# FISH FOR THE FUTURE

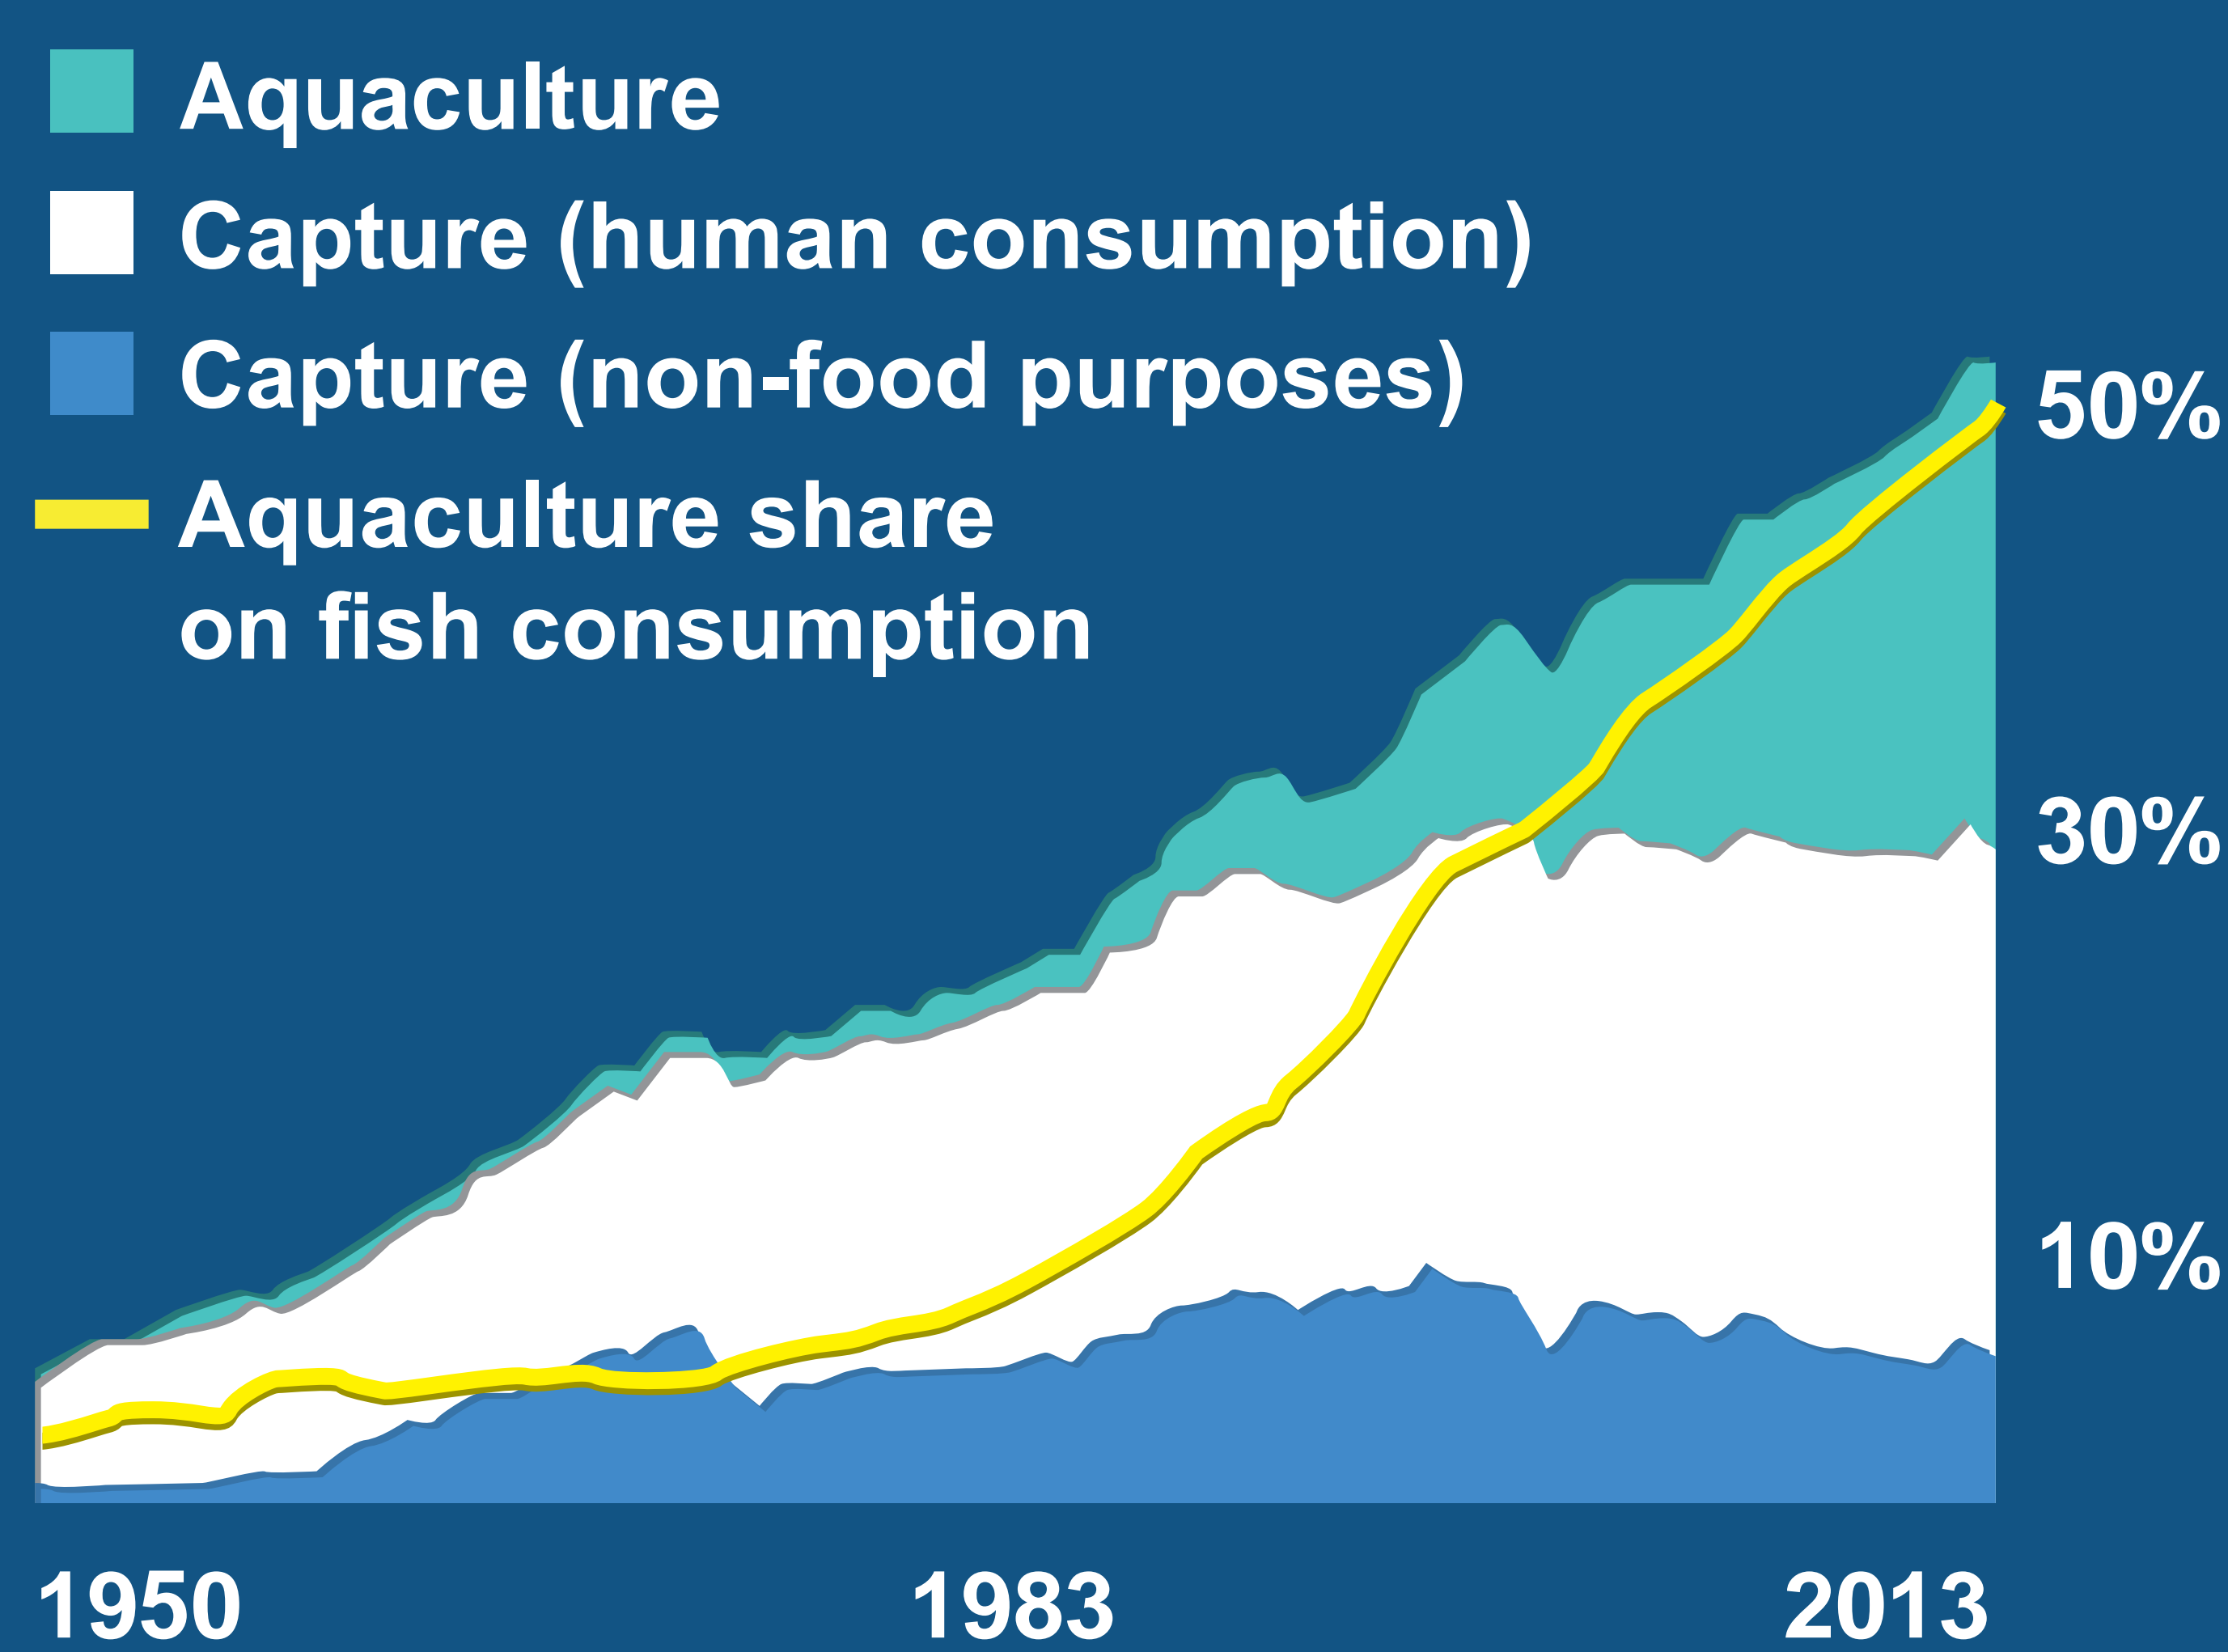

The world faces an increasing demand for food

## 50%

of the fish we eat today comes from aquaculture

Aquaculture is the fastest growing food producing sector in the world

Of 141 million tonnes of fish consumed in 2013, over 70 million tonnes were farmed

We will require an additional 50 million tonnes of fish to feed the world population by 2030

Additional fish production has to come from aquaculture as capture fisheries production is static
