FOREWORD

Compiled by the Forestry and Forest Industries Division of FAO in collaboration with the Economic Commission for Europe, this, the twenty-second, Yearbook includes statistics from 180 countries.

The progress that has been achieved in the collection of international statistics of forestry and forest products is the result of the special efforts that have been made in each member country by the forestry and statistical authorities. The FAO is proud to have participated in these efforts through its technical assistance programme and the regional meeting of the Forestry Commissions and Statistics Working Parties.

AVANT - PROPOS

Le présent volume de l'Annuaire - vingt deuxième dans la série de cette publication - préparé par la Division des forêts et des industries forestières de la FAO en collaboration avec la Commission économique pour l'Europe, contient des statistiques de 180 pays.

Le progrès accompli dans le rassemblement de statistiques internationales des forêts et des produits forestiers résulte des efforts particuliers des autorités forestières et statisticiennes dans chacun des pays membres. La FAO est fière d'avoir contribué à ces efforts par son programme d'assistance technique et par les réunions régionales des Commissions forestières et des Groupes de travail statistiques.

PRÓLOGO

Vigésima segunda de la serie, la presente edición del Anuario, que la Dirección de Montes y Industrias Forestales de la FAO prepara en colaboración con la Comisión Económica para Europa, contiene estadísticas de 180 países.

Los adelantos conseguidos en el acopio de estadísticas internacionales sobre montes y productos forestales son fruto de los especiales esfuerzos desplegados en cada uno de los Estados Miembros por las autoridades competentes en silvicultura y estadística. La FAO se enorgullece de haber participado en tales actividades a través de su Programa de Asistencia Técnica y de las reuniones regionales de las Comisiones Forestales y de los Grupos de Trabajo en materia de estadística.

HIGHLIGHTS OF WORLD PRODUCTION AND TRADE OF FOREST PRODUCTS IN 1967

PRODUCTION

The value of world production of forest products in 1967 reached US \$43,100 million (based on constant 1960 prices), 2% above the 1966 figure. Table I shows the changing pattern of the development of the different product groups since 1950, and their relative importance. Though in many regions, especially in the less industrialized countries, statistical coverage may be inadequate, this Table still shows the overall trends of the fast development of forest production.

Table I - Value of world production ^a
(1,000 million \$ U.S.)

| | 1950 | 1960 | 1965 | 1967 ^b |
|-----------------------------|-------------|-------------|-------------|-------------------|
| Processed wood ^c | 10.3 | 13.5 | 15.1 | 15.0 |
| Panel products ^d | 1.0 | 2.7 | 4.4 | 4.9 |
| Pulp products ^e | 8.7 | 12.2 | 16.2 | 17.8 |
| All other wood products | 3.9 | 5.5 | 5.3 | 5.4 |
| Total | 23.9 | 33.9 | 41.0 | 43.1 |

a At constant 1960 prices.

b Provisional.

c Sawnwood, sleepers, boxboards.

d Veneers, plywood, particle board, fibreboard.

e Paper and paperboard.

In 1967 sawn softwood production slightly decreased, compared with 1966, mainly due to a strong decrease in North America and a slight one in Europe and Pacific area, while in Latin America and Asia increases in production of both coniferous and broadleaved sawnwood occurred. Broadleaved sawnwood production declined considerably in North America and slightly in Africa and Pacific area, but increased significantly in all the other regions. Again these figures are still provisional and do not take account of a considerable quantity of unreported output.

Output of panel products increased in almost all regions, except for a decrease of fibreboard production in North America. This regular continuous expansion of the production of wood-based panels has brought plywood output over the last decade from 13 to 25.7 million m³, fibreboard from 3.7 to 6.2 million m. t. and particle board from 1 to 6.8 million m. t. Though the production of these three products is naturally much higher in the industrialized regions, it is most encouraging to notice that their production is growing fast if not relatively faster in the developing regions, not only contributing to a better standard of living but also improving the balance of payment situation.

The expansion of the pulp and paper industries continued in 1967 and reached a total production of US \$17,800 million, slightly above the 1966 figure. This increase was reached however despite a considerable slowdown in North America. The expansion occurred in all the categories of paper and paperboard; but the world production of newsprint increased only marginally. Output of printing and writing paper in 1967 reached a top level of 20.4 million m. t. but the largest increase was found in the category of non-cultural paper and paperboard. With this regularly expanding production the pulp and paper sector accounted in 1967 for 41% of the total value of world output of forest products as compared with 36% in 1950 and 1960.

TRADE

World trade in forest products in 1967 again expanded considerably for most products and especially so for roundwood and wood-based panel products.

Exports of sawlogs and veneer logs reached a record total of 42 million m³, an 11% increase over the 1966 figure and more than a tenfold increase in ten years. The constant broadleaved log trade in South East Asia (accounting now for 68% of the world total) and the fast expanding coniferous log exports in most regions of the northern hemisphere are the outstanding factors in this expansion. Coniferous log exports in North America continued to grow very fast, increasing 48% over the 1966 figure and accounting for 53% of the world total. As to broadleaved logs, exports in Africa picked up again for the first time since 1964. The trade of pulpwood (round or split) increased again in 1967 to reach 14.7 million m³, a 3% increase over 1966, with a spectacular 16% increase in exports in Europe and a mild expansion in Africa. The exports in North America, however, dipped considerably, with 0.45 million m³ less than in 1966 as pulpwood trade occurs increasingly as wood chips.

World exports of sawn softwood started to grow again for the first time since 1964. The decrease in exports occurring in Europe since 1964 seems to be levelling off, while imports have started to rise. On the other hand, in North America a strong expansion took place with exports reaching a record level of 17.7 million m³. Imports in the main importing countries, USA and the UK, rose considerably in 1967 but decreased significantly in the Federal Republic of Germany for the second year in a row.

World trade in broadleaved sawnwood remained at practically the same level in 1967 compared with 1966. No major changes occurred in the regional trade pattern except for North America where exports decreased by 0.1 million m³, and in Africa where a slight decrease was noticed.

World trade broke new records in 1967 for all panel products, reaching a total export value of US \$775 million. Only the increase in veneer sheets was slight, reaching 0.77 million m³, but plywood exports topped the 3 million m³ mark, an almost three-fold increase since 1957. Both these products continue their important role as foreign currency earners for South East Asia, bringing in almost 190 million \$US in 1967. The strongest expansion of plywood exports was noticed, however, in North America, with a 25% increase compared with 1966. Plywood imports grew very strongly in Europe with a 20% increase over 1966, mainly because of a more than 30% growth in UK imports which accounted in 1967 for 2/3 of Europe's imports. World fibreboard exports increased by 10% mainly due to a strong rise in exports in Europe, reaching 0.91 million m. t. or 80% of the total world figure. The UK, with imports of 290,000 m. t. in 1967, remained by far the world's largest importer.

World trade in particle board again made a major step forward and topped the 3/4 million m. t. mark. More than 90% of this trade comes from European countries,

Exports of woodpulp reached a new record level in 1967 with 13.6 million m. t., a slight increase over the 1966 level. This was mainly due to strong North American exports which increased 5% compared with 1966 and offset the slight decrease in European exports. Imports in 1967 rose in most parts of the world except in North America which thus further increased its favourable trade balance of this product.

The export value of paper products passed the US\$ 3,000 million level for the first time with newsprint accounting for US\$ 1,200 million, and non-cultural paper and paperboard accounting for US\$ 1,350 million.

The expansion in world trade of pulp products was strongest in the category of printing and writing paper exports, which rose by about 5% in 1967 compared with 1966. Newsprint exports, on the other hand, decreased by about 0.3 million m. t. mainly due to a decrease in the North American trade, while trade in the other regions remained practically at the 1966 level. Imports of printing and writing paper rose considerably in Europe and slowed down slightly in most other regions except in Asia where a strong increase of more than 25% over the 1966 figure is noticed. Exports of non-cultural paper and paperboard rose strongly in North America, but remained practically stable in other regions. Imports increased considerably in Europe, Asia and Africa.

ASPECTS SAILLANTS DE LA PRODUCTION ET DU COMMERCE MONDIAUX DES PRODUITS FORESTIERS EN 1967

PRODUCTION

La valeur de la production mondiale des produits forestiers en 1967 s'est élevée à 43.100 millions de \$ E.U. (prix constants de 1960) soit 2% de plus qu'en 1966. Le tableau I permet de suivre l'évolution des divers groupes de produits et de leur importance relative depuis 1950. Malgré les lacunes des statistiques, surtout pour les régions peu industrialisées, il indique bien les tendances générales du développement rapide de la production forestière.

Tableau I - Valeur de la production mondiale
(1.000 millions\$ E.U.)

| | 1950 | 1960 | 1965 | 1967 b |
|---------------------------------|-------------|-------------|-------------|-------------|
| Bois travaillés c | 10,3 | 13,5 | 15,1 | 15,0 |
| Panneaux d | 1,0 | 2,7 | 4,4 | 4,9 |
| Produits de pâte e | 8,7 | 12,2 | 16,2 | 17,8 |
| Tous autres produits du bois | 3,9 | 5,5 | 5,3 | 5,4 |
| Total | 23,9 | 33,9 | 41,0 | 43,1 |

a Prix constants (base 1960)

b Provisoire.

c Sciages, traverses, planches de caisserie.

d Placages, contreplaqués, panneaux de particules
panneaux de fibre.

e Papiers et cartons.

Le léger fléchissement de la production de sciages de résineux en 1967 est attribuable surtout à une réduction importante en Amérique du Nord, moins marquée en Europe et dans la région du Pacifique, tandis qu'en Amérique latine et en Asie la production de sciages tant de résineux que de feuillus, a augmenté. La production de sciages de feuillus a beaucoup diminué en Amérique du Nord et a aussi légèrement baissé en Afrique et dans la région du Pacifique, mais elle s'est accrue considérablement dans toutes les autres régions. On notera que les chiffres sont provisoires et ne tiennent pas compte des quantités assez importantes qui ne sont pas enregistrées.

La production de panneaux dérivés du bois a augmenté dans presque toutes les régions; on note toutefois un fléchissement de la production de panneaux de fibre en Amérique du Nord. La production de panneaux s'accroît régulièrement: pour le contreplaqué elle est passée, depuis dix ans de 13 à 25,7 millions de m³, pour les panneaux de fibre de 3,7 à 6,2 millions de t.m. et pour les panneaux de particules de 1 à 6,8 millions de t.m. Certes, les régions industrialisées en produisent de loin la majeure partie, mais il est encourageant de noter que la production s'accroît tout aussi vite, si ce n'est à un taux encore plus rapide, dans les régions en voie de développement, c'est là un facteur non seulement d'amélioration du niveau de vie mais aussi de redressement de la balance des paiements.

L'expansion des industries de la pâte et du papier s'est poursuivie en 1967, et la production a atteint une valeur totale de 17.800 millions de \$ E.U., soit légèrement plus qu'en 1966. Cette expansion, qui n'a pas empêché le net ralentissement enregistré en Amérique du Nord, intéresse toutes les catégories de papier et carton, encore que pour le papier journal l'accroissement soit d'importance marginale. La production de papier d'impression et d'écriture en 1967 a atteint le niveau record de 20,4 millions de t.m., mais c'est surtout dans la catégorie des papiers non culturels et des cartons que l'augmentation a été importante. Grâce à cette expansion régulière de la production, le secteur de la pâte et du papier représentait en 1967 41% de la valeur totale de la production mondiale de produits forestiers, contre 36% en 1950 et 1960.

COMMERCE

Les échanges mondiaux de la plupart des produits forestiers, et en particulier des grumes et des panneaux ont de nouveau connu un essor considérable en 1967.

Les exportations de grumes de sciage et de placage ont atteint le volume sans précédent de 42 millions de m³, soit 11% de plus qu'en 1966 et plus de 10 fois autant qu'en 1957. Cette expansion tient surtout au maintien des exportations de grumes de feuillus d'Asie du Sud-est (qui représentent maintenant 68% du total mondial) et à l'essor rapide des exportations de grumes de résineux dans la plupart des régions de l'hémisphère nord: en Amérique du Nord, poursuivant leur montée en flèche, elles dépassent de 48% le volume de 1966, et représentent 53% du total mondial. Quant aux grumes de feuillus, les exportations africaines ont remonté pour la première fois depuis 1964. Les échanges de bois à pâte, rond ou débité, ont de nouveau augmenté en 1967 pour atteindre 14,7 millions de m³, soit 3% de plus qu'en 1966; en Europe, les exportations ont fait un bond de 16%, tandis qu'en Afrique l'expansion a été modérée. En revanche, les exportations nord-américaines ont fléchi de 0,45 millions de m³ par rapport à 1966, le commerce de bois à pâte se faisant de plus en plus sous forme de copeaux.

Les exportations mondiales de sciages de résineux ont amorcé une reprise pour la première fois depuis 1964. La baisse des exportations observée en Europe depuis 1964 semble avoir atteint un palier tandis que les importations ont commencé à augmenter. D'un autre côté, en Amérique du Nord, on enregistre une expansion vigoureuse, les exportations atteignant le niveau record de 17,7 millions de m³. Les importations des principaux pays importateurs, les Etats-Unis et le Royaume-Uni, ont beaucoup augmenté en 1967, tandis que celles de la République fédérale d'Allemagne marquent un fléchissement notable pour la deuxième année consécutive.

Les échanges mondiaux de sciage de feuillus sont restés pratiquement au même niveau qu'en 1966. Aucun changement important n'est intervenu dans la structure régionale du commerce, si ce n'est en Amérique du Nord, où les exportations ont diminué de 0,1 millions de m³, et en Afrique, où l'on note un léger fléchissement.

Les échanges mondiaux ont atteint des niveaux sans précédent en 1967 pour tous les panneaux, la valeur totale de ces exportations atteignant 775 millions de \$ E. U. C'est seulement pour les feuilles de placage que l'augmentation a été faible - 0,77 millions de m³ - tandis que les exportations de contreplaqué ont dépassé les 3 millions de m³, soit près du triple du volume de 1957. Ces deux catégories de produits continuent à jouer un rôle important dans les recettes de devises de l'Asie du sud-est: ils ont rapporté presque 190 millions \$ E. U. en 1967. C'est cependant, en Amérique du Nord que l'accroissement des exportations de contreplaqué est le plus fort: 25% par rapport à 1966. Les importations de contreplaqué ont beaucoup augmenté en Europe, dépassant de 20% le niveau de 1966, du fait surtout d'une progression de plus de 30% au Royaume-Uni, qui a absorbé en 1967 les deux tiers des importations européennes. Les exportations mondiales de panneaux de fibre se sont accrues de 10%, en raison surtout d'une forte augmentation des exportations européennes, qui ont atteint 0,91 millions de t. m. soit 80% du total mondial. Le Royaume-Uni, avec 290.000 t. m. en 1967, est resté de loin le premier importateur mondial.

Les échanges mondiaux de panneaux de particules ont de nouveau progressé considérablement, dépassant les 0,75 millions de t. m. Plus de 90% de ces échanges proviennent de pays européens.

Les exportations de pâte de bois ont atteint en 1967 le niveau record de 13,6 millions de t. m., ce qui représente une légère augmentation par rapport à 1966. L'expansion est due surtout aux fortes exportations d'Amérique du Nord qui, s'accroissant de 5% par rapport à 1966, ont compensé un léger fléchissement des exportations européennes. En 1967, les importations se sont accrues dans la plupart des régions du monde, sauf en Amérique du Nord; cette région a donc encore amélioré le solde déjà positif de son commerce de ces produits.

La valeur à l'exportation des produits de papier, a pour la première fois, dépassé les trois milliards de \$ E. U., le papier journal représentant 1.200 millions de \$ E. U., tandis que les papiers non culturels et le carton représentaient 1.350 millions de \$ E. U.

Parmi les produits de la pâte, l'expansion la plus forte est celle des exportations de papier d'impression et d'écriture, qui se sont accrues d'environ 5% par rapport à 1966. Par contre, les exportations de papier journal ont diminué d'environ 0,3 million de t. m., en raison surtout d'un fléchissement en Amérique du Nord, tandis que le commerce des autres régions est resté pratiquement au niveau de 1966. Les importations de papier d'impression et d'écriture se sont considérablement accrues en Europe, mais elles ont légèrement fléchi dans la plupart des autres régions à l'exception de l'Asie, où l'on enregistre un accroissement de plus de 25% par rapport à 1966. Les exportations de papiers non culturels et de carton se sont beaucoup accrues en Amérique du Nord, mais sont restées pratiquement stationnaires dans les autres régions. Les importations ont beaucoup augmenté en Europe, en Asie et en Afrique.

ASPECTOS SOBRESALIENTES DE LA PRODUCCION Y DEL COMERCIO MUNDIALES DE PRODUCTOS FORESTALES EN 1967

PRODUCCION

El valor de la producción mundial de productos forestales en 1967 ascendió a 43.100 millones de \$ EE.UU. (sobre la base de precios constantes de 1960), o sea, 2% más que la cifra correspondiente a 1966. En el Cuadro I puede apreciarse el cambio registrado en la estructura del desarrollo de los distintos grupos de productos desde 1950 y su importancia relativa. Aunque en muchas regiones, especialmente en los países menos industrializados, la cobertura estadística puede ser insuficiente, en este Cuadro se reflejan las tendencias generales del rápido desarrollo de la producción forestal.

Cuadro I - Valor de la producción mundial ^a
(1,000 millones \$ EE. UU.)

| | | 1950 | 1960 | 1965 | 1967 ^b |
|------------------------------|---|-------------|-------------|-------------|-------------------|
| Madera | | | | | |
| manufacturada | c | 10,3 | 13,5 | 15,1 | 15,0 |
| Paneles | d | 1,0 | 2,7 | 4,4 | 4,9 |
| Productos de pulpa | e | 8,7 | 12,2 | 16,2 | 17,8 |
| Otros productos de la madera | | 3,9 | 5,5 | 5,3 | 5,4 |
| Total | | 23,9 | 33,9 | 41,0 | 43,1 |

a Precio constante (base 1960).

b Provisional.

c Madera aserrada, durmientes, tablas para cajones.

d Chapas, madera terciada, tableros de partículas, tableros de fibra.

e Papel y cartón.

estos tres productos es naturalmente mucho más elevada en las regiones industrializadas, resulta sumamente alentador observar que el ritmo de su producción es igual, si no es relativamente más rápido, en las regiones en desarrollo, lo que no solamente contribuye a alcanzar un mejor nivel de vida, sino que sirve también para mejorar la situación de la balanza de pagos.

Durante 1967 continuó la expansión de las industrias de la pasta el papel, alcanzando una producción total de 17.800 millones de \$ EE.UU., cifra ligeramente superior a la de 1966. No obstante, este aumento se alcanzó a pesar del gran descenso de la producción experimentado en América del Norte. La expansión se produjo en todas las clases de papel y cartón, pero la producción mundial de papel para periódicos aumento sólo marginalmente. La producción de papel de imprenta y de escribir alcanzó en 1967 una cantidad máxima de 20,4 millones t. m., pero el mayor aumento se produjo en la categoría de papeles para fines no culturales y cartón. Con esta producción, que aumenta de un modo regular, correspondió al sector de la pasta y el papel en 1967 el 41% del valor total de la producción mundial de productos forestales en comparación con el 36% en 1950 y en 1960.

COMERCIO

El comercio mundial de los productos forestales volvió a aumentar considerablemente respecto a la mayoría de los productos y, especialmente, por lo que se refiere a la madera en rollo y a los paneles a base de madera.

Las exportaciones de trozas para aserrío y para chapas alcanzó un total sin precedentes de 42 millones m³, lo que constituye un aumento de un 11% respecto a la cifra de 1966 y un aumento de más de diez veces en un período de diez años. Factores principales de esta expansión son el constante comercio de trozas de frondosas en el sureste de Asia (que representa actualmente el 68% del comercio mundial y el volumen de exportaciones, que aumenta rápidamente, de trozas de coníferas en la mayoría de las regiones del hemisferio norte. Las exportaciones de trozas de coníferas de América del Norte, continúan aumentando muy rápidamente, habiéndose producido un incremento del 48% respecto a la cifra de 1966, y su volumen corresponde al 53% del total mundial. Respecto a las trozas de frondosas, las exportaciones se han recuperado en África por primera vez desde 1964. El comercio de la madera para pasta (en rollo o en astillas) aumentó de nuevo en 1967, llegando a una cifra de 14,7 millones m³, lo que representa un aumento de un 3% respecto a la cifra de 1966, habiéndose producido un incremento espectacular del 16% las exportaciones en Europa y una ligera expansión en África. Sin embargo, las exportaciones de América del Norte disminuyeron considerablemente, con 0,45 millones m³ menos que en 1966, ya que el comercio de madera para pasta se hace cada vez más a base de astillas de madera.

Las exportaciones mundiales de madera aserrada de coníferas han comenzado a aumentar de nuevo por primera vez desde 1964. La disminución de las exportaciones que se produjo en Europa desde 1964, parece que se está nivelando, en tanto que ha comenzado a aumentar el volumen de las importaciones. Por otra lado, en América del Norte se ha

producido una fuerte expansión habiendo llegado las exportaciones a un volumen sin precedentes de 17,7 millones m³. El volumen de las importaciones en los principales países importadores, Estados Unidos y Reino Unido, aumentó considerablemente en 1967, pero disminuyó en forma marcada en la República Federal de Alemania por segundo año consecutivo.

El comercio mundial de madera aserrada de frondosas continuó prácticamente al mismo nivel en 1967, comparado con el de 1966. No se han producido cambios importantes en el cuadro comercial regional, excepto por lo que se refiere a América del Norte, donde las exportaciones han disminuido en 0,1 millones m³, y en África donde se ha observado un ligero descenso.

El comercio mundial de paneles volvió a alcanzar nuevas cifras sin precedentes en 1967, alcanzando las exportaciones un valor total de 775 millones de \$ EE. UU. Únicamente el aumento fue ligero en el caso de las exportaciones de hojas para chapas, alcanzando 0,77 millones m³, pero las exportaciones de tableros contrachapados llegaron a la cifra de 3 millones m³, lo que constituye casi tres veces, más que la cifra de 1957. Ambos productos continúan desempeñando su importante papel como devengadores de divisas para el sureste de Asia, ya que produjeron casi 190 millones \$ EE. UU. en 1967. Sin embargo, fue en América del Norte donde se ha producido la mayor expansión de las exportaciones de tableros contrachapados, con un aumento del 25% respecto a la cifra de 1966. Las importaciones de tableros contrachapados han aumentado enormemente en Europa habiéndose registrado un incremento de un 20% respecto a la cifra de 1966, principalmente debido a un aumento de más del 30% de las importaciones del Reino Unido que, en 1967, representaron 2/3 de las importaciones de Europa. Las exportaciones mundiales de tableros de fibra aumentaron en un 10%, debido principalmente al fuerte aumento registrado en las exportaciones de Europa, alcanzando un volumen de 0,91 millones t. m. lo que representa el 80% de la cifra mundial total. El Reino Unido que importó 290.000 t. m. en 1967 continúa siendo con mucho el mayor importador del mundo.

El comercio mundial de los tableros de partículas volvió a registrar un aumento importante llegando a la cifra de 3/4 millones t. m. Más del 90% de este comercio procede de los países europeos.

Las exportaciones de pasta de madera llegaron en 1967 a alcanzar una cifra sin precedentes, con 13,6 millones t. m., lo que constituye un ligero aumento respecto a la cifra de 1966. Esto se debió principalmente al gran volumen de exportaciones norteamericanas que aumentó en un 5% respecto a 1966, contrarrestando la ligera disminución que se registró en las exportaciones europeas. Las importaciones en 1967 aumentaron en la mayoría de los países, excepto en América del Norte, con lo que de esta forma aumentó de nuevo su balanza comercial favorable de este producto.

El valor de las exportaciones de los productos de papel sobrepasaron por primera vez la cifra de 3.000 millones \$ EE. UU.; de esta cifra corresponde al papel para periódicos 1.200 millones \$ EE. UU., y al papel para fines no culturales y al cartón 1.350 \$ EE. UU.

La expansión del comercio mundial de los productos de la pasta fue máxima por lo que se refiere a las exportaciones del papel para imprenta y para escribir, que aumentaron en un 5% aproximadamente en 1967 respecto a la cifra de 1966. Por otro lado, las exportaciones de papel para periódicos disminuyeron en 0,3 millones t. m. aproximadamente, debido principalmente a una disminución que se registró en el comercio de Norteamérica, en tanto que el comercio de las otras regiones permaneció prácticamente al mismo nivel de 1966. Las importaciones de papel para imprenta y para escribir aumentaron considerablemente en Europa y disminuyeron ligeramente en la mayoría de las demás regiones, excepto en Asia, donde se registró un fuerte aumento de más del 25% respecto a la cifra de 1966. Las exportaciones de papel para fines no culturales y cartón aumentaron fuertemente en América del Norte, pero permanecieron prácticamente estables en otras regiones. Las importaciones aumentaron considerablemente en Europa, Asia y África.

NOTE: The figures in these articles and in diagrams A, B and C may differ slightly from data in the statistical tables because of final corrections made in the latter on the basis of last-minute information.

The definition of all terms and product groups are given in Appendix I. The regions used in tables IIA and IIIA are the same as those used in the statistical tables; for tables IIB and IIIB attention is drawn to the following differences:

| | | |
|---------------------|---|--|
| Latin America | : | Central and South America |
| Africa | : | does not include South Africa |
| Asia-Pacific | : | includes Near East, but does not include China (mainland), Japan, Australia, New Zealand |
| Other | : | groups Japan, Australia, New Zealand and South Africa |
| Industrialized | : | groups all countries of North America, Europe, USSR and the "Other" category specified above |
| Less-industrialized | : | all other countries |

NOTE: En raison de corrections apportées en dernière minute aux tableaux statistiques, il peut y avoir de légères différences entre les chiffres de ces tableaux et ceux des deux présents articles et des graphiques A, B et C.

Les définitions de tous les termes et groupes de produits se trouvent à l'Annexe I. Les régions figurant dans les tableaux IIA et IIIA sont les mêmes que celles des tableaux statistiques; pour les tableaux IIB et IIIB, on attire l'attention sur les différences suivantes:

| | | |
|-----------------------|---|--|
| Amérique latine | : | Amérique centrale et du Sud |
| Afrique | : | ne comprend pas l'Afrique du Sud |
| Asie-Pacifique | : | comprend le Proche-Orient, mais ne comprend pas la Chine continentale, le Japon, l'Australie et la Nlle-Zélande |
| Autres | : | réunit le Japon, l'Australie, la Nlle-Zélande et l'Afrique du Sud |
| Industrialisées | : | réunit tous les pays de l'Amérique du Nord, de l'Europe, de l'URSS ainsi que la catégorie "Autres" définie ci-dessus |
| Moins-industrialisées | : | tous les autres pays |

NOTA: Las cifras que figuran en estos artículos y en los gráficos A, B y C pueden presentar ligeras diferencias con los datos que figuran en los cuadros estadísticos debido a las correcciones definitivas introducidas en estos últimos a base de datos de última hora.

En el Apendice I se dan las definiciones de todos los terminos y grupos de productos. Las regiones empleadas en los cuadros IIA y IIIA son las mismas que se emplean en los cuadros estadísticos; en los cuadros IIB y IIIB hay que observar las siguientes diferencias:

| | | |
|------------------------|---|---|
| América latina | : | América central y del Sur |
| Africa | : | excluye Africa del Sur |
| Asia-Pacífico | : | incluye el Cercano Oriente, pero excluye la China continental, Japón, Australia, Nueva Zelandia |
| Otros | : | agrupa Japón, Australia, Nueva Zelandia y Africa del Sur |
| Industrializadas | : | agrupa todos los países del América del Norte, Europa, URSS y "Otros", categoría que se define más arriba |
| Menos-industrializadas | : | Todos los otros países |

PER CAPUT CONSUMPTION OF WOOD PRODUCTS OVER THE 1955-1965 DECADE

This article reviews a series of per caput consumption data for sawnwood and wood-based panel products. These data represent averages for the periods 1954 - 56, 1959 - 61 and 1964 - 66. To allow a meaningful interpretation it is useful to explain briefly how they have been calculated, and to draw attention to the shortcomings and limitations of the statistics used. By adding on a country basis production plus imports minus exports, averaged over a three year period, and dividing by the mid-year population figure, a per caput apparent consumption figure is obtained which reduces the incidence of stockchanges and of incidental annual deviations from the general pattern.

The 1967 data have not yet been used for these calculations, as at the time of writing, many of the revisions were not yet available. Those available at the last moment have been inserted in the statistical tables contained in this volume, and can be used to compute similar, though provisional figures for that year.

A further word of caution may be necessary to qualify these data. The difference in quality between the statistics from the industrialized countries and those from the developing countries is well known, and data derived from them are inevitably of qualified validity. This distinction is more important for production data than for trade data, and this has a serious incidence on the results where local production rather than imports or exports determines the consumption. It may lead to consumption data 20 - 30% too low in many developing countries, especially for sawnwood. For panel products, the inadequacy of the trade data makes the picture even more uncertain. Often a local production exists, but is mainly export oriented; in other cases, the local consumption depends largely on imports. Inadequacies in one or the other series of data make these consumption data not more than a general indication of the level of consumption in most of the developing countries.

In the tables of this article, the countries are given by continents and the continents listed from the date-line on eastwards. In the summary tables the continental grouping has been slightly departed from by separating Japan, Australia, New Zealand and South Africa from their respective regions, because of the more industrial degree of their economy. The totals for these four countries are shown in a separate "Other" category. China (mainland) has also been separated from the Asia and Pacific Area because of the very different nature of information on which its data are based. Finally, the data of the "industrialized countries" cover North America, Europe, USSR and the special "Other" category. The data of "developing countries" cover all other countries.

Taking due consideration of the limitations mentioned above, these per caput consumption trends of sawnwood and wood-based panels could be summarily described as follows:

Over the last decade per caput consumption of sawnwood increased in the developed countries by about 8%. In the developing countries population growth seems to have been as strong as the increase in the recorded sawnwood consumption. However, there is evidence that real consumption is considerably higher than the incomplete statistical coverage seems to indicate.

North America remains the leading consumer of sawnwood. After a sharp drop from 1955 until 1960 per caput consumption increased again and in 1965 stood 10% higher than in the USSR. In the USSR the trends were exactly the opposite, a sharp increase of more than 20% in the first period, followed by a 5% decrease when comparing 1965 with 1960. Europe showed a slow but steady increase, though its general per caput consumption level remains less than 40% of that of North America. The "Others" category (Australia, Japan, New Zealand and South Africa) showed a very considerable growth, bringing it in a decade close to the average consumption level of the industrialized nations. In China (mainland), the consumption level is estimated to have remained about the same level, about 10% below the average level of the developing countries. The rest of Asia and the Pacific islands have seen a 10% increase in their consumption level, but in absolute figures it remains at about 13m³ per 1000 capita, a region of extremely low consumption. In Africa consumption levels are also very low. In addition, Latin America (despite its tremendous forest resources) does not show an encouraging picture, with per caput consumption data decreasing; but admittedly the statistical quality of its production data is very inadequate.

At the world level per caput consumption of wood-based panels more than doubled in one decade. Plywood, whose consumption is still expanding rapidly, remains by far the most important wood panel product. In 1965 the world per caput consumption topped 7m³ per 1000 capita. The strong growth in importance of this product is found in the developed as well as in the developing regions, with a per caput consumption practically doubling in all regions of the world, except in the USSR, where over this decade per caput consumption increased by only one third. If Europe this trend was also slightly slower than the world average, but in Japan and in some neighbouring areas in South East Asia, the expansion was considerably faster. North America remains by a wide margin the leading consumer with a consumption level about ten times the world average, and three times the average for the industrialized countries. On the other hand, it is encouraging to note that consumption in developing countries followed a similar pattern even though the absolute level remains extremely low.

Particle board, a product which practically only emerged in the early fifties, continued its rapid expansion to reach in 1964 - 66 a world per caput consumption level about one third that of plywood. Growth was fast in all regions, industrialized and developing, but the leading consumer is Europe with a consumption level five times the world average, and 60% higher than the average for the industrialized regions. Consumption in the USSR started late, but is increasing very fast indeed. In the developing regions the statistical validity of the data is so weak, however, that it only allows an evaluation in very broad terms. The consumption level is very low, about 5% of the world average but fortunately even the weak evidence available points towards a rapid increase.

The world average of per caput consumption of fibreboard, rose by only 66% over the decade under review to reach in the mid-sixties 2.9 m³ per 1000 capita. North America, the most important consumer, reached a per caput consumption level more than 6 times the world average and slightly more than double the average for the industrialized regions. However, its per caput consumption rose only by about a quarter, whereas this figure more than doubled in most other industrialized regions, except for the USSR where consumption rose much faster from a low 1955 level to a level of 1.7 m.t. or 2.7 m³ per 1000 capita by 1965, which is still slightly below the world average. In the developing regions, the production and trade data for fibreboard remain, as for particle board, definitely weak. Nevertheless, it can be accepted that consumption on a per caput basis is rising fast but remains at a very low level, about 10% of the world average.

Conclusion

Despite the fast growing world population it is worth pointing out the general rise in the per caput consumption of wood products in practically all countries, developing as well as developed. This growth is strongest for the wood-based panel products, which admittedly started from a lower level, but also sawnwood made considerable progress in many industrially advanced countries.

Broadly speaking, the consumption of wood products grows with rising income, even though other factors besides income play a role. Graph B in this volume illustrates the trends over time of per caput consumption by region of sawnwood, plywood, particle board and fibreboard. In graph C the 1965 per caput consumption of these products is plotted (on a log scale) for 50 selected countries against per caput GDP data. On the same graph the corresponding data for 1955, '60 and '65 are given for the regions and the world. The emerging picture illustrates the extent of the positive income consumption relationship for the four products under review.

CONSOMMATION DE PRODUITS DU BOIS PAR HABITANT ENTRE 1955 ET 1965

On analyse ci-dessous une série de données sur la consommation de sciages et de panneaux dérivés du bois par habitant. Il s'agit de moyennes pour les périodes 1954-56, 1959-61, 1964-66. Pour faciliter leur interprétation, il convient d'exposer rapidement les méthodes de calcul et d'attirer l'attention sur les lacunes et les limitations des statistiques employées. Pour chaque pays, on a calculé la consommation apparente par habitant en divisant par le nombre d'habitant en milieu d'année la somme de la production et des importations diminuée des exportations sur une moyenne de 3 ans; cette façon de procéder permet de réduire l'effet des variations de stocks et des fluctuations annuelles accidentelles autour de la tendance générale.

On n'a pas pu utiliser pour ces calculs les données de 1967 car fort peu de chiffres révisés étaient connus avant la rédaction du présent article. Ceux qui ont été communiqués au dernier moment ont été insérés dans les tableaux statistiques qui figurent dans le corps du volume, ils peuvent être utilisés pour mettre à jour les moyennes, encore que sur une base provisoire.

Un avertissement s'impose; la qualité de ces données est très différente selon qu'elles proviennent de pays industrialisés ou de pays en voie de développement, ce qui influe inévitablement sur la validité des chiffres calculés à partir de ces statistiques. Cela vaut encore plus pour les données relatives à la production que pour les données relatives au commerce, de sorte que la marge d'erreur est plus grande dans les cas où c'est la production locale plutôt que les importations qui détermine la consommation. Dans de nombreux pays en voie de développement, il peut en résulter une sous-estimation de la consommation de l'ordre de 20 à 30%, surtout pour les sciages. Pour les panneaux, les défauts des statistiques commerciales rendent ces estimations encore plus incertaines. Souvent, il existe une production locale mais celle-ci est essentiellement destinée à l'exportation; dans d'autres cas la consommation locale dépend essentiellement des importations. Dans la plupart des pays en voie de développement les inexactitudes de l'une ou l'autre série de données sont telles que les statistiques de la consommation ne donnent guère plus qu'une indication générale du niveau de la consommation.

Dans les tableaux du présent article, les pays sont groupés par continents et les continents sont énumérés d'ouest en est à partir de la ligne de changement de date. Dans les tableaux récapitulatifs on s'est quelque peu écarté du classement par continent en séparant le Japon, l'Australie, la Nouvelle-Zélande et l'Afrique du Sud des régions auxquelles ils appartiennent, en raison de leur degré d'industrialisation plus poussé. Les totaux pour ces quatre pays figurent dans une catégorie distincte intitulée "autres". Les chiffres concernant la Chine continentale sont également donnés séparément de ceux qui intéressent l'Asie et la région du Pacifique parce que les renseignements sur lesquels ils reposent ne sont pas de même nature. Enfin, la rubrique "pays industrialisés" groupe l'Amérique du Nord, l'Europe, l'U.R.S.S. et la catégorie spéciale des "autres pays", et la rubrique "pays en voie de développement", le reste du monde.

Compte tenu des limitations mentionnées ci-dessus, ces tendances de la consommation de sciages et de panneaux dérivés du bois par habitant peuvent se résumer comme suit:

Depuis dix ans la consommation de sciages par habitant s'est accrue d'environ 8% dans les pays développés. Dans les pays en voie de développement, la croissance démographique semble avoir été aussi forte que l'accroissement de la consommation de sciages enregistrée. Cependant, tout porte à croire que la consommation réelle est beaucoup plus élevée qu'il n'apparaît d'après les statistiques incomplètes.

L'Amérique du Nord reste le premier consommateur de sciages. Après une baisse brutale entre 1955 et 1960, la consommation par habitant a marqué une reprise et, en 1965, elle dépassait de 10% celle de l'U.R.S.S. Dans ce dernier pays la consommation a suivi une marche inverse; elle s'est accrue de plus de 20% pendant la première

période pour diminuer de 5% entre 1960 et 1965. En Europe, l'augmentation a été lente mais régulière; la consommation moyenne par habitant est toutefois restée de 40% inférieure à ce qu'elle est en Amérique du Nord. Dans les "autres pays" (Australie, Japon, Nouvelle-Zélande et Afrique du Sud) une augmentation très rapide a amené en dix ans la consommation à un niveau très proche de la moyenne des pays industrialisés. En Chine continentale, on estime que la consommation est restée à peu près stationnaire, à un niveau d'environ 10% inférieur à celui des pays en voie de développement. Le reste de l'Asie et les îles du Pacifique malgré une augmentation de 10% de la consommation par habitant restent des régions de consommation très basse (environ 13 m³ par millier d'habitants). En Afrique, la consommation est aussi très faible. L'Amérique latine, en dépit de ses énormes richesses forestières ne présente pas non plus un tableau très encourageant; les chiffres de la consommation par habitant tendent à baisser; cependant, la qualité des statistiques de la production laisse beaucoup à désirer.

A l'échelon mondial, la consommation de panneaux dérivés du bois par habitant a plus que doublé en dix ans. Le contreplaqué, dont la consommation s'accroît encore rapidement, reste de loin le plus important panneau dérivé du bois. En 1965, la consommation dans le monde dépassait 7 m³ par millier d'habitants. La progression considérable de ce produit depuis dix ans se manifeste aussi bien dans les régions développées que dans les régions en voie de développement, la consommation par habitant ayant pratiquement doublé dans toutes les régions du monde à l'exception de l'U. R. S. S. où elle ne s'est accrue que d'un tiers. En Europe, l'expansion est aussi restée légèrement en deçà de la moyenne mondiale, mais au Japon et dans certaines régions voisines du Sud-est asiatique elle l'a de loin dépassée. L'Amérique du Nord reste de loin le principal consommateur, avec une consommation par habitant qui est environ le décuple de la moyenne mondiale et le triple de celle des pays industrialisés. D'un autre côté, il est encourageant de noter que la consommation dans les pays en voie de développement évolue de façon analogue quoiqu'en chiffres absolus elle reste encore très faible.

Pour les panneaux de particules, produit qui pratiquement n'est apparu qu'au milieu des années 50, l'expansion rapide s'est poursuivie et la consommation moyenne par habitant dans le monde a atteint en 1964-66 un niveau équivalent au tiers environ de la consommation de contreplaqué. L'expansion a été rapide dans toutes les régions, tant industrialisées qu'en voie de développement, mais l'Europe vient en tête avec une consommation par habitant quintuple de la moyenne mondiale et de 60% supérieure à la moyenne des régions industrialisées. En U. R. S. S. la consommation a commencé tard, mais elle progresse très rapidement. Dans les régions en voie de développement, la qualité des statistiques est si mauvaise qu'elle ne permet qu'une évaluation très générale. La consommation est très basse, environ 5% seulement de la moyenne mondiale, mais selon les données incertaines dont on dispose l'accroissement y est cependant rapide.

La moyenne mondiale de la consommation de panneaux de fibre par habitant ne s'est accrue que de 66% pendant les dix ans étudiés, pour atteindre 2,9 m³ par millier d'habitants au milieu des années 60. En Amérique du Nord, le principal consommateur, la consommation par habitant est le sextuple de la moyenne mondiale, et légèrement plus du double de la moyenne des régions industrialisées. Cependant, la consommation par habitant ne s'est accrue que d'un quart, tandis qu'elle a plus que doublé dans la plupart des autres régions industrialisées sauf en U. R. S. S., où elle a augmenté beaucoup plus rapidement; partie en 1955 d'un niveau très faible, elle atteignait en 1965 1,7 t. m. ou 2,7 m³ par millier d'habitants, ce qui est toutefois encore légèrement inférieur à la moyenne mondiale. Dans les régions en voie de développement, les statistiques de la production et de la consommation restent nettement insuffisantes pour les panneaux de fibre comme pour les panneaux de particules. Cependant, on peut admettre que la consommation par habitant s'accroît rapidement mais est encore très basse, ne dépassant guère 10% de la moyenne mondiale.

Conclusion

Malgré l'expansion rapide de la population mondiale, il convient de signaler l'augmentation générale de la consommation par habitant de produits du bois dans presque tous les pays, en voie de développement aussi bien que développés. Cette expansion est surtout marquée pour les panneaux dérivés du bois, dont toute fois le niveau de départ était plus bas; mais les sciages ont marqué aussi des progrès considérables dans de nombreux pays industrialisés.

En général, la consommation de produits du bois s'élève avec l'augmentation des revenus, même si ce facteur n'est pas le seul à jouer un rôle à cet égard. Le graphique B illustre l'évolution dans le temps de la consommation par habitant dans chaque région pour les sciages, le contreplaqué, les panneaux de particules et les panneaux de fibre. Le graphique C indique, sur une échelle doublement logarithmique, le rapport entre la consommation par habitant de ces produits dans 50 pays et le PIB par habitant. Sur le même graphique sont portées les données correspondantes de 1955, 1960 et 1965 pour les diverses régions et pour le monde entier. On voit nettement apparaître la corrélation positive entre le revenu et la consommation pour les quatre produits étudiés.

CONSUMO POR PERSONA DE PRODUCTOS MADEREROS EN EL DECENIO 1955-1965

En este artículo se examina una serie de datos del consumo por persona de madera aserrada y paneles a base de madera. Estos datos representan los promedios para los períodos 1954-56, 1959-61 y 1964-66. Para poder hacer una interpretación significativa resultará útil explicar brevemente en qué forma se han calculado, y debían tenerse presentes las deficiencias y limitaciones de las estadísticas empleadas. Si a la suma de la producción por países se añaden las importaciones y se restan las exportaciones, y se calcula el promedio de un trienio, y luego se divide por la cifra de población correspondiente a mediados de año, se obtiene una cifra de consumo aparente por persona que reduce la incidencia de las variaciones de las existencias y las desviaciones incidentales anuales del cuadro general.

Para hacer estos cálculos no se han utilizado los datos de 1967, ya que en el momento de redactar estas notas no se disponía todavía de muchas de las revisiones. Aquellas con las que se ha podido contar en el último momento, se han insertado en los cuadros estadísticos que figuran en este volumen, y pueden emplearse para calcular cifras similares, aunque provisionales, para dicho año.

Quizás sea necesario hacer otra advertencia para calificar estos datos. Es bien conocida la diferencia de calidad que existe entre las estadísticas de los países industrializados y las de los países en desarrollo, los datos que se derivan de estas últimas tienen inevitablemente una validez limitada. Esta distinción es más importante para los datos de producción que para los datos de comercio, y esto tiene una incidencia grave en resultados en que el consumo viene determinado por la producción local más que por las importaciones o las exportaciones. Este hecho puede hacer que los datos que se obtengan sobre el consumo sean del 20 al 30% más bajos que los correspondientes a los países en desarrollo, especialmente respecto al consumo de madera aserrada. Respecto a los paneles, la insuficiencia de los datos de comercio hace el cuadro todavía más incierto. Frecuentemente existe una producción local, pero ésta, principalmente, está orientada a la exportación; en otros casos, el consumo local depende mayormente de las importaciones. Las imperfecciones en una otra serie de datos hace que estos datos de consumo no sean más que una indicación general del nivel de consumo de la mayoría de los países en desarrollo.

En los cuadros de este artículo, los países se indican por continentes, los continentes se enumeran, a partir de la línea geográfica de cambio de fecha, hacia el este. En los cuadros resúmenes se ha prescindido un poco del agrupamiento continental, separando Japón, Australia, Nueva Zelandia y Sudafrica de sus regiones respectivas, debido al mayor grado de industrialización de su economía. Los totales correspondientes a estos cuatro países se indican en una categoría separada titulada "otros". China (Continental) se ha separado también de Asia y de la zona del Pacífico, debido a la naturaleza de información muy diferente sobre la que se han basado sus datos. Por último, los datos de los "países industrializados" comprenden América del Norte, Europa, la U. R. S. S. y la categoría especial "Otros". Los datos de los "países en desarrollo" comprenden todos los demás países.

Teniendo en cuenta debidamente las limitaciones mencionadas anteriormente, estas tendencias del consumo por persona de madera aserrada y de paneles a base de madera pueden describirse brevemente en la forma siguiente:

Durante el último decenio, el consumo por persona de madera aserrada aumentó en los países desarrollados en un 8%, aproximadamente. En los países en desarrollo, el aumento de la población parece ser que ha sido tan elevado como el aumento del consumo registrado de madera aserrada. No obstante, existen pruebas de que el consumo real es considerablemente mayor que lo que parecen indicar los datos estadísticos incompletos.

América del Norte continúa siendo el principal consumidor de madera aserrada. Después de un descenso acentuado que duró de 1955 a 1960, el consumo por persona aumentó de nuevo y, en 1965, fue 10% más elevado que en la U. R. S. S. En la U. R. S. S. si se comparan las cifras de 1965 con las de 1960 las tendencias fueron exactamente lo contrario. Un fuerte aumento de más del 20% en el primer período, seguido de una disminución del 5%. Europa registró un lento pero continuo aumento, aunque su consumo general per persona continúa siendo menos del 40% del de América del Norte. La categoría "Otros" (Australia, Japón, Nueva Zelandia y Sudafrica) registraron un aumento muy considerable, y se elevó un decenio a casi el nivel del consumo medio de los países industrializados. En China (Continental) se estima que el nivel del consumo ha continuado siendo más o menos el mismo, es decir, un 10% por debajo del nivel medio de los países desarrollados. El resto de Asia y de las islas del Pacífico han registrado un aumento del 10% en su nivel de consumo, pero en cifras absolutas, continúa siendo de unos 13 m³ por 1000 personas, y, por esto, constituye una región de un consumo extremadamente bajo. En Africa, los niveles de consumo son también muy bajos. Además, América Latina (a pesar de sus tremendos recursos forestales) no presenta un cuadro muy alentador, ya que han bajado sus cifras relativas al consumo per persona; sin embargo, hay que tener en cuenta que la calidad de los datos estadísticos relativos a su producción es muy insuficiente e imperfecta.

El nivel mundial del consumo per capita de paneles de madera se ha más que duplicado en una década. La madera contrachapada, cuyo consumo continúa aumentando rápidamente, sigue siendo con mucho entre los paneles a base de madera el producto más importante. En 1965, el consumo mundial por persona llegó a 7 m³ por 1000 personas. El intenso aumento de la importancia de este producto se ha registrado tanto en las regiones desarrolladas como en las que están en fase de desarrollo, con un consumo per persona que, prácticamente, es el doble en todas las regiones del mundo, excepto en la U. R. S. S., donde, durante este decenio el consumo per persona aumentó solamente en un tercio. En Europa, esta tendencia fue también ligeramente más lenta que el promedio mundial, pero en el Japón y en algunas zonas vecinas del sudeste de Asia, la expansión fue considerablemente más rápida. América del Norte continúa siendo, con un gran margen, el principal consumidor, con un nivel de consumo de aproximadamente diez veces el promedio mundial, y tres veces el promedio de los países industrializados. En cambio, es alentador observar que el consumo de los países en desarrollo presenta un

cuadro similar, aunque el nivel absoluto continúa siendo extremadamente bajo.

Los tableros de partículas, un producto que prácticamente no apareció hasta los primeros años cincuenta, continuó su rápida expansión para llegar, en 1964-66, a un nivel de consumo por persona de aproximadamente un tercio del correspondiente a la madera contrachapada. El aumento fue rápido en todas las regiones, en las industrializadas y en las que se encuentran en desarrollo, pero el consumidor principal es Europa, con un nivel de consumo cinco veces el promedio mundial, y 60% más elevado que el promedio de las regiones industrializadas. El consumo en la U. R. S. S. comenzó tarde, pero actualmente está aumentando muy rápidamente. En las regiones en desarrollo, la validez estadística de los datos es tan débil que solamente puede hacerse una evaluación en términos muy generales. El nivel de consumo es muy bajo, aproximadamente 5% del promedio mundial, pero, afortunadamente, incluso la imperfecta información de que se dispone señala un aumento rápido.

El promedio mundial del consumo por persona de tableros de fibra aumentó solamente en un 66% respecto al decenio objeto de este examen, para llegar a un consumo en la mitad de los años sesenta de 2,9 m³ por 1,000 personas. América del Norte, el consumidor más importante, llegó a un nivel de consumo per capita superior a seis veces el promedio mundial, y ligeramente más del doble del promedio correspondiente a las regiones industrializadas. No obstante, su consumo por persona aumentó solamente en un cuarto aproximadamente, en tanto que esta cifra fue más del doble en la mayoría de las otras regiones industrializadas, excepto en la U. R. S. S. donde el consumo aumentó mucho más rápidamente desde un bajo consumo, en 1955, hasta un nivel de 1,7 t. m. o 2,7 m³ por 1.000 personas en 1965, cifra que continúa siendo algo más baja que el promedio mundial. En las regiones en desarrollo, los datos de producción y de comercio para los tableros de fibras, como también para los tableros de partículas continúan siendo definitivamente imperfectos. Sin embargo, puede aceptarse que el consumo por persona aumenta rápidamente, pero continúa manteniéndose a un nivel muy bajo, aproximadamente el 10% del promedio mundial.

Conclusión

A pesar del rápido aumento de la población mundial merece la pena señalarse el aumento general en el consumo por persona de productos madereros en prácticamente todos los países, tanto en los desarrollados como en los que se encuentran en fase de desarrollo. Este aumento es más acentuado por lo que respecta a los paneles a base de madera que, como se sabe, comenzaron a un nivel más bajo, pero también la madera aserrada hizo considerables progresos en muchos países industrialmente avanzados.

Hablando en términos generales, el consumo de los productos madereros aumenta conforme aumenta la renta, incluso aunque también otros factores además de la renta sean importantes. El gráfico B de este volumen ilustra las tendencias registradas a lo largo del tiempo del consumo por persona, por regiones, de madera aserrada, contrachapados, y tableros de partículas y de fibra. En el gráfico C se ha trazado el consumo per persona correspondiente a 1965 de estos productos (en una escala de logaritmo) de cincuenta países seleccionados en función de los datos de PIB per capita. En el mismo gráfico se indican los datos correspondientes a 1955, 60 y 65 para las diversas regiones y el mundo. El cuadro que se obtiene ilustra el grado de relación positiva que existe entre el consumo y la renta para los cuatro productos objeto de este examen.

I. GENERAL NOTES

Presentation of the statistics - All tables contain data for 1966 and 1967, except as otherwise noted, available as on 15 september 1968.

Conversions to metric units are made, wherever necessary, by use of the factors given in the Appendix (page 150). More information on the problem of conversion is given in the technical Notes on page XXXVI.

Data are subject to revision by governments, and are then published as "revised" figures. In general, figures less than 10 are given to one decimal place if available; in some tables, this rule is applied to all figures. It is the general procedure to round half-units to the nearest even-numbered unit. Values are expressed in United States dollars, with local currency values converted to dollars by use of exchange rates given in table M 3. A few countries report value figures in U. S. dollars without specifying the exchange rates used in the conversion.

Each table is as complete as possible, even though secretariat estimates in some cases may necessarily be based on meagre information. Within each region countries are arranged in English alphabetical order. Regional totals includes only the countries listed.

For a number of tables the figures require more explanation and qualification than is possible in the footnotes to the individual tables. Appropriate reference will therefore be found to the Country Notes, page XXXIII.

Statistical contents - On the recommendation of the Joint FAO/ECE Working Party on Forest and Forest Products Statistics, statistics on boxboards are not published separately, but included in the statistics on sawnwood. This Working Party also agreed upon a new definition for "pulpwood" (see Appendix I), as a basis for statistical reporting. The information published with regard to trade of pulpwood has been completed accordingly.

Geographical designations - The designations employed and the presentation of the material in this publication and maps do not imply the expression of any opinion whatsoever on the part of the Food and Agriculture Organization of the United Nations concerning the legal or constitutional status of any country, territory or sea area, or concerning the delimitation of frontiers.

In so far as possible, the countries are listed according to their "de facto" situation at the end of 1966. Some explanatory notes on the listed countries follow :

Ethiopia : Ethiopia and Eritrea, Federation of
Equatorial Guinea : former Spanish Guinea
French territory of the Afars and the Issas : former French Somaliland
Malaysia :
 West Malaysia
 Sabah
 Sarawak
Nigeria : includes Cameroon (Br. Adm.)
Portugal : production figures exclude Azores and Madeira
South Africa : all figures include South-West Africa ; import figures include Lesotho and Swaziland, export figures include Lesotho.
Spain : trade with Equatorial Guinea is considered to be internal trade ; therefore does not appear in the statistics
West Indies Federation : countries are listed under their individual names

SYMBOLS

SITC = Standard International Trade Classification, Revised. a/
m³ (r) = Cubic metre of roundwood
m³ (s) = Cubic metre of sawnwood
r. e. = Roundwood equivalent
m. t. = Metric ton
- = Nil or less than half the appropriate unit
.. = Not available
* = Unofficial figure
‡ = See country notes
() = Figure known to be incomplete
■ = Revised figure
A full stop (.) precedes decimal figures
=000= = Figure received too late for inclusion in totals

a/ Statistical Papers, Series M, No. 34, United Nations, New York, 1961.

I. REMARQUES GENERALES

Présentations des statistiques - Tous les tableaux contiennent, sauf indication contraire, des données pour 1966 et 1967 disponibles jusqu'au 15 septembre 1968.

Les conversions en unités métriques ont été opérées, là où cela était nécessaire, en appliquant les coefficients qui se trouvent à l'Annexe (page 152). Des informations supplémentaires relatives à la conversion des chiffres sont données dans les notes techniques, page XXXVII.

Les chiffres sont susceptibles d'être révisés ultérieurement par les gouvernements et sont publiés alors comme "chiffres révisés". Pour les quantités inférieures à 10 la première décimale est donnée autant que possible. Toutefois pour certains tableaux, ce principe est suivi pour tous les chiffres. En règle générale les demi-unités ou demi-décimales sont arrondies à l'unité ou à la décimale paire la plus proche. Les valeurs sont exprimées en dollars des Etats-Unis, les monnaies nationales étant converties en dollars à l'aide des taux de change du tableau M 3. Quelques pays indiquent les chiffres des valeurs en dollars des Etats-Unis sans spécifier le taux de change utilisé.

Les tableaux sont aussi complets que possible, bien que, dans certains cas, les estimations du Secrétaire reposent sur de maigres informations. A l'intérieur de chaque continent, les pays sont rangés par ordre alphabétique, selon leurs noms anglais. Les totaux régionaux ne comprennent que les données des pays énumérés.

Les chiffres d'un certain nombre de tableaux demandent des explications et qualifications plus amples qu'il n'est possible de donner dans les notes de rappel. On trouvera par conséquent des renvois se référant aux Notes sur les pays, page XXXIV.

Contenu statistique - A la suite de la recommandation du Groupe de travail mixte FAO/ECE des Statistiques des forêts et des produits forestiers, les données concernant les planches de caisserie ne sont pas publiées séparément, mais incluses dans les statistiques du bois scié. Ce groupe de travail a aussi établi une nouvelle définition pour le "bois à pâte" (voir Annexe I), comme base des chiffres statistiques; nouvelle définition qui a en conséquence été utilisée pour les données du commerce.

Désignations géographiques - Les désignations utilisées et la présentation des données qui figurent dans la présente publication et sur les cartes géographiques, n'impliquent, de la part de l'Organisation des Nations Unies pour l'alimentation et l'agriculture, aucune prise de position quant au statut juridique ou constitutionnel de l'un quelconque des pays, territoires ou zones maritimes y figurant ni quant au tracé des frontières.

Dans la mesure du possible, les pays sont énumérés suivant leur situation "de facto" à la fin de 1966. Ci-après quelques notes explicatives sur les pays énumérés :

Afrique du Sud : tous les chiffres comprennent le Sud-Ouest africain ; les chiffres des importations comprennent le Lesotho, et le Swaziland ; les chiffres des exportations comprennent le Lesotho.

Espagne : le commerce avec la Guinée équatoriale est considéré comme commerce intérieur et de ce fait n'apparaît pas dans les statistiques.

Ethiopie : comprend Fédération d'Ethiopie et Erythrée.

Fédération des Antilles : les pays sont indiqués sous leur nom individuel

Guinée équatoriale : anciennement Guinée espagnole

Malaisie :

Malaisie occidentale

Sabah

Sarawak

Nigéria : y compris le Cameroun (adm. brit.)

Portugal : les chiffres de production excluent les Açores et Madère

Territoire français des Afars et des Issas : anciennement Côte française des Somalis.

SIGNES

CTCI = Classification type pour le commerce international, Révisée. a/

m³ (r) = Mètre cube de bois rond

m³ (s) = Mètre cube de bois scié

r. e. = Equivalent en bois rond

t. m. = Tonne métrique

- = Néant ou moins d'une demi-unité

.. = Non disponible

* = Chiffre non officiel

‡ = Voir notes sur les pays

() = Chiffre connu pour être incomplet

■ = Chiffre révisé

Le point (.) précède les chiffres décimaux

=000= = Chiffre reçu trop tard pour être inclus dans les totaux

a/ Etudes statistiques, Série M, no. 34, Nations Unies, New York, 1961.

I. NOTAS DE CARACTER GENERAL

Presentación de las estadísticas - Todos los cuadros contienen datos para 1966 y 1967, salvo indicación en contrario, disponibles en el 15 de septiembre de 1968

Las conversiones al sistema métrico decimal se han hecho, cuando ha sido necesario, aplicando los coeficientes que se encuentran en el Apéndice (página 155). Informes suplementarios relativos a la conversión de las cifras se dan en las notas técnicas, pág. XXXIX.

Las cifras están sujetas a ulteriores revisiones por parte de los gobiernos y están entonces publicadas como "cifras revisadas". Para las cifras inferiores de 10, la primera cifra decimal ha sido dada en medida de lo posible. No obstante, en ciertos cuadros se ha seguido este principio para todas las cifras. Como regla general, se puede decir que las media-unidad o las media-decimal están redondeadas a la unidad o a la decimal por más próxima. Los valores se expresan en dólares de los Estados Unidos utilizando para la conversión de las diversas monedas los tipos de cambio que figuran en el cuadro M 3. Algunos países expresan las cifras de valor en dólares EE.UU. sin especificar el tipo de cambio usado.

Los cuadros son lo más completos posible, aun cuando en ciertos casos las estimaciones de la Secretaría hayan necesariamente de basarse en informaciones incompletas. Los países de cada región aparecen en el orden del alfabeto inglés. Los totales regionales se refieren únicamente a los países indicados.

Las cifras de muchos cuadros requieren más explicación y pormenores de lo que es posible dar en las notas al pie de cada uno de ellos. Por tanto, en dichas notas se remite el lector a las Notas sobre los países, página XXXV.

Información estadística - Siguiendo la recomendación del Grupo Mixto FAO/CEE sobre Estadísticas Forestales, se interrumpirá la publicación separada de estadísticas sobre tablas para cajones, procediéndose a incluirlas en las estadísticas sobre madera aserrada. Este Grupo de Trabajo convino asimismo en una nueva definición para "madera para pulpa" (véase apéndice I) como base para un informe estadístico. Esta nueva definición ha sido utilizada para los datos del comercio.

Denominaciones geográficas - Las denominaciones empleadas en esta publicación, y en los mapas que contiene, y la forma en que aparecen los datos presentados, no implican por parte de la Organización de las Naciones Unidas para la Agricultura y la Alimentación, juicio alguno sobre la condición jurídica o constitucional de ninguno de los países, territorios o zonas marítimas citados, ni respecto de la delimitación de fronteras.

Tanto como sea posible, los países figuran según su situación "de facto" a finales de 1966. Siguen unas notas explicativas sobre los países registrados :

Africa del Sur : todas las cifras incluyen el Africa Sud-occidental, las cifras de las importaciones comprenden Lesotho y Swazilandia, las cifras de las exportaciones comprenden Lesotho.
España : se considera el comercio con la Guinea ecuatorial como comercio interior y entonces no aparece en las estadísticas
Etiopía : incluida Federación de Etiopía y Eritrea.
Federación de la Indias Occidentales : se indican los países bajo sus nombres individuales
Guinea ecuatorial : antiguamente Guinea española.
Malasia :
 Malasia occidental
 Sabah
 Sarawak
Nigeria : incluido el Camerún (Adm. brit.)
Portugal : las cifras de producción excluyen las Azores y Madera
Territorio francés de los Afares y los Issas : antiguamente Somalia francesa

SIMBOLOS

SITC (CUCI) = Clasificación uniforme para el comercio internacional, modificada, a/
m³ (r) = Metro cúbico de madera rolliza
m³ (s) = Metro cúbico de madera aserrada
r. e = Equivalente de madera rolliza
t. m. = Tonelada métrica
- = Nada o menos de la mitad de la unidad apropiada
.. = Non disponible
* = Cifra extraoficial
‡ = Véase notas sobre los países
() = Cifra que se sabe incompleta
◻ = Cifra revisada
 Las cifras decimales van precedidas de un punto (.)
=000= = Cifra recibida demasiado tarde para ser incluida en los totales

a/ Informes estadísticos, Serie M, No. 34, Naciones Unidas, Nueva York, 1961.

II. COUNTRY NOTES

CHINA (mainland)

No official statistics have been reported to FAO. Estimates are based on information derived from such sources as press releases from the New China News Agency, the "People's Daily" and reports from experts familiar with local conditions.

Since no information is available for unrecorded removals, removals estimates are considered to be conservative. Production of some forest products may also have been under-estimated.

BRAZIL

Paper and paperboard production data shown in table P6 so not include the production of certain non-reporting mills. For 1965 this unrecorded production is estimated at 130,000 metric tons.

FEDERAL REPUBLIC OF GERMANY

Removals are more accurately described as "utilization".

FINLAND

Removals are more accurately described as "utilization".

GERMANY, EASTERN

Excludes consumption for own use :

| | 1966 | 1967 |
|-----------------|------------------------|------------------------|
| Industrial wood | 52,000 m ³ | 48,000 m ³ |
| Fuelwood | 250,000 m ³ | 175,000 m ³ |

IRAN

Studies by FAO technicians indicate unrecorded poplar removals from trees outside the forests to be about 5,000,000 m³ annually.

MEXICO

Fuelwood figure includes an estimate of 1,000,000 m³ for unrecorded removals.

NEW ZEALAND

Estimated production of Blockboards of 5,000,000 square feet (7/8" basis).

SINGAPORE

Goods in transit to West Malaysia are recorded as imports from countries overseas and as exports to West Malaysia.
Goods in transit from West Malaysia are recorded as imports from West Malaysia and as exports to countries overseas.

UNITED KINGDOM

Production of "other fibre pulp" has been calculated from consumption of straw, rags and esparto, using the following converting factors : 0.55, 0.75 and 0.42 respectively.

II. NOTES SUR LES PAYS

ALLEMAGNE ORIENTALE

Non compris la consommation pour l'usage personnel des producteurs :

| | 1966 | 1967 |
|------------------------------|------------------------|------------------------|
| Bois d'oeuvre et d'industrie | 52.000 m ³ | 48.000 m ³ |
| Bois de chauffage | 250.000 m ³ | 175.000 m ³ |

BRESIL

Les chiffres de production de papiers et cartons indiqués au tableau P6 sont incomplets. La production non-enregistrée de certaines usines est estimée, pour 1965, à 130.000 tonnes métriques.

CHINE (continentale)

La FAO n'a pas reçu de statistiques officielles. Des estimations ont été faites à partir de renseignements obtenus de sources telles que des communiqués de presse de New China News Agency, le "People's Daily" et des rapports d'experts ayant une expérience des conditions locales.

Etant donné qu'aucun renseignements n'est disponible pour les quantités enlevées non enregistrées, les estimations de quantités enlevées peuvent être considérées comme modérées. De même, la production de certains produits forestiers peut aussi avoir été sous-estimée.

ETATS-UNIS

La production de "pâtes d'autres fibres" a été calculée en se basant sur la consommation de chiffons et autres matières à fibre et en employant les coefficients suivants : chiffons, 0,667 ; autres, 0,43.

FINLANDE

Le terme "quantités enlevées" serait plus exactement décrit avec "utilisation".

IRAN

D'après les indications d'une enquête effectuée par des techniciens de la FAO, le volume non enregistré de peuplier, enlevé hors forêt, aurait été d'environ 5.000.000 de m³ par an.

MEXIQUE

Les chiffres du bois de chauffage comprennent une estimation de 1.000.000 m³ pour les quantités enlevées non enregistrées.

NOUVELLE-ZELANDE

Production estimée de panneaux forts de 5.000.000 de pieds carrés (7/8" base).

REPUBLIQUE FEDERALE D'ALLEMAGNE

Le terme "quantités enlevées" serait plus exactement décrit avec "utilisation".

ROYAUME UNI

La production de "pâtes d'autres fibres" a été calculée à partir de la consommation de paille, chiffons et sparte en utilisant les coefficients suivants : 0,55, 0,75 et 0,42 respectivement.

SINGAPOUR

Les marchandises en transit vers la Malaisie occidentale sont enregistrées comme importations des pays d'outre-mer et comme exportations vers la Malaisie occidentale.

Les marchandises en transit de la Malaisie occidentale sont enregistrées comme importations de la Malaisie occidentale et comme exportations vers les pays d'outre-mer.

II. NOTAS SOBRE LOS PAISES

ALEMANIA ORIENTAL

Excluyendo el consumo para el uso personal de los productores :

| | 1966 | 1967 |
|----------------------|------------------------|------------------------|
| Maderas industriales | 52.000 m ³ | 48.000 m ³ |
| Leña | 250.000 m ³ | 175.000 m ³ |

ALEMANIA, REPUBLICA FEDERAL DE

Las "extracciones" se describen con más precisión como "utilización".

BRAZIL

En los datos relativos a la producción de papel y cartón, que figuran en el cuadro P6, no se incluye la producción no registrada de ciertas fábricas. Se calcula que, en 1965, esa producción no registrada ascendió a 130.000 toneladas métricas.

CHINA CONTINENTAL

No se han comunicado a la FAO estadísticas oficiales. Las estimaciones se basan en datos tomados de diversas fuentes, entre ellas los comunicados de la agencia de información Nueva China, artículos del "Diario del Pueblo" e informes de expertos conocedores de la situación del país.

Teniendo en cuenta que no se dispone de información sobre las extracciones no registradas, las estimaciones a este respecto se consideran como moderadas. Es posible que se haya subestimado también la producción de algunos productos forestales.

FINLANDIA

Las "extracciones" se describen con más precisión como "utilización".

IRAN

Informes de los técnicos de la FAO indican que las extracciones anuales de madera de alamo (árboles situados fuera del bosque) ascienden a unos 5.000.000 de m³.

MEXICO

Las cifras para la leña incluyen una estimación de 1.000.000 m³ por las extracciones no registradas.

NUEVA ZELANDIA

Producción estimada de tableros enlistonados de 5.000.000 de pies cuadrados (7/8" base)

REINO UNIDO

La producción de "pulpa de otras fibras" fue calculada tomando el consumo de paja, trapos y esparto y utilizando los coeficientes que siguen : 0,55, 0,75 y 0,42 respectivamente.

SINGAPUR

Las mercancías en tránsito hacia Malasia Occidental se registran como importaciones procedentes de países de ultramar y como exportaciones con destino a Malasia Occidental.

Las mercancías en tránsito procedentes de Malasia Occidental se registran como importaciones de Malasia Occidental y como exportaciones con destino a países de ultramar.

III. TECHNICAL NOTES

These notes draw attention to some of the difficulties encountered in compiling the Yearbook and to the shortcomings of certain of the statistics here presented. They are intended to help readers to interpret and use these statistics more effectively.

General remarks - In many of the tables, the reported figures, particularly for the last year, may be based on estimates subject to considerable later revision. The statistics of removals are perhaps revised more often and more drastically than data in other tables.

Individual categories of removals or of forest products are not always reported for both the years included in the Yearbook. In order to make regional totals comparable in such instances, the reported figures, whether for the later or the earlier year, were included in the regional totals for both years. It follows that the magnitude of change between the two years is under-estimated in the regional and world totals.

Any comparisons between countries should be made with reserve, since great differences between countries exist in the quality and the coverage of the statistics.

Conversion factors - Conversion factors are necessary when country data are provided in units not used in the Yearbook. They constitute a complex and important problem, owing to their direct impact on the accuracy of the published data converted from other measurement units. The revision of the system and of the conversion factors used previously to convert national data has been a major concern of the FAO/ECE Working Party on Forest and Forest Products Statistics. At its fourth session in Geneva in 1963, the Working Party agreed on a new method for converting national statistics into metric units, whereby conversions are as a rule made on the basis of national factors, while a set of standard general conversion factors is used only when national factors are not available.

Accordingly many European countries provided national conversion factors. This method of conversion, used for the data of European countries published in FAO/ECE publications, proved very successful. It was therefore decided to extend the application of this method to all statistical data published in the Yearbook, as national conversion factors of more countries become available.

These national conversion factors are to be published periodically, and revised as individual countries calculate additional or new national conversion factors.

The set of standard general conversion factors used when national conversion factors are not available had also to be re-examined. The list of standard general conversion factors published in the Appendix (page 150) is therefore to be considered as provisional.

The problem of conversion factors is many-sided. Three main groups can be distinguished :

1. The first group includes factors that merely convert corresponding units from one measurement system into another, i. e. , non-metric units into the corresponding metric units (e. g. , cubic feet into cubic metres). This conversion is a simple arithmetical operation. Some of the most currently used factors in this group are given in the Appendix, table 1, page 150.
2. The second group includes factors for converting units of measurement of different types into a standard type of measurement; e. g. weight into volume, surface area into volume. This type of conversion causes complex problems because of the heterogeneous nature of the various products listed as one group. The conversion of area measurements of sheet materials into volume depends on the average thickness of the product. The conversion of weight measurements of logs into volume depends on the average specific weight. Depending on the variety within the product by country and through time, special factors have to be applied. National conversion factors, regularly revised by the countries according to changing circumstances, will guarantee increasing accuracy and international comparability of the data published in the Yearbook.
3. The third group of factors gives the equivalents for products at different stages of production. These conversion factors are often used to obtain the volume of roundwood equivalent to a quantity of processed wood. The set of general roundwood equivalents (see page 152) is published merely for information and to allow comparisons on a very broad basis. Application of these factors to specific country data may be very misleading.

Comparability over time - The Yearbook contains figures only for a two-year period. As the statistics of various countries are improved, the bases for reporting are often revised and the current figures may no longer be comparable with the ostensibly similar figures of past years. Caution should therefore be exercised in assembling statistical series from successive issues of the Yearbook. For the long-term series of forest products statistics the reader is referred to the FAO publication, World Forest Products Statistics, A Ten-Year Summary, 1954-1963 (Rome, 1965).

Annual removals (Tables P1, P2, P3) - In most countries the reported figures are less than fellings by the volume of waste left in the woods and the losses sustained in logging and in transportation.

The problem of excluding bark enters when reported volumes of removals or of roundwood products are with bark and must be converted to the units used in the Yearbook tables, which, in all cases, are without bark. Many countries maintain and report their statistics with bark and suggest conversion factors which may vary between categories (e. g. , the per cent of volume in bark is often different for poles and for sawlogs, for coniferous species and for broadleaved, etc.); some other countries apply an over-all bark factor of 10%.

Some of the limitations in the data on removals are :

1. Wood reported as removed for one purpose may be used for another (e. g. , sawlogs may go into pulp, pitprops, or fuel). Reported removals categories therefore may not correspond to utilization categories. Furthermore, some of the volumes utilized for products such as pulp and fuelwood may be by-products of other removals categories - e. g. , from smaller sizes, logging and sawmill waste, etc.
2. Removals in some cases refer to green wood only thus ignoring, for example, fuelwood from dead trees.
3. The statistics of the removals of fuelwood remain very incomplete.

Trade statistics - Customs classifications, valuations and trading practices vary from country to country ; consequently, quantities or values reported as exports by one country will not necessarily appear in like amounts as imports in the records of the country to which they have been sent. As a result, discrepancies will often be noticed between the import and the export tables.

Differences will also show up between the tables on volume and on value of trade, because many countries do not report both volume and value for all categories of imports or exports. Furthermore, the SITC divisions 24, 25, 63 and 64 (tables T 15 and T 16) include more products in the value figures than the categories listed separately in the tables of imports and exports.

The tables showing value of trade do not necessarily include the same countries of therefore regional and world totals may differ.

The exchange rates used to convert national currencies to U. S. dollars in the value of trade tables were taken from the International Financial Statistics (International Monetary Fund, Washington).

Forest products other than wood - Statistics on forest products other than wood are difficult to collect in all countries, and the reported figures are therefore likely to fall short of total production, and perhaps also of total trade. For this reason it is not possible at the present time to estimate regional or world totals from the statistics given in table M 1.

Forest areas - Table M 2 gives the area of forest as published in the "World Forest Inventory 1963". The significance of these figures is different from the figures published previously which for several countries included the area of "unstocked forest land".

III. NOTES TECHNIQUES

Les remarques suivantes sont destinées à attirer l'attention sur quelques-unes des difficultés rencontrées dans la compilation de l'Annuaire et sur certaines imperfections des statistiques qui s'y trouvent. Ces notes doivent aider le lecteur à mieux interpréter et utiliser ces statistiques.

Remarques générales - Les chiffres indiqués, en particulier pour la dernière année, peuvent, dans un grand nombre de tableaux, être basés sur des estimations susceptibles d'être considérablement rectifiées par la suite. Ce sont les statistiques des quantités de bois enlevé qui subissent des rectifications peut-être plus fréquentes et plus rigoureuses que les chiffres d'autres tableaux.

Les rapports reçus n'ont pas toujours fait état des différentes catégories de bois enlevé ou des différents produits forestiers pour l'une et l'autre des années comprises dans l'Annuaire. Dans ces cas - en vue d'obtenir des totaux régionaux comparables - on a inclus les chiffres rapportés (pour un an) dans les totaux régionaux des deux années, qu'il s'agisse de la première ou de la deuxième, ce qui fait que, dans les totaux régionaux et mondiaux, la différence entre les deux années ne ressort pas dans toute son importance.

En faisant des comparaisons entre différents pays, il est recommandé de procéder avec réserve, étant donné que les statistiques varient largement d'un pays à l'autre quant à la qualité et quant à la méthode.

Coefficients de conversion - L'application de coefficients de conversion est nécessaire lorsque les données d'un pays sont exprimées dans les unités qui ne sont pas utilisées dans l'Annuaire. Elle soulève un problème grave et complexe en raison de l'effet direct qu'ont les coefficients sur l'exactitude des données publiées, qui sont calculées à partir d'autres unités de mesure. La révision du système et des coefficients précédemment employés pour la conversion des données de chaque pays est une question qui a beaucoup préoccupé le Groupe de travail mixte FAO/CEE des statistiques des forêts et produits forestiers. A sa quatrième session, tenue à Genève en 1963, celui-ci a adopté une nouvelle méthode pour convertir les statistiques nationales en unités métriques ; d'après celle-ci, les conversions sont opérées sur la base des coefficients nationaux. C'est seulement quand ces derniers ne sont pas disponibles qu'une série de coefficients généraux standardisés est appliquée.

De ce fait, de nombreux pays européens ont fourni des coefficients de conversion nationaux. Cette méthode de conversion, employée pour les données des pays européens qui paraissent dans les publications FAO/CEE, s'est révélée très satisfaisante. C'est pourquoi il a été décidé d'en étendre l'application à toutes les données statistiques publiées dans l'Annuaire, à mesure que les coefficients de conversion nationaux d'autres pays deviennent disponibles.

Ces coefficients de conversion nationaux seront publiés périodiquement, et révisés lorsque chaque pays calcule des coefficients supplémentaires ou nouveaux.

La série de coefficients de conversion généraux standardisés qui est appliquée à défaut de coefficients nationaux a dû également être réexaminée. Il convient donc de considérer comme provisoire la liste des coefficients de conversion généraux standardisés qui figure en appendice (page 152.)

Le problème des coefficients de conversion revêt de multiples aspects. On peut distinguer trois groupes principaux :

1. Le premier groupe comprend les coefficients qui servent uniquement à convertir dans un système de mesure des unités qui sont exprimées dans un autre système, c'est-à-dire des unités de divers systèmes en unités du système métrique (par exemple, pieds cube en mètres cubes). Il s'agit d'un simple calcul arithmétique. Certains des coefficients de ce groupe les plus couramment employés sont indiqués dans l'appendice, tableau I, page 152.

2. Le deuxième groupe comprend les coefficients appliqués pour la conversion d'unités de mesure de types différents en un type de mesure standard (par exemple, poids en volume, superficie en volume). Ce type de conversion soulève des problèmes complexes à cause du caractère hétérogène des divers produits inclus dans le même groupe. Par exemple, la conversion de mesures de surface de feuilles de placage en mesures de volume dépend de l'épaisseur moyenne du produit. La conversion du poids des grumes en volume dépend du poids spécifique moyen. Selon les caractéristiques variées propres à chaque produit et qui changent d'un pays à l'autre et suivant les époques, des coefficients spéciaux doivent être employés. Révisés régulièrement par les pays, en fonction des faits nouveaux, les coefficients de conversion nationaux garantiront une exactitude croissante et permettront d'établir des comparaisons entre les données de tous les pays qui sont publiées dans l'Annuaire.

3. Le troisième groupe donne les équivalents pour les produits à différents stades de production. Ces coefficients de conversion servent souvent à obtenir le volume de bois rond qui équivaut à une quantité de bois travaillé. La série des équivalents en bois rond (voir page 154) est publiée uniquement à des fins d'information et pour permettre des comparaisons très générales. L'application de ces coefficients aux données d'un pays en particulier peut donner des résultats tout à fait erronés.

Comparaison de périodes prolongées - L'Annuaire contient des chiffres s'étendant sur des périodes de deux ans seulement ; mais, à mesure que les statistiques de différents pays se perfectionnent, les bases des données sont souvent modifiées, et il se peut que les chiffres les plus récents ne puissent plus être comparés aux chiffres apparemment semblables des années passées. Il est par conséquent recommandé d'utiliser de prudence lorsqu'on tente de réunir des séries statistiques en se servant d'éditions successives de l'Annuaire. Pour des séries de statistiques forestières ayant trait à des périodes prolongées, le lecteur est renvoyé à la publication de la FAO. "Statistiques mondiales des produits forestiers", bilan de dix années, 1954-1963 (Rome, 1965).

Quantités enlevées annuellement (tableaux P 1, P 2, P 3) - Dans la majorité des pays, les chiffres indiqués sont inférieurs au volume des abattages, la différence représentant le volume des déchets laissés en forêt et des pertes subies dans les opérations de débardage et de transport.

Le problème de la déduction de l'écorce se présente dans les cas où les données fournies concernant les quantités enlevées ou la production de bois ronds s'entendent avec écorce ; il faut alors les réduire en unités de volume "écorcé", étant donné que c'est l'unité invariablement utilisée dans l'Annuaire. Les statistiques de nombre de pays sont maintenues, et leurs rapports sont libellés en volume avec écorce et proposent des coefficients de conversion variables selon les catégories (le pourcentage du volume avec écorce diffère par exemple entre poteaux et grumes de sciage, entre essences résineuses et feuillues, etc.) ; d'autres pays appliquent pour l'écorce un coefficient d'ensemble de 10%.

Les données concernant les quantités enlevées comportent certaines inexactitudes ; en voici quelques-unes :

1. Il se peut que le bois enlevé soit utilisé pour un emploi autre que celui auquel il était primitivement destiné (des grumes de sciage, par exemple, peuvent servir de bois à pâte, bois de mine ou bois de chauffage). Il peut en résulter des divergences entre la quantité des catégories enlevées et celle des catégories utilisées. En outre, certains volumes de bois utilisés pour des produits comme le bois à pâte ou le bois de chauffage peuvent être des sous-produits de bois enlevé sous d'autres catégories, par exemple comme bois de petites dimensions, comme déchets de débardage ou de sciage.

2. Dans certains cas, les quantités enlevées concernent le "bois vert" seulement, sans tenir compte, par exemple, du bois de chauffage d'arbres morts.

3. Les statistiques des quantités enlevées de bois de chauffage restent très incomplètes.

Statistiques commerciales - Etant donné que le classement douanier, l'évaluation et les usages commerciaux varient d'un pays à l'autre, les quantités ou les valeurs indiquées comme exportées d'un pays n'apparaîtront pas nécessairement en chiffres identiques comme importées dans les statistiques du pays destinataire. Des divergences seront par conséquent fréquemment relevées entre les tableaux des importations et les tableaux des exportations.

On remarquera d'autres différences encore entre les tableaux des échanges commerciaux en volume et en valeur, parce que nombre de pays n'indiquent ni le volume ni la valeur de toutes catégories d'importations et d'exportations. De surcroît, les divisions CTCI 24, 25, 63 et 64 (tableaux T 15 et T 16) comprennent plus de produits dans les chiffres donnés en valeur que les catégories séparément indiquées dans les tableaux des importations et des exportations.

Les tableaux indiquant la valeur du commerce n'incluent pas nécessairement les mêmes pays ; de ce fait les totaux régionaux et mondiaux peuvent être différents.

Dans les tableaux indiquant la valeur des échanges commerciaux, les taux de change utilisés pour la conversion des monnaies nationales en dollars des Etats-Unis ont été repris du "International Financial Statistics" (International Monetary Fund, Washington).

Produits forestiers autres que le bois - Il est difficile de recueillir, dans tous les pays, des statistiques sur des produits forestiers autres que le bois ; les chiffres indiqués restent par conséquent probablement en deçà du chiffre de la production totale et peut-être également du commerce. C'est pourquoi il n'est pas possible, actuellement, de tirer des estimations totales, régionales ou mondiales, des statistiques reproduites au tableau M 1.

Superficie des forêts - Le tableau M 2 donne la superficie des forêts telle que publiée dans "Inventaire forestier mondial 1963". Les chiffres ne sont pas comparables à ceux publiés précédemment étant donné que pour plusieurs pays ils comprenaient la superficie des "terres forestières non boisées".

III. NOTAS TECNICAS

En estas notas se apuntan algunas de las dificultades que se plantearon al compilar el Anuario, así como las deficiencias de algunas de las estadísticas aquí contenidas. Su objeto es ayudar a los lectores a interpretar y usar con mayor eficacia dichas estadísticas.

Observaciones generales - Las cifras de muchos de los cuadros (sobre todo las correspondientes al año pasado) se basan en estimaciones expuestas a considerables modificaciones posteriores. Más que las cifras de otros cuadros, son las estadísticas de las extracciones las que padecen más frecuentes y drásticas revisiones.

No siempre se dan informes sobre categorías particulares de extracciones o productos forestales para los dos años que abarca el Anuario. A fin de que los totales regionales resultaran comparables en esos casos, las cifras comunicadas para uno u otro año se incluyen en los totales regionales para ambos años. Como consecuencia, la magnitud del cambio entre los dos años se subestima en los totales regionales y mundiales.

No se deben hacer comparaciones entre países sin la debida cautela, dado que la calidad y el alcance de las estadísticas varían considerablemente de un país a otro.

Coefficientes de conversión - Los coeficientes de conversión son necesarios cuando los datos referentes al país se suministran en unidades no empleadas en el Anuario. Estos coeficientes constituyen un complejo e importante problema, debido a que influyen directamente en la exactitud de los datos publicados, que son resultado de la conversión de otras unidades de medida. La revisión del sistema y de los coeficientes de conversión utilizados anteriormente para convertir datos nacionales ha interesado considerablemente al Grupo Mixto de Trabajo FAO/CEE sobre Estadísticas Forestales. En la cuarta reunión de este Grupo en Ginebra, en 1963, se adoptó un nuevo método de conversión de estadísticas nacionales en unidades métricas, según el cual las conversiones se efectúan basándose, por lo general, en los coeficientes nacionales, mientras que se emplea una serie de coeficientes uniformes de conversión general únicamente cuando no se dispone de coeficientes nacionales.

En consecuencia, muchos países europeos suministraron coeficientes de conversión nacionales. Este método de conversión, utilizado con respecto a los datos de los países europeos que han aparecido en las publicaciones de la FAO/CEE, ha dado muy buen resultado. Por lo tanto, se decidió extender la aplicación de este método a todos los datos estadísticos publicados en el Anuario, según se va disponiendo de coeficientes de conversión nacionales de mayor número de países.

Estos coeficientes nacionales de conversión se habrán de publicar periódicamente y revisar según vaya calculando cada país nuevos coeficientes nacionales de conversión u otros adicionales.

Asimismo debían de revisarse los coeficientes uniformes de conversión general cuando no se dispusiera de coeficientes nacionales de conversión. En consecuencia, la lista de coeficientes de conversión generales y uniformes que aparece en el Anexo (pág. 155) se habrá de considerar como provisional.

El problema de los coeficientes de conversión presenta muchas facetas. Se pueden distinguir tres grupos principales:

1. En el primer grupo figuran coeficientes que convierten simplemente unidades correspondientes desde un sistema de medida a otro, o sea, unidades no métricas en las correspondientes unidades métricas (por ejemplo, pies cúbicos en metros cúbicos). Esta conversión se limita a una simple operación aritmética. En el Apéndice, cuadro 1, pág. 155, se dan algunos de los coeficientes de este grupo de uso más corriente.

2. El segundo grupo comprende coeficientes para convertir unidades de medida de diferentes tipos en un tipo uniforme de medida, por ejemplo, peso en volumen, área superficial en volumen. Este tipo de conversión origina problemas complejos, a causa del carácter heterogéneo de los diversos productos incluidos en un grupo. La conversión de medidas de superficie de materiales chapeados en medidas de volumen depende del espesor medio del material. La conversión de medidas de peso de troncos en volumen depende del peso medio específico. Se habrán de aplicar coeficientes especiales según la variedad dentro de cada producto y con arreglo al país y al tiempo. Los coeficientes de conversión nacionales, revisados periódicamente por los países para adaptarlos a las circunstancias variables, garantizarán una exactitud cada vez mayor y una comparabilidad internacional de los datos públicos en el Anuario.

3. En el tercer grupo de coeficientes se dan los equivalentes para los productos en diferentes fases de la producción. Estos coeficientes se utilizan a menudo para obtener el volumen de madera rolliza equivalente a una cantidad de madera manufacturada. La serie de equivalentes generales de madera rolliza (véase pág. 157) se publica simplemente con carácter informativo y para que puedan efectuarse comparaciones con arreglo a una base amplia. La aplicación de estos coeficientes a datos específicos de un país podría inducir en error.

Comparabilidad secular - El Anuario sólo da cifras para un bienio. Como las estadísticas de varios países van mejorando continuamente, las bases de los datos proporcionados sufren frecuentes revisiones, razón por la cual las cifras actuales pueden no ser ya comparables con otras cifras en apariencia analogas de años anteriores. Por lo tanto, hay que actuar con prudencia al formar series estadísticas con datos tomados de números sucesivos del Anuario. Para las series a largo plazo de estadísticas de productos forestales se remite al lector a la publicación de la FAO titulada "Estadísticas mundiales de productos forestales" - Resumen decenal 1954-1963 (Rome 1965).

Extracciones anuales (cuadros P 1, P 2, P 3) - Casi todos los países resultan inferiores a las de los apeos dado el volumen de desperdicio que queda en el bosque y las pérdidas que ocurren durante las operaciones de corta y transporte.

El problema de excluir la corteza se plantea cuando los volúmenes comunicados de las extracciones o los productos en rollo son con corteza, y se deben convertir a las unidades que se emplean en los cuadros del Anuario que, en todos los casos, son sin corteza. Muchos países llevan y comunican sus estadísticas con corteza y sugieren factores de conversión que pueden variar según la categoría (por ejemplo, el porcentaje de volumen en corteza suele ser distinto para los postes y para las trozas de aserrar, para las especies coníferas o para las frondosas, etc.); algunos otros países aplican un factor universal de corteza del 10%.

Los datos sobre las extracciones tienen ciertas limitaciones, como por ejemplo las siguientes :

1. La madera que, en la comunicación, figura destinada a un determinado uso puede ser empleada, para otro (por ejemplo, trozas para aserrar se pueden convertir en pulpa, o utilizar como puntales de mina, o leña). Por consiguiente, las categorías en que en los informes se dividen las extracciones pueden a veces no corresponder a las categorías de utilización. Más aún, algunos de los volúmenes utilizados para pulpa y leña pueden ser subproductos de otras categorías de extracciones, como por ejemplo, madera de pequeñas dimensiones, residuos de corta y de aserrio, etc.

2. En algunos casos, las extracciones se refieren únicamente a la madera verde, ignorando, por ejemplo, las leñas muertas.

3. Las estadísticas de extracciones de leña son incompletas.

Estadísticas comerciales - Las clasificaciones aduaneras y las evaluaciones y prácticas de comercio varían de un país a otro, y, por lo tanto, las cantidades o valores comunicados como exportaciones por un país no se reflejan necesariamente en cantidades análogas como importaciones en los registros del país a donde se han expedido. O sea, que con frecuencia se advertirán discrepancias entre los cuadros de importación y exportación.

También se observarán diferencias entre los cuadros sobre el volumen y el valor del comercio, porque muchos países no comunican simultáneamente el volumen y el valor de todas las categorías de importaciones o exportaciones. Por otra parte, las divisiones de la CUCI 24, 25, 63 y 64 (cuadros T 15 y T 16) incluyen entre las cifras de valor un número de productos mayor al de categorías enumeradas por separado en los cuadros de importaciones y exportaciones.

Los cuadros sobre el valor del comercio no incluyen necesariamente los mismos países ; por eso los totales regionales y mundiales pueden ser diferentes.

Los tipos de cambio que se emplearon para convertir las monedas nacionales en dolares de los Estados Unidos en los cuadros sobre el valor del comercio, se tomaron del "International Financial Statistics" (International Monetary Fund, Washington).

Productos forestales diferentes de la madera - Las estadísticas sobre los productos forestales diferentes de la madera son difíciles de reunir en todos los países y, por tanto, las cifras comunicadas probablemente sean inferiores a la producción total y quizás también al comercio total. Por esta razón no es posible estimar actualmente los totales regionales o mundiales en base a las estadísticas del cuadro M 1.

Superficie de los montes - El cuadro M 2 da la superficie de los montes tal como ha sido publicada en el "Inventario forestal mundial 1963". Las cifras no son comparables a las que han sido publicadas precedentemente, ya que comprendían para varios países la superficie de las "tierras forestales no arboladas".

NOTES TO TABLES T 1 TO T 16.

- a For "Wood and residues" and " Chips and particles", see table below
 b Value of pulpwood included in poles, piling and posts.
 c Includes value of pulpwood.
 d Includes flaxboard, see table below.
 e Includes semi-chemical pulp.
 f Includes other fibre pulp, see table below.
 g Included in chemical wood pulp
 i Includes "Wood residues"
 j Twelve months ending 30 June of year stated.
 l Included in pulpwood.
 m Sum of values given in tables T 7, 8 and 9, and T 10, 11 and 12.
 n Year 1965.
 o Importers figures, incomplete.
 p Includes paper waste, and old paper.
 q Twelve months ending 30 September of year stated
 r Includes broadleaved sawnwood.
 s Included in broadleaved logs.
 t Exporters figures, incomplete
 u Year 1964.
 v Twelve months beginning 1st April of year stated.
 z Included in coniferous sawnwood.
 aa Includes wood for charcoal.

NOTES RELATIVES AUX TABLEAUX T 1 A T 16.

- a Voir "Résidus de bois" et "Plaquettes et particules" au tableau ci-dessous.
 b La valeur du bois à pâte est comprise dans les poteaux, pilotis et pieux.
 c Y compris la valeur du bois à pâte.
 d Y compris les panneaux d'anas de lin, voir tableau ci-dessous.
 e Y compris la pâte mi-chimique.
 f Y compris les pâtes d'autres fibres, voir tableau ci-dessous.
 g Compris dans la pâte de bois chimique.
 i Y compris les "Résidus de bois".
 j Douze mois finissant le 30 juin de l'année indiquée.
 l Compris dans le bois à pâte.
 m Total des valeurs données dans les tableaux T 7, 8 et 9, et T 10, 11 et 12.
 n Année 1965.
 o Chiffres des importateurs, incomplets.
 p Y compris les déchets de papier et les vieux papiers.
 q Douze mois finissant le 30 septembre de l'année indiquée.
 r Y compris les sciages de feuillus.
 s Compris dans les grumes de feuillus.
 t Chiffres des exportateurs, incomplets.
 u Année 1964.
 v Douze mois commençant le 1er avril de l'année indiquée.
 z Compris dans les sciages de résineux.
 aa Y compris le bois de carbonisation.

NOTE : this table is extracted from
 "World Forest Inventory, 1963" (FAO, May 1966).

Regionals totals include non-listed countries.

- a Includes unstocked forest land.
- b Excludes Azores and Madeira.
- c Includes water area.
- d Includes unstocked area in non-commercial forest land.

NOTE : ce tableau est tiré de "Inventaire
 forestier mondial 1963" (FAO, mai 1966).

Les totaux régionaux comprennent les pays
 non mentionnés.

- a Y compris les terres forestières non boisées.
- b Non compris les Açores et Madère.
- c Y compris la superficie occupée par les eaux.
- d Y compris les superficies non boisées des terres forestières non commerciales.

| I. DEFINICIÓN DE LOS TÉRMINOS | 145 |
| II. COEFICIENTES DE CONVERSIÓN | 155 |

I. DEFINITION OF TERMS

GENERAL TERMS

| | |
|--|--|
| REMOVALS | Quantities removed during the calendar year or during the forestry year, from forests and from trees outside the forest, but excluding losses and unutilized waste in logging and roundwood transportation. Includes recorded volumes, as well as estimated unrecorded volumes, unless otherwise indicated. Figures are given in solid volume of roundwood without bark. |
| CONIFEROUS (softwoods) | All woods derived from trees classified botanically as "Gymnospermae" - e.g. fir (<i>Abies</i>), parana pine (<i>Araucaria</i>), deodar (<i>Cedrus</i>), ginkgo (<i>Ginkgo</i>), larch (<i>Larix</i>), spruce (<i>Picea</i>), pine, chir, kail (<i>Pinus</i>), etc. |
| BROADLEAVED (non-coniferous, hardwoods) | All woods derived from trees classified botanically as "Angiospermae" - e.g. maple (<i>Acer</i>), alder (<i>Alnus</i>), ebony (<i>Diospyros</i>), beech (<i>Fagus</i>), lignum vitae (<i>Guiaicum</i>), poplar (<i>Populus</i>), oak (<i>Quercus</i>), sal (<i>Shorea</i>), teak (<i>Tectona</i>), casuarina (<i>Casuarina</i>), etc. |
| PRODUCTION | The total production of primary products is reported even though a portion may immediately be consumed in the production of another commodity (e.g., wood pulp, which may immediately be converted into paper as part of a continuous process). |
| IMPORTS | Products for domestic consumption or processing. "In transit" shipments are excluded; in certain instances imports for re-export may be included. |
| EXPORTS | All quantities of domestic origin or manufacture shipped out of the country. For reasons indicated above under Imports, re-exports are included. "In transit" shipments are excluded. |

PRODUCTS

(S.I.T.C.)

| | |
|---|--|
| FIBREBOARD (641.6) | A sheet material manufactured from fibres of wood or other ligno-cellulosic materials, with the primary bond deriving from the arrangement of the fibres and their inherent adhesive properties. Bonding agents or other materials may be added during manufacture to increase strength or resistance to moisture, fire, insects or decay, or to improve some other property of the product. (Similar products made from pieces of wood or pieces of other ligno-cellulosic material or from wood flour with added binders are excluded, as are boards of gypsum or other mineral material.) |
| Compressed Fibreboard | Fibreboard with a density over 0.40 g./cm ³ (25 lb./cu.ft.). Includes semi-hardboard, hardboard, and super-hardboard as variously defined. |
| Non-compressed fibreboard (insulation boards) | Fibreboard with a density of 0.40 g./cm ³ (25 lb./cu.ft.) or less. |
| FUELWOOD (241.1) | Wood to be used as fuel for purposes of cooking, heating, production of power, etc. Includes wood for charcoal pit kilns and portable ovens and may include wood from trunks and branches. The trade figures include also sawdust. |

(S. I. T. C.)

| | |
|-------------------------------|--|
| INDUSTRIAL WOOD | Includes the following roundwood: sawlogs, veneer logs, logs for sleepers, pulpwood, pitprops, other industrial wood. |
| LUMBER (243.2/3) | (See "Sawnwood".) |
| NEWSPRINT (641.1) | Bleached, unsized or slack-sized printing paper, without coating, of the type usually used for newspaper; weight from 45 to 60 gr. per m ² , usually with at least 70% of the weight of fibrous material derived from mechanical pulp. |
| OTHER FIBRE PULP (251.5) | Pulp other than wood pulp, derived from fibrous materials such as straw, bagasse, cotton, flax, bamboo, esparto, and other grasses, used for the manufacture of paper, paperboard and fibreboard. |
| OTHER INDUSTRIAL WOOD | Roundwood used for tanning, distillation, match blocks, gazogenes, poles, piling, posts, etc. |
| OTHER PAPER (641. part) | All paper other than newsprint or printing and writing paper, in rolls or in sheets — e.g., cigarette paper, filter paper, poster paper, tissue paper, kraft paper, wallpaper, corrugated, creped, embossed or perforated paper, etc. |
| PAPERBOARD (641. part) | The term usually designates all grades of fibrous material which are 0.3 mm. (0.012 inch) or more in thickness made on a paperboard machine. It also embraces certain thinner products which in manufacture and use are classed as paperboard rather than paper. Some examples of paperboard are: pulp boards, felt boards, duplex, triplex and multiplex boards, parchment paperboard, composite paperboard, corrugated paperboard, embossed paperboard, coated or impregnated paperboard, etc. |
| PARTICLE BOARD (631.4 (2)) | A sheet material manufactured from small pieces of wood or other ligno-cellulosic materials (e.g., chips, flakes, splinters, strands, shreds, shives, etc.) agglomerated by use of an organic binder together with one or more of the following agents: heat, pressure, humidity, a catalyst, etc. (Wood wool or other particle boards, with inorganic binders, are excluded.) |
| PILING (242.9, part) | Long straight pieces cut from trunks of trees and usually destined to be driven into the ground under impact. They are chiefly used in construction of harbour works and as supports for bridges and buildings. |
| PITPROPS (242.4) | All round timber used in mining operations. Sawn pitwood is included under "Sawnwood". |
| PLYWOOD (631.2) | Covers <i>veneered wood</i> , <i>plywood</i> and <i>blockboard</i> , <i>laminboard</i> and <i>battenboard</i> as well as <i>cellular wood panels</i> . <i>Veneered wood</i> is wood in sheets or panels in which a thin veneer of wood is affixed to a base, usually of inferior wood, by glueing under pressure. <i>Plywood</i> consists of three or more sheets of wood glued or pressed one on the other and generally disposed so that the grains of successive layers are at an angle. <i>Blockboard</i> , <i>laminboard</i> and <i>battenboard</i> consist of a thick core composed of blocks, laths or battens of wood glued together and surfaced with the outer plies, the grain of which is perpendicular to that of the core. <i>Cellular wood panels</i> (which may or may not be faced with base metal) are somewhat similar in appearance to blockboards and battenboards but the battens or laths forming the core are spaced one from the other, either parallel or in lattice form. These panels may consist of facing sheets (of solid wood, plywood or other panels), separated by an internal frame at the edges only and the interstices may be packed with sound-insulating or heat-resisting materials. |

(S. I. T. C.)

| | |
|---|---|
| POLES (242.9, part) | Straight pieces taken from the trunks of trees and more than 3 metres in length. Poles are chiefly used to support telephone, telegraph, and electrical transmission lines and for scaffolding. In some areas, poles of varying size may be used in the construction of dwellings. |
| POSTS (242.9, part) | Round, hewn, squared, or split wood, usually less than 3 metres in length, used for fencing. |
| PRINTING AND WRITING PAPER (641.2) | Excludes newsprint and manufactures such as stationery, books, etc. |
| PULPWOOD | Wood for pulping, by mechanical means (e.g. defibration), by chemical means or combined mechanical and chemical means, and for the manufacture of fibreboard and particle board. Pulpwood may be barked or unbarked and may be in the form of round or split wood, or of wood residues from logging and industry. It may also be in the form of wood chips or wood particles. |
| ROUNDWOOD | All wood prior to primary processing but including split fuelwood and split pulpwood. Examples: fuelwood, sawlogs, veneer logs, logs for sleepers, pulpwood, pitprops, poles, piling and posts. |
| SAWLOGS, VENEER LOGS, AND LOGS FOR SLEEPERS (242.2/3) | Solid volume (excluding bark) of logs destined for sawing and for the manufacture of sleepers and of veneers. Logs transformed into hewn wood (excepting hewn railway sleepers) and roundwood for the manufacture of staves (cooperage) and shingles are also included. |
| SAWNWOOD (243.2/3) | Includes wood simply sawn lengthwise (for example, planks, beams, joists, boards, rafters, scantlings, laths, etc.); wood planed, tongued or grooved; wood chamfered, rabbeted, V-joint, beaded, etc. Boxboards are included but sawn railways sleepers are excluded. Production includes wood sawn from both home-grown and imported roundwood. |
| SLEEPERS (railway cross-ties) (241.1) | Pieces of wood of more or less rectangular section laid transversely on the railway road-bed to support the rails. Sleepers may be sawn or hewn. |
| VENEER SHEETS (631.1) | Thin sheets of wood of uniform thickness, rotary cut, sliced, or sawn, for use in plywood, laminated construction, furniture, veneer containers, etc. |
| VENEER LOGS | (See "Sawlogs, veneer logs, and logs for sleepers"). |
| WOOD FOR CHARCOAL | The solid volume of wood used to produce charcoal, included in fuelwood. |
| WOOD PULP (251.2/6/7/8/9) | Fibrous material prepared from wood by mechanical and/or chemical processes for further manufacture into paper, paperboard, fibreboard, or other cellulose products. Data are in air-dry weights and include pulp produced as an intermediate product in integrated paper mills. |
| MECHANICAL WOOD PULP (251.2) | Pulp prepared from wood by mechanical disintegration. Includes exploded and defibrated pulp and mechanical screenings. |
| SULPHITE WOOD PULP (251.8) | Wood pulp prepared by an acid pulping process. The liquor used in the sulphite process is an aqueous solution of sulphurous acid in which lime or some other base has been dissolved. It may be bleached or unbleached. Includes chemical sulphite screenings. |
| SULPHATE AND SODA WOOD PULP | Wood pulp prepared by an alkaline cooking process in which the liquor used for digestion contains a mixture of sodium hydroxide and sodium sulphide (sulphate method); and sodium hydroxide alone (soda method). Includes chemical sulphate screenings. |

(S.I.T.C.)

DISSOLVING GRADES
(251.6)

Special grades of bleached chemical pulp (sulphite and sulphate) of high alpha-cellulose content suitable for conversion into rayon, cellophane, lacquers and for other specialized non-papermaking uses.

SEMI-CHEMICAL WOOD PULP
(251.9)

Wood pulps in which the fibres are separated without material damage by a sequence of chemical and mechanical actions and where the conditions of the separate treatment are not sufficiently severe in themselves to bring about a ready separation of the fibres (includes chemi-groundwood).

I. DÉFINITION DES TERMES

TERMES GENERAUX

QUANTITES ENLEVEES

Quantités enlevées des forêts pendant l'année civile ou l'année forestière, y compris le bois provenant d'arbres poussant hors forêts, mais à l'exclusion des pertes et des déchets inutilisés lors des opérations d'abattage et de débardage et de transports des bois ronds. Dans ces quantités, sont compris, sauf indication contraire, le volume enregistré et le volume non enregistré (estimé). Les chiffres donnés correspondent au volume solide du bois rond, sans écorce.

CONIFERES

Tous les bois provenant d'arbres classés en botanique sous le nom de gymnospermes, tels que sapin (*Abies*), pin du Parana (*Araucaria*), doadar (*Cedrus*), ginkgo (*Ginkgo*), mélèze (*Larix*), épicéa (*Picea*), pin, chir, kail (*Pinus*), etc.

FEUILLUS

Tous les bois provenant d'arbres classés en botanique sous le nom d'angiospermes, tels que érable (*Acer*), aune (*Alnus*), ébène (*Diospyros*), hêtre (*Fagus*), gaiac (*Guaiacum*), peuplier (*Populus*), chêne (*Quercus*), sal (*Shorea*), teck (*Tectona*), casuarina (*Casuarina*), etc.

PRODUCTION

La production totale des produits de base est indiquée, même si une partie en est immédiatement absorbée par la fabrication d'un autre produit (la pâte de bois, par exemple, qui est parfois, au cours d'une série de transformations, convertie immédiatement en papier).

IMPORTATIONS

Produits importés pour être consommés ou transformés dans le pays. Non compris les quantités "en transit". Dans certains cas, les quantités destinées à être réexportées sont comprises dans les importations.

EXPORTATIONS

Les exportations comprennent toutes les quantités d'origine ou de fabrication indigènes expédiées hors du pays. Pour les raisons indiquées ci-dessus, sous la rubrique "Importations", les réexportations sont comprises, mais non les expéditions "en transit".

PRODUITS

(C.T.C.I.)

| | |
|-------------------------------------|--|
| AUTRES BOIS D'OEUVRE ET D'INDUSTRIE | Bois pour extraits tannants, bois pour distillation, pour allumettes, bois pour gazogènes, pour poteaux, pieux, pilotis, etc. |
| AUTRES PAPIERS (641, partiel) | Tous les papiers, à l'exception du papier journal et autres papiers destinés à l'impression et à l'écriture, en feuilles et en rouleaux; par exemple papier à cigarettes, papier filtre, papier affiche, papier mousseline, papier kraft, papier à tapisser, papier ondulé, papier crêpé, papier gaufré, papier perforé, etc. |
| BOIS A PATE (242.1) | (Voir "Bois de trituration"). |
| BOIS DE CHAUFFAGE (241.1) | Bois destiné à être brûlé pour la cuisine, le chauffage, la production d'énergie, etc. Comprend le bois carbonisé dans des meules et dans des fours mobiles et peut comprendre du bois provenant des souches et des branches. La sciure de bois est également comprise dans les statistiques commerciales. |
| BOIS DE MINE (242.4) | Tout bois rond utilisé dans l'exploitation des mines. Le bois de mine scié est compris dans la rubrique "sciages". |
| BOIS DE TRITURATION | Bois pour la fabrication des pâtes de cellulose, par des procédés mécaniques, (p.ex. défibrage), chimiques ou mi-chimiques, et pour la fabrication des panneaux de fibres et des panneaux de particules. Les bois de trituration peuvent être écorcés ou non. Ils se présentent sous forme de rondins ou de quartiers, de résidus de l'exploitation forestière et de l'industrie. La même dénomination s'applique au bois réduit en plaquettes ou en particules. |
| BOIS D'OEUVRE ET D'INDUSTRIE | Comprennent les bois ronds suivants: grumes de sciage, de placage et pour traverses, bois à pâte, bois de mine, autres bois d'œuvre et d'industrie. |
| BOIS POUR CARBONISATION | Volume solide du bois utilisé dans la fabrication du charbon de bois. |
| BOIS RONDS | Tous les bois non encore travaillés. Cette catégorie comprend néanmoins le bois à pâte et le bois de chauffage fendu. Exemples: bois de chauffage, grumes de sciage, de placage et pour traverses, bois à pâte, bois de mine, poteaux, pilotis et pieux. |
| CARTONS (641, partiel) | Ce terme désigne d'ordinaire toutes les catégories de matières fibreuses d'une épaisseur de 0,3 mm ou plus, fabriquées à la machine à carton. Il s'applique également aux produits plus minces qui sont classés, au point de vue de la fabrication et de l'utilisation, parmi les cartons plutôt que parmi les papiers. On peut citer: les cartons en pâte de bois, les cartons feutres, les cartons duplex, triplex et multiplex, les cartons parcheminés, les cartons ondulés, les cartons gaufrés, les cartons estampés, les cartons vernis ou imprégnés, etc. |
| CONTRE-PLAQUES (631.2) | Les contre-plaqués comprennent le <i>bois plaqué</i> , le <i>contre-plaqué</i> , les <i>panneaux forts</i> , <i>panneaux à blocs</i> , <i>panneaux à lamelles</i> et les <i>panneaux forts</i> dits "squelettes". Le <i>bois plaqué</i> est fait d'une feuille ou d'un panneau de bois de qualité inférieure, sur quoi est collée sous pression une mince feuille d'un bois de meilleur aspect. Le <i>contre-plaqué</i> consiste en trois feuilles de bois <i>au moins</i> , collées ou assemblées sous pression et d'ordinaire à fil croisé. Les <i>panneaux forts</i> à blocs et à lamelles sont faits d'une âme épaisse de blocs, de lattes ou de baguettes collées entre deux feuilles de placage, dont le fil croise celui des éléments de l'âme. Les <i>panneaux forts</i> dits "squelettes" (dont une face peut être d'un métal commun) ressemblent assez aux panneaux à blocs, mais ils sont faits d'un lattis de baguettes ou de lattes, parallèles ou croisées, entre deux feuilles; ils sont également appelés "panneaux à vides d'air"; certains sont faits de deux feuilles (de bois, de contre plaqué, etc.) séparées par un cadre, le creux étant rempli d'un matériau isolant. |

(C. T. C. I.)

| | |
|--|---|
| GRUMES DE PLACAGE | (Voir "Grumes de sciage, de placage et pour traverses".) |
| GRUMES DE SCIAGE, DE PLACAGE ET POUR TRAVERSES (242.2/3) | Volume solide (écorce non comprise) des grumes destinées au sciage et à la fabrication de traverses et de placages. Sont également inclus les grumes équarries à la hache (excepté les traverses équarries à la hache) et les bois ronds pour douves (tonnellerie et bardeaux). |
| PANNEAUX DE FIBRE (641.6) | Matériau en feuilles, fabriqué en partie de fibre de bois ou d'autres substances ligno-cellulosiques, l'agglomération étant assurée principalement par la disposition des fibres et par leur cohésion naturelle. Des liants ou autres produits d'addition peuvent y être incorporés en cours de fabrication pour accroître la solidité, la résistance à l'humidité, au feu, aux insectes, à la pourriture ou pour améliorer quelque autre propriété. (N'entrent dans cette catégorie ni les produits analogues faits de morceaux de bois, de morceaux de matières fibro-cellulosiques ou de farine de bois agglomérés avec des liants, ni les panneaux à base de gypse ou d'autres substances minérales.) |
| Panneaux de fibre comprimés | Panneaux de fibre d'une densité supérieure à 0,40 g/cm ³ . Comprend les diverses sortes de panneaux semi-durs, durs et extra-durs. |
| Panneaux de fibre non comprimés (panneaux isolants) | Panneaux de fibre d'une densité égale ou inférieure à 0,40 g/cm ³ . |
| PANNEAUX DE PARTICULES (631.4 (2)) | Matériau en feuilles, fabriqué en partie de petits fragments de bois ou d'autres substances ligno-cellulosiques (copeaux, flocons, éclats, fils, brins, etc.) agglomérés sous l'action d'un liant organique, ainsi que d'un ou plusieurs des agents suivants: chaleur, pression, humidité, catalyseur, etc. (A l'exclusion de la laine de bois et autres panneaux de particules agglomérés au moyen de liants inorganiques.) |
| PAPIERS DESTINES A L'IMPRES- SION ET A L'ECRITURE (641.2) | N'entrent pas dans cette rubrique le papier journal et les produits manufacturés tels que fournitures de bureau, livres, etc. |
| PAPIER JOURNAL (641.1) | Papier d'impression, blanchi, non collé ou peu encollé, non couché, du type d'ordinaire utilisé pour les journaux; poids de 45 à 60 g au m ² ; contenant généralement au moins 70% en poids de matière fibreuse tirée de la pâte mécanique. |
| PATES D'AUTRES FIBRES (251.05) | Pâtes, autres que la pâte de bois, provenant de matières fibreuses telles que la paille, la bagasse, le coton, le lin, le bambou, l'alfa et autres plantes utilisées dans la fabrication du papier, du carton et des panneaux de fibre. |
| PATE DE BOIS (251.2/6/7/8/9) | Matériaux fibreux extraits du bois, mécaniquement ou chimiquement, et destinés à être transformés en papier, carton, panneaux de fibre ou autres produits celluloses. Les chiffres donnés se rapportent au poids sec à l'air et comprennent la pâte obtenue comme produit intermédiaire dans les papeteries intégrées. |
| PATE DE BOIS MECANIQUE (251.2) | Pâte préparée en soumettant le bois à la désintégration mécanique. Comprend le bois éclaté et défilé ainsi que les refus du traitement mécanique. |
| PATE DE BOIS AU BISULFITE (251.8) | Pâte de bois préparée au moyen d'un procédé acide. Le liquide utilisé dans le procédé au bisulfite est une solution aqueuse d'acide sulfureux dans laquelle on a préalablement dissous de la chaux ou une autre base. La pâte peut être blanchie ou non. Entrent dans cette catégorie les refus du traitement chimique au bisulfite. |
| PATE A DISSOUDRE (251.6) | Qualité spéciale de pâte de bois blanchie (bisulfite et sulfate), d'une forte teneur en alpha-cellulose, aisément convertie en rayonne, cellophane, matières plastiques, laque, et se prêtant à des utilisations spéciales autres que la fabrication du papier. |

(C. T. C. I.)

| | |
|---|---|
| PÂTES DE BOIS MI-CHIMIQUES (251.9) | Pâtes de bois dans lesquelles les fibres sont séparées sans être endommagées par une série d'opérations chimiques et mécaniques et où chaque traitement s'effectue dans des conditions qui ne sont pas suffisamment efficaces en elles-mêmes pour provoquer la séparation spontanée des fibres (y compris les pâtes mécano-chimiques.) |
| PÂTE DE BOIS AU SULFATE ET À LA SOUDE (251.7) | Pâte de bois préparée par cuisson en milieu alcalin dans laquelle le liquide utilisé pour la digestion renferme un mélange d'hydroxyde et de sulfite de soude (procédé au sulfate); ou d'hydroxyde de soude seul (procédé à la soude). Entrent dans cette catégorie les refus du traitement chimique au sulfate. |
| PIEUX (242.9, partiel) | Bois ronds, équarris ou refendus, ayant généralement moins de 3 mètres de long et utilisés pour les clôtures. |
| PILOTIS (242.9, partiel) | Longues pièces droites, tirées du tronc des arbres et généralement destinées à être enfoncées dans le sol. Les pilotis sont utilisés principalement dans la construction des ouvrages portuaires et des échafaudages servant à la construction de ponts et d'immeubles. |
| PLACAGES, FEUILLES DE (631.1) | Mincees feuilles de bois d'épaisseur uniforme, déroulées, tranchées ou sciées pour être utilisées dans la fabrication du contre-plaqué, des bois laminés, de meubles et des emballages, etc. |
| POTEAUX (242.9, partiel) | Pièces droites tirées du tronc des arbres et ayant plus de 3 mètres de long. Les poteaux sont utilisés principalement pour supporter les lignes de transmission téléphonique, télégraphique ou électrique, ainsi que pour les échafaudages. Dans certaines régions, des poteaux de dimensions variées peuvent être utilisés pour la fabrication de maisons d'habitation. |
| SCIAGES (243.2/3) | Comprend le bois simplement scié dans le sens de la longueur (par exemple: madriers, poutres, solives, planches, chevrons, voliges, lattes, etc.); le bois raboté, le bois à tenons ou mortaises, le bois chanfreiné, à feuillures, à joints en V, à rebords, etc. Y compris les planches de caisserie mais non compris les traverses de chemin de fer sciées. La production comprend le bois rond scié, indigène et importé. |
| TRAVERSES DE CHEMIN DE FER (243.3) | Pièces de bois, de coupe plus ou moins rectangulaire, placées transversalement sur la voie et sur lesquelles sont posés les rails. Les traverses peuvent être sciées ou équarrées à la hache. |

I. DEFINICIÓN DE LOS TÉRMINOS

TERMINOS GENERALES

EXTRACCIONES

Cantidades extraídas durante el año civil o el año forestal, de los bosques y de los árboles situados fuera del bosque, pero excluyendo las pérdidas y los residuos no aprovechados de corta y transporte de los rollos. Incluye los volúmenes registrados, así como también los volúmenes estimados pero no registrados, salvo indicación en contrario. Las cifras corresponden al volumen sólido de madera rolliza sin corteza.

| | |
|---|---|
| CONIFERAS (madera blandas) | Todas las maderas procedentes de árboles clasificados botánicamente como Gimnospermas; por ejemplo, abeto (<i>Abies</i>), pino de Paraná (<i>Araucaria</i>), cedro (<i>Cedrus</i>), ginkgo (<i>Ginkgo</i>), alerce (<i>Larix</i>), picea (<i>Picea</i>), pino (<i>Pinus</i>) incluso el llorón del Himalaya y el longifolio. |
| FRONDOSAS (no coníferas, maderas duras) | Todas las maderas procedentes de árboles clasificados botánicamente como Angiospermas; por ejemplo, arce (<i>Acer</i>), aliso (<i>Alnus</i>), ébano (<i>Diospyros</i>), haya (<i>Fagus</i>), guayacán (<i>Guaiacum</i>), chopo (<i>Populus</i>), roble (<i>Quercus</i>), sal (<i>Shorea</i>), teca (<i>Tectona</i>), casuarina (<i>Casuarina</i>), etc. |
| PRODUCCION | Se indica la producción total de artículos primarios aun cuando una parte pueda ser empleada inmediatamente en la producción de otro artículo como, por ejemplo, la pulpa de madera que puede transformarse inmediatamente en papel como parte de un proceso continuo. |
| IMPORTACIONES | Productos importados para el consumo interno o para ser transformados en el país. No se incluyen las cantidades "en tránsito"; en algunos casos se incluyen las cantidades destinadas a ser reexportadas en las importaciones. |
| EXPORTACIONES | Todas las cantidades de origen o fabricación nacional expedidas fuera del país. Por las razones indicadas anteriormente en el epígrafe Importaciones, se incluyen aquí las reexportaciones, excluyéndose las expediciones "en tránsito". |

PRODUCTOS

(C.U.C.I.)

| | |
|---|--|
| CARTON (641. parte) | Término generalmente aplicado a todos los tipos de material fibroso con un espesor de 0,3 mm o más, hechos con una máquina para cartón. Este término se aplica también a otros productos más delgados que en la fabricación y aplicación se clasifican más bien entre los cartones que entre los papeles. Como ejemplos de cartón tenemos los siguientes: el cartón de pulpa de madera, el cartón fieltro, los cartones duplex, triplex y múltiplex, los cartones pergamino, los cartones compuestos, los cartones acanalados, los cartones barnizados o impregnados, etc. |
| CHAPAS (631.1) | Hojas delgadas de madera de espesor uniforme, obtenidas por desenrollado, a la plana o por aserrío, que se emplean en la fabricación de contrachapeados, construcciones laminadas, muebles, envases enchapados, etc. |
| DURMIENTES O TRAVIESAS DE FERROCARRIL (243.1) | Piezas de madera de sección más o menos rectangular que se colocan transversalmente sobre el balasto para sostener los rieles. Las traviesas pueden trabajarse a sierra o a hacha. |
| LEÑA (241.1) | La madera destinada a ser quemada para cocina, calefacción, producción de energía, etc. Incluye la madera para carboneras de foso y hornos portátiles y puede incluir leñas de troncos y de ramas. En las cifras correspondientes al comercio se incluye también el aserrín. |
| LEÑA PARA CARBON | El volumen sólido de madera utilizada en la producción de carbón vegetal, incluido en leña. |
| MADERA ASERRADA (243.2/3) | Incluye la madera simplemente aserrada al hilo (por ejemplo: tablones, vigas, viguetas, tablas, tablijas, cabrios, cuarterones, listones, etc.); madera cepillada; machihembrada; ranurada; rebajada; moldurada; ensamblada en V; rebordeada; etc. Incluyendo las tablas para cajones, excluyendo las traviesas aserradas. La producción incluye la madera aserrada tanto de rollos nacionales como importados. |

(C.U.C.I.)

| | |
|---|---|
| MADERA EN ROLLO | Toda madera antes de la elaboración primaria, pero incluyendo la madera de raja, la leña y la madera para pulpa. Ejemplo: leña, trozas de aserrío, trozas para chapas, trozas para durmientes o traviesas de ferrocarril, madera para pulpa, puntales para minas, postes, pilotes y postes de alambrado. |
| MADERA INDUSTRIAL | Comprende la siguiente madera rolliza: trozas para aserrío; trozas para chapas; trozas para traviesas; madera para pulpa; puntales para minas y otras maderas industriales. |
| MADERA PARA PULPA | Las maderas para la fabricación de pastas celulósicas por procedimientos mecánicos (p.e. desfibrado) o por procedimientos químicos o semiquímicos, y las maderas para la fabricación de tableros de fibra y de tableros de partículas. Las maderas para pasta pueden descortezarse o no y se sirven en rollo (rollizos) o como madera de raja, residuos de las operaciones de corta, troceado y extracción, e industriales. También se aplica la denominación a las astillas o partículas de madera. |
| MADERA TERCIADE (CONTRACHAPEADOS) (631.2) | Este término comprende <i>madera chapada</i> , <i>madera contrachapada</i> (<i>terciada</i> o <i>multilaminar</i>) y <i>tablero enlistonado</i> así como <i>panel de madera celular</i> . La <i>madera chapada</i> es madera en chapas o paneles en que una delgada capa de madera va encolada a presión con una base, por lo común de calidad inferior. La <i>madera contrachapada</i> , <i>terciada</i> o <i>multilaminar</i> consta de tres o más láminas de madera encoladas o prensadas una con otra, por lo general dispuestas de modo que el grano de una capa forme ángulo con el de la capa sucesiva. El <i>tablero enlistonado</i> o <i>entablillado</i> (<i>de alma enlistonada</i> o <i>laminar</i>) consta de un alma gruesa compuesta de tarugos, listones o tabloncillos de madera encolados entre sí y revestidos de chapas exteriores cuyo grano es perpendicular al del alma. Los <i>paneles de madera celular</i> (que pueden estar o no revestidos de metal ordinario) presentan un aspecto algo semejante al de los tableros enlistonados o entablillados, pero los listones o tablillas que forman el alma están espaciados unos de otros, bien paralelamente, bien formando enrejado. Estos paneles pueden estar constituidos por chapas de revestimiento (paneles de madera maciza, contrachapeada u otros) separadas por una armazón interna en los bordes solamente, y en los intersticios pueden estar rellenos de materiales de aislamiento acústico o termoestables. |
| OTRAS CLASES DE PAPEL (641. parte) | Todas las clases de papel – salvo el papel para periódicos, el papel de imprenta y el papel de escribir – en rollos o en hojas. Por ejemplo: papel para cigarrillos, papel filtro, papel de cartel, papel de seda, papel kraft, papel de pared, papel acanalado, rizado, abollonado o perforado, etc. |
| OTRAS MADERAS INDUSTRIALES | Madera en rollo para curtir, destilación, cerillas, gasógenos, postes, pilotes, etc. |
| PAPEL DE IMPRENTA Y DE ESCRIBIR (641.2) | Excluye el papel para periódicos y manufacturas, tales como papelería de escritorio, libros, etc. |
| PAPEL PARA PERIODICOS (641.1) | Papel de imprimir, blanqueado, no encolado o poco encolado, no "couché", del tipo que se emplea generalmente para periódicos; peso entre 45 y 60 gramos por metro cuadrado, con generalmente al menos 70% del peso en material fibroso obtenido de la pulpa mecánica. |
| PILOTES (242.9, parte) | Piezas largas y rectas, obtenidas de troncos de árboles, que se destinan generalmente a ser hincadas en el suelo. Se usan sobre todo en los trabajos de construcción de obras portuarias y como soportes para puentes y edificios. |
| POSTES (242.9, parte) | Piezas rectas de madera, de más de tres metros de longitud, que se obtienen del tronco de los árboles. Se utilizan principalmente para sostener líneas de transmisión telefónica, telegráfica o eléctrica y para andamiajes. En ciertas regiones se pueden utilizar postes de diversas dimensiones en la construcción de viviendas. |

(C. U. C. I.)

| | |
|---|--|
| POSTES DE ALAMBRADO (242.9, parte) | Rollizos: desbastados, escuadrados o rajados, generalmente de menos de tres metros de longitud, que se emplean para la construcción de cercas y el tendido de alambradas. |
| PULPA DE MADERA (251.2/6/7/8/9) | El material fibroso obtenido de la madera mediante procedimientos mecánicos o químicos, para ser después transformado en papel, cartón, láminas de fibra, u otros productos celulósicos. Los datos corresponden al peso del material secado al aire e incluyen la pulpa producida como producto intermedio en las fábricas papeleras integradas. |
| PULPA DE MADERA AL SULFATO Y A LA SOSA (251.7) | Pasta de madera preparada mediante un proceso de cocimiento alcalino, en que la lejía utilizada para el tratamiento contiene una mezcla de hidróxido de sodio y sulfuro de sodio (método al sulfato), o bien sólo hidróxido de sodio (método a la sosa). Incluye las pastas al sulfato filtradas. |
| PULPA DE MADERA AL SULFITO (251.8) | Pasta preparada mediante tratamiento por ácidos. La lejía utilizada en el procedimiento al sulfito es una solución acuosa de ácido sulfuroso en el que se ha disuelto cal o alguna otra base. Puede ser blanqueada o sin blanquear. Incluye las pastas al sulfito filtradas. |
| PULPA DE MADERA SOLUBLE (CELULOSA PARA RAYON) (251.6) | Calidades especiales de pasta química blanqueada (al sulfito y al sulfato) con un alto contenido de alfa-celulosa, apropiada para ser transformada en rayón, celofán, laca y otros usos especiales que no sean la fabricación del papel. |
| PULPA DE MADERA SEMIQUIMICA (251.9) | Las pastas de madera en que las fibras se desprenden sin dañarlas materialmente, por medio de una secuencia de operaciones químicas y mecánicas, y en que cada uno de estos tratamientos no es por sí solo lo suficientemente enérgico como para provocar el desfibrado. (Se incluyen las pastas mecano-químicas.) |
| PULPA MECANICA DE MADERA (251.2) | Pasta obtenida de la madera por desintegración mecánica. Incluye las pastas de fibras desintegradas y las pastas desfibradas, así como las pastas filtradas. |
| PULPA DE OTRAS FIBRAS (251.5) | Incluye las pastas (con excepción de la obtenida de la madera) obtenidas de materiales fibrosos tales como paja, bagazo, algodón, lino, bambú, esparto y otras gramíneas utilizadas en la fabricación de papel, cartón y láminas de fibra. |
| PUNTALES PARA MINAS (242.4) | Toda madera rolliza empleada en minería. La madera de mina aserrada se incluye bajo el epígrafe "madera aserrada". |
| TABLEROS DE FIBRA (641.6) | Material en lámina fabricado con fibras de madera u otros elementos lignocelulósicos, utilizándose como ligazón natural la disposición de las fibras y las propiedades de cohesión que poseen. Durante el proceso de fabricación pueden incorporarse aglutinantes u otros materiales con el propósito de aumentar la dureza del tablero, su resistencia a la humedad, el fuego, los insectos o la pudrición, o mejorar cualquiera otra de sus cualidades. (Se excluyen otros productos similares fabricados con partículas de madera u otros materiales lignocelulósicos, o con polvo de madera y aglutinantes, así como tableros de yeso o cualquier otra materia de origen mineral.) |
| Tableros de fibra no prensados (tableros aislantes) | Tableros de fibra con una densidad de $0,40 \text{ g./cm}^3$ (25 lb. por pie cúbico) o menos. |
| Tableros de fibra prensados | Tableros de fibra con una densidad de más de $0,40 \text{ g./cm}^3$ (25 lb. por pie cúbico). Comprende los tableros semiduros; duros y extraduros en sus diversas definiciones. |

(C.U.C.I.)

TABLEROS DE MADERA
AGLOMERADA
(631.4 (2))

Material en lámina fabricado con partículas de madera u otras materias lignocelulósicas (por ejemplo, astillas, hojuelas, virutas, etc.) aglomeradas por medio de un aglutinante orgánico y uno o más de los agentes que se mencionan a continuación: calor, presión, humedad, un catalizador, etc. (Se excluyen los tableros de lana de madera u otros tipos de madera aglomerada, con aglutinantes inorgánicos.)

TROZAS PARA ASERRAR, PARA
CHAPAS Y PARA DURMIENTES
O TRAVIESAS DE FERROCA-
RRIL (242.2/3)

Volumen sólido (sin corteza) de los rollos para aserrío y fabricación de traviesas y de chapas. Se incluye también la madera desbastada a hacha (con excepción de las traviesas trabajadas a hacha) y la madera en rollo para la fabricación de duelas de tonelería y tejamaniles.

TROZAS PARA CHAPAS

(Véase la definición de: trozas para aserrar y trozas para durmientes o traviesas de ferrocarril.)

II. STANDARD GENERAL CONVERSION FACTORS *

(provisional)

A. — GENERAL MEASURES

TABLE 1. — Standard Units

| | | |
|----------|--|---|
| LENGTH | 1 centimetre = 0.3937 in. | 1 inch = 2.540 cm. |
| | 1 metre = 3.281 ft. | 1 foot = 0.3048 m. |
| | 1 metre = 1.094 yd. | 1 yard = 0.9144 m. |
| | 1 kilometre = 0.621 mile | 1 mile = 1.609 km. |
| | 1 yard = 3 feet = 36 inches | 1 mile = 1,760 yards = 5,280 feet |
| AREA | 1 cm ² = 0.155 sq. in. | 1 sq. in. = 6.452 cm ² |
| | 1 m ² = 10.76 sq. ft. | 1 sq. ft. = 0.0929 m ² |
| | 1 m ² = 1.19599 sq. yd. | 1 sq. yd. = 0.83613 m ² |
| | 1 km ² = 0.3861 sq. mile | 1 sq. mile = 2.59 km ² |
| | 1 hectare = 0.003861 sq. mile | 1 sq. mile = 259 ha. |
| | 1 hectare = 2.471 acres | 1 acre = 0.4047 ha. |
| | 1 square kilometre = 100 hectares | 1 square mile = 640 acres |
| VOLUME | 1 cm ³ = 0.061 cu. in. | 1 cu. in. = 16.39 cm ³ |
| | 1 m ³ = 35.31 cu. ft. | 1 cu. ft. = 0.02832 m ³ |
| | 1 litre = 61 cu. in. | 1 cu. in. = 0.01639 litre |
| | 1 litre = 0.2642 gal. (U.S.) | 1 gal. (U.S.) = 3.785 litres |
| | 1 litre = 0.2200 gal. (Imp.) | 1 gal. (Imp.) = 4.546 litres |
| | 1 litre = 1,000 cm ³ | 1 gallon = 4 quarts |
| MASS | 1 kilogramme = 2.205 pounds | 1 pound = 0.4536 kg. |
| | 1 metric ton = 1.102 short tons | 1 short ton = 0.9072 metric ton |
| | 1 metric ton = 0.9842 long tons | 1 long ton = 1.016 metric tons |
| | 1 metric ton = 19.684 cwt. (of 112 lbs) | 1 cwt. (of 112 lbs) = 0.0508 metric ton |
| | 1 metric ton = 22.046 cwt. (of 100 lbs) | 1 cwt. (of 100 lbs) = 0.04536 metric ton |
| | 1 metric ton = 10 quintals | 1 quintal = 0.1 metric ton |
| | | |
| PRESSURE | 1 kg. per m ² = 0.2048 lb. per sq. ft. | 1 lb. per sq. ft. = 4.882 kg. per m ² |
| | 1 gr. per cm ² = 0.0142 lb. per sq. in. | 1 lb. per sq. in. = 70.31 gr. per cm ² |
| DENSITY | 1 kg. per m ³ = 0.06243 lb. per cu. ft. | 1 lb. per cu. ft. = 16.02 kg. per m ³ |
| OTHER | 1 m ² /ha. = 4.356 sq. ft./acre | 1 sq. ft./acre = 0.2296 m ² /ha. |
| | 1 m ³ /ha. = 14.29 cu. ft./acre | 1 cu. ft./acre = 0.07 m ³ /ha. |

B. — FOREST PRODUCTS MEASURES

TABLE 2. — Weights

Average weight at shipment

| Product | Kilos per cubic metre | | | Pounds per cubic foot | | |
|--|-----------------------|------------|-------------|-----------------------|------------|-------------|
| | General | Coniferous | Broadleaved | General | Coniferous | Broadleaved |
| 1. Sawlogs, veneer logs and logs for sleepers: | | | | | | |
| Tropical | | 700 | | | 44 | |
| Other | | | 730 | | | 46 |
| 2. Pulpwood | 675 | 650 | 750 | 42 | 41 | 47 |
| 3. Pitprops | 725 | 700 | 800 | 45 | 44 | 50 |
| 4. Other industrial wood | 750 | 700 | 800 | 47 | 44 | 50 |
| 5. Fuelwood | 725 | 625 | 750 | 45 | 39 | 47 |
| 6. Sawnwood | | 550 | 700 | | 34 | 44 |
| 7. Sleepers | 780 | | | 49 | | |
| 8. Plywood | 650 | | | 41 | | |
| 9. Veneer sheets | 750 | | | 47 | | |
| 10. Fibreboard: compressed | 950 | | | 59 | | |
| non-compressed | 250 | | | 16 | | |
| 11. Particle board | 650 | | | 41 | | |

* Note: the conversion factors published in earlier volumes of the *Yearbook* have been extensively revised. Though at an advanced stage, however, this revision is not yet complete, accordingly, this list must be considered as provisional. For further information on this point, see Technical Notes (page XLII).

TABLE 3. — Roundwood

| Product and unit | Solid volume without bark | | | | | |
|--|---------------------------|------------|-------------|------------|------------|-------------|
| | Cubic metres | | | Cubic feet | | |
| | General | Coniferous | Broadleaved | General | Coniferous | Broadleaved |
| 1. General roundwood measures: | | | | | | |
| 1,000 board feet | 4.53 | | | 160 | | |
| 1,000 super feet | 36.05 | | | 1273 | | |
| 1,000 hoppus feet | | | | | | |
| Ton of 50 cubic feet (hoppus) | 1.805 | | | 63.7 | | |
| 2. Sawlogs, veneer logs and logs for sleepers: | | | | | | |

C. — ROUNDWOOD EQUIVALENTS

| Product | Unit | Roundwood equivalent | |
|----------------------------|-------------------|----------------------|------------|
| | | Cubic metres | Cubic feet |
| Charcoal | 1 metric ton | 6.0 | 212 |
| Coniferous sawnwood | 1 cubic metre (s) | 1.67 | 59 |
| Broadleaved sawnwood | » | 1.82 | 64 |
| Sleepers | 1 cubic metre | 1.82 | 64 |
| Plywood and blockboard | » | 2.3 | 81 |
| Veneer sheets | » | 1.9 | 67 |
| Particle board | 1 metric ton | 2.0 | 71 |
| Fibreboard | » | 2.0 | 71 |
| Woodpulp: | | | |
| Mechanical | » | 2.5 | 88 |
| Chemical: | » | 4.9 | 173 |
| Sulphite | » | 4.9 | 173 |
| Sulphate | » | 4.8 | 169 |
| Dissolving | » | 5.5 | 194 |
| Semi-chemical | » | 3.3 | 117 |
| Newsprint | » | 2.8 | 99 |
| Printing and writing paper | » | 3.5 | 124 |
| Other paper | » | 3.25 | 115 |
| Paperboard | » | 1.6 | 56 |

II. COEFFICIENTS DE CONVERSION GÉNÉRAUX TYPES *

(provisoires)

A. — MESURES GÉNÉRALES

TABLEAU 1. — Unités usuelles

| | | |
|------------|--|---|
| LONGUEUR | 1 centimètre = 0,3937 pouce | 1 pouce = 2,540 cm |
| | 1 mètre = 3,281 pieds | 1 pied = 0,3048 m |
| | 1 mètre = 1,094 yard | 1 yard = 0,9144 m |
| | 1 kilomètre = 0,621 mille | 1 mille = 1,609 km |
| | 1 yard = 3 pieds = 36 pouces | 1 mille = 1.760 yards = 5.280 pieds |
| SUPERFICIE | 1 cm ² = 0,155 pouce carré | 1 pouce carré = 6,452 cm ² |
| | 1 m ² = 10,76 pieds carrés | 1 pied carré = 0,0929 m ² |
| | 1 m ² = 1,19599 yard carré | 1 yard carré = 0,83613 m ² |
| | 1 km ² = 0,3861 mille carré | 1 mille carré = 2,59 km ² |
| | 1 hectare = 0,003861 mille carré | 1 mille carré = 259 ha |
| | 1 hectare = 2,471 acres | 1 acre = 0,4047 ha |
| | 1 kilomètre carré = 100 hectares | 1 mille carré = 640 acres |
| VOLUME | 1 cm ³ = 0,061 pouce cube | 1 pouce cube = 16,39 cm ³ |
| | 1 m ³ = 35,31 pieds cubes | 1 pied cube = 0,02832 m ³ |
| | 1 litre = 61 pouces cubes | 1 pouce cube = 0,01639 litre |
| | 1 litre = 0,2642 gallon (E.-U.) | 1 gallon (E.-U.) = 3,785 litres |
| | 1 litre = 0,2200 gallon (Imp.) | 1 gallon (Imp.) = 4,546 litres |
| | 1 litre = 1.000 cm ³ | 1 gallon = 4 quarts |
| MASSE | 1 kg = 2,205 livres (lb) | 1 livre (lb) = 0,4536 kg |
| | 1 tonne métrique = 1,102 tonne courte | 1 tonne courte = 0,9072 tonne métr. |
| | 1 tonne métrique = 0,9842 tonne longue | 1 tonne longue = 1,016 tonne métr. |
| | 1 tonne métrique = 19,684 cwt (de 112 livres) | 1 cwt (de 112 livres) = 0,0508 tonne métr. |
| | 1 tonne métrique = 22,046 cwt (de 100 livres) | 1 cwt (de 100 livres) = 0,04536 tonne métr. |
| | 1 tonne métrique = 10 quintaux | 1 quintal = 0,1 tonne métrique |
| PRESSION | 1 kg par m ² = 0,2048 livre par pied carré | 1 livre par pied carré = 4,882 kg par m ² |
| | 1 g par cm ² = 0,0142 livre par pouce carré | 1 livre par pouce carré = 70,31 g par cm ² |
| DENSITÉ | 1 kg par m ³ = 0,06243 livre par pied cube | 1 livre par pied cube = 16,02 kg par m ³ |
| RAPPORTS | 1 m ² /ha = 4,356 pieds carrés/acre | 1 pied carré/acre = 0,2296 m ² /ha |
| | 1 m ³ /ha = 14,29 pieds cubes/acre | 1 pied cube/acre = 0,07 m ³ /ha |

* Note: les coefficients de conversion publiés dans les volumes antérieurs de l'Annuaire ont fait l'objet d'une profonde révision. Cette révision quoique à un stade avancé, doit être considérée comme provisoire. Pour de plus amples précisions à ce sujet voir les Notes techniques (page XLV).

B. — MESURES POUR LES PRODUITS FORESTIERS

TABLEAU 2. — Poids

Poids moyen à l'expédition

| Produits | Kilos par mètre cube | | | Livres par pied cube | | |
|--|----------------------|-----------|----------|----------------------|-----------|----------|
| | Général | Conifères | Feuillus | Général | Conifères | Feuillus |
| 1. Grumes de sciage, de placage et pour traverses: | | | | | | |
| Tropicales | | 700 | | | 44 | |

II. COEFICIENTES GENERALES TIPOS DE CONVERSIÓN *

(provisionales)

A. — MEDIDAS GENERALES

CUADRO 1. — Unidades standard

| | | |
|------------|---|---|
| LONGITUD | 1 centímetro = 0,3937 pulgada | 1 pulgada = 2,540 cm. |
| | 1 metro = 3,281 pies | 1 pie = 0,3048 m. |
| | 1 metro = 1,094 yardas | 1 yarda = 0,9144 m. |
| | 1 kilómetro = 0,621 milla | 1 milla = 1,609 km. |
| | 1 yarda = 3 pies = 36 pulgadas | 1 milla = 1,760 yardas = 5,280 pies |
| SUPERFICIE | 1 cm ² = 0,155 pulgada cuadrada | 1 pulgada cuadrada = 6,452 cm ² |
| | 1 m ² = 10,76 pies cuadrados | 1 pie cuadrado = 0,0929 m ² |
| | 1 m ² = 1,19599 yarda cuadrada | 1 yarda cuadrada = 0,83613 m ² |
| | 1 km ² = 0,3861 milla cuadrada | 1 milla cuadrada = 2,59 km ² |
| | 1 hectárea = 0,003861 milla cuadrada | 1 milla cuadrada = 259 hect. |
| | 1 hectárea = 2,471 acres | 1 acre = 0,4047 hect. |
| | 1 kilómetro cuadrado = 100 hectáreas | 1 milla cuadrada = 640 acres |
| VOLUMEN | 1 cm ³ = 0,061 pulgada cúbica | 1 pulgada cúbica = 16,39 cm ³ |
| | 1 m ³ = 35,31 pies cúbicos | 1 pie cúbico = 0,02832 m ³ |
| | 1 litro = 61 pulgadas cúbicas | 1 pulgada cúbica = 0,01639 litro |
| | 1 litro = 0,2642 galones | 1 galón (Estados Unidos) = 3,785 litros |
| | 1 litro = 0,2200 galones | 1 galón (Imperial) = 4,546 litros |
| | | (Estados Unidos) (Imperiales) |
| | 1 litro = 1,000 cm ³ | |
| PESO | 1 kilogramo = 2,205 libras | 1 libra = 0,4536 kg. |
| | 1 tonelada métrica = 1,102 toneladas cortas | 1 tonelada corta = 0,9072 tonelada métrica |
| | 1 tonelada métrica = 0,9842 tonelada larga | 1 tonelada larga = 1,016 toneladas métricas |
| | 1 tonelada métrica = 19,684 cwt. (de 112 libras) | 1 cwt (de 112 libras) = 0,0508 tonelada métrica |
| | 1 tonelada métrica = 22,406 cwt. (de 100 libras) | 1 cwt (de 100 libras) = 0,04536 tonelada métrica |
| | 1 tonelada métrica = 10 quintales | 1 quintal = 0,1 tonelada métrica |
| PRESIÓN | 1 kg. por m ² = 0,2048 libra por pie cuadrado | 1 libra por pie cuadrado = 4,882 kg. por m ² |
| | 1 gramo por cm ² = 0,0142 lb. por pulgada cuadrada | 1 libra por pulgada cuadrada = 70,31 gramos por cm ² |
| DENSIDAD | 1 kg. por m ³ = 0,06243 lb. por pie cúbico | 1 libra por pie cúbico = 16,02 kg. por m ³ |
| OTRAS | 1 m ² /hect. = 4,356 pies cuadrados por acre | 1 pie cuadrado por acre = 0,2296 m ² /hect. |
| | 1 m ³ /hect. = 14,29 pies cúbicos por acre | 1 pie cúbico por acre = 0,07 m ³ /hect. |

* Nota: Los coeficientes de conversión publicados en anteriores volúmenes del *Anuario* han sido ampliamente revisados. No obstante, aunque muy avanzada, dicha revisión debe considerarse como provisional. Para más extensa información sobre dicho propósito véanse las Notas Técnicas (página XLVII).

B. — MEDIDAS DE LOS PRODUCTOS FORESTALES

CUADRO 2. — Pesos

Peso medio al embarque

| Producto | Kilos por metro cúbico | | | Libras por pie cúbico | | |
|--|------------------------|-----------|--------------|-----------------------|-----------|--------------|
| | General | Coníferas | No coníferas | General | Coníferas | No coníferas |
| 1. Trozas para aserrar, para chapas y para durmientes: | | 700 | | | 44 | |
| Tropicales | | | 730 | | | 46 |
| Otras | | | 800 | | | 50 |
| 2. Madera para pulpa | 675 | 650 | 750 | 42 | 41 | 47 |
| 3. Puntales para minas | 725 | 700 | 800 | 45 | 44 | 50 |
| 4. Otras maderas industriales | 750 | 700 | 800 | 47 | 44 | 50 |
| 5. Leña | 725 | 625 | 750 | 45 | 39 | 47 |
| 6. Madera aserrada | | 550 | 700 | | 34 | 44 |
| 7. Durmientes | 780 | | | 49 | | |
| 8. Madera terciada | 650 | | | 41 | | |
| 9. Chapas | 750 | | | 47 | | |
| 10. Tableros de fibra: prensados | 950 | | | 59 | | |
| no prensados | 250 | | | 16 | | |
| 11. Tableros de madera aglomerada | 650 | | | 41 | | |

CUADRO 3. — Madera rolliza

| Producto y unidad | Volumen sólido sin corteza | | | | | |
|--|----------------------------|-----------|--------------|--------------|-----------|--------------|
| | Metros cúbicos | | | Pies cúbicos | | |
| | General | Coníferas | No coníferas | General | Coníferas | No coníferas |
| 1. Medidas generales de madera rolliza: | | | | | | |
| 1.000 pies madereros | 4,53 | | | 160 | | |
| 1.000 super feet | 36,05 | | | 1273 | | |
| 1.000 hoppus feet | | | | | | |
| Tonelada de 50 pies cúbicos (hoppus) | 1,805 | | | 63,7 | | |
| 2. Trozas para aserrar, para chapas y para durmientes: | | | | | | |
| 1 tonelada métrica | | 1,43 | | | 50,5 | |
| Tropicales 1 » » | | | 1,37 | | | 48,4 |
| Otras 1 » » | | | 1,25 | | | 44,1 |
| 3. Madera para pulpa: | | | | | | |
| 1 tonelada métrica | 1,48 | 1,54 | 1,33 | 52,2 | 54,4 | 47 |
| 1 estéreo | 0,72 | | | 25,4 | | |
| 1 cuerda | 2,55 | | | 90 | | |
| 4. Puntales para minas: | | | | | | |
| 1 tonelada métrica | 1,38 | 1,43 | 1,25 | 48,7 | 50,5 | 44,1 |
| 1 fathom (pie cúbico hacinado) | 4,28 | | | 151,1 | | |
| 1 cuerda | 2,416 | | | 85,3 | | |
| 5. Otras maderas industriales: | | | | | | |
| 1 tonelada métrica | 1,33 | 1,43 | 1,25 | 47 | 50,5 | 44,1 |
| Postes de mangrove: 1 pieza | | | 0,004 | | | 0,14 |
| 6. Leña: | | | | | | |
| 1 tonelada métrica | 1,38 | 1,60 | 1,33 | 48,7 | 56,5 | 47 |
| 1 estéreo | 0,65 | 0,70 | 0,65 | 23 | 24,7 | 23 |
| 1 cuerda | 2,12 | | | 74,9 | | |
| 1.000 pies cúbicos hacinados | 18,41 | | | 650 | | |

CUADRO 4. — Madera manufacturada

| Producto | Unidad | Volumen sólido | | | | |
|-----------------------------------|--------------------------------|----------------------|----------------|----------------------|-----------|-------|
| | | Metros cúbicos | Pies cúbicos | 1.000 pies madereros | Standards | |
| 1. Madera aserrada: | Metro cúbico | 1 | 35,31 | 0,424 | 0,214 | |
