past year: very good demand, limited catches and very high prices. Sales of fresh product have by now almost completely replaced those of frozen.

CARP - in Europe, origin: Hungary

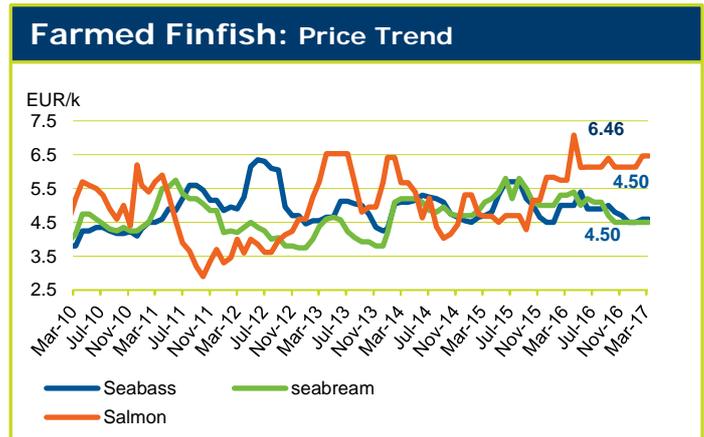

Pangasius - in Spain, origin: Viet Nam

SEABASS - SEABREAM - MEAGRE

This time of year is a low period for the European bass and bream market as both species are traditionally summer food items. For Greek fish sold on the Italian market, the only change this month is a minor increase in the price of bass while bream prices have remained stable. Full year trade statistics are now available for both the major producing countries, Greece and Turkey, and the published figures confirm the trends reported by market participants

during 2016. Specifically, while bass supply saw only moderate increases, bream supply was boosted by a 44% year-on-year increase in export volumes out of Turkey, which saw prices drop across all European markets. This increase was largely unexpected by the sector, as the levels of juvenile stocking in Turkey were not widely known, and there is now widespread concern that the much-needed boost in bream prices over the last two years may have been only temporary. Bass prices have not been affected to the same extent so far, but the forecasted production growth in Greece, Spain and Turkey is likely to have an impact over the next couple of years. To prevent a return to the unsustainably low prices that previously crippled the Greek industry, the farmed bass and bream sector as a whole will need to focus on achieving efficiency gains at farm level, expanding the value-added product range and developing new markets to supplement core European demand.
